Silver.

Silver has been depressed and lost all of the rally recorded last week. The renewed decline is apparently due to bearish feeling engendered by the threatened famine in India and, perhaps, speculative liquidation on the political outlook here. The situation in India, and its effect on silver, is discussed elsewhere in this issue of BRADSTREET'S. The decline in London was from 30 1/16d. per ounce to 29 13/16d., New York prices following the market abroad with a decline from 65¼c. to 64¾c. for commercial bars. Transactions in bullion certificates here amounted to 162,000 ounces, at a decline from 65⅝ to 65, and a rally to 65¾ on Friday.

Foreign Exchange.

The market this week has been decidedly firm in spite of dullness and of high rates for money. The supply of commercial bills diminished and the lack of inquiry from commercial remitters was supplied by a class of buyers whose object seemed to be to hold sterling in lieu of purchasing gold. Early in the week there also appeared to be some covering of contracts by importers of gold. It may be remarked, in addition, that the market for exchange was affected by the hardening of rates in London, and the apparent efforts of the Bank of England to tighten them, as well as by the nervous feeling that shows itself abroad regarding the outcome of our political contest.

Under these circumstances posted rates have been unchanged at 4.82@4.85½, while actual business in demand sterling has been strong at 4.84½@4.84¾, though on Monday there was a temporary decline to 4.84¼@4.84½, on a somewhat better supply of commercial bills. This, however, did not last, and on Thursday the market was firmer at the top figure, 4.84¾, in the face of the higher rates for money. Long sterling was a little easier on the tightening of money in London, but finally hardened in sympathy with demand as well as on an investment demand for this class of bills. Francs were firmer on a better inquiry of the kind last described. Friday's market was irregular. While sight bills were firm at 4.84½@4.84¾ for regular delivery transactions for immediate cash were made at as low as 4.83½@4.83¾, this being due to the condition of the money market.

The advance in the market put an end to gold-importing arrangements on any large scale, though during the week the Bank of England sold £250,000 in United States gold coin, and some small amounts may have been taken in the open market there. The actual gold arrivals here during the week were $9,050,000, and about $5,000,000 is still due this week.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Oct. 24.	*Oct.* 26.	*Oct.* 27.	*Oct.* 28.	*Oct.* 29.	*Oct.* 30.
4.82 @ 4.85½	4.82 @ 4.85½	4.82 @ 4.85½	4.82 @ 4.85½	4.82 @ 4.85½	4.82 @ 4.85½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.84½ @ 4.84¾	4.84¼ @ 4.84½	4.84⅜ @ 4.84½	4.84½ @ 4.84¾	4.84¾ @ 4.84¾	4.84½ @ 4.84¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.81¼ @ 4.81½	4.81¼ @ 4.81¼	4.81¼ @ 4.81½	4.81½ @ 4.81½	4.81½ @ 4.81¾	4.81½ @ 4.81¾

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.85; commercial bills, 4.80; francs, 5.22½@5.20; reichsmarks, 94⅞@95⅛.

The Bank of England discount rate was left unchanged on Thursday at 4 per cent. The bank for the week gained £82,000 specie, and its reserve was 53.10 per cent. of the liability, as compared with 50.35 per cent. last week. In the open market at London discount has been 3¼@3½ per cent., and call loans advanced from 2½ per cent. to 2½@3 per cent. in consequence of the fortnightly settlement on the Stock Exchange. A feature of the week was the refusal of the Bank of England to make short loans at less than 4 per cent. Both the stock and money markets at London were nervous over somewhat distorted views of the political situation here, but Americans were strong on Friday, a premium being paid for options over the election.

The imports of dry goods and merchandise at the port of New York this week were valued at $8,198,018, against $6,148,735 last week and $10,376,968 in the corresponding week of last year. Since January 1 $374,938,509, against $431,860,425 in the corresponding period of last year.

The exports (exclusive of specie) from New York to foreign ports for the week ending October 27 were $556,028 below those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$8,040,417	$6,559,028
Previously reported	308,551,872	276,726,376
Since January 1	$316,592,289	$283,285,404

THE STOCK MARKETS.

The New York Stock Market.

The condition of the money market has been a dominating factor in stock speculation this week. It cannot be said that Wall street at large entertains any doubts as to the defeat of the free-silver cause next Tuesday. Nevertheless, the large interests in the street seem to have taken a conservative attitude and are unwilling to encourage any extended bull speculation on the eve of an event with such far-reaching consequences. The banking community is imbued with the same ideas, though at the close of the week the fear of decided disturbance brought about concerted action by the banks, and supplies of money from this source, though only put out at top rates, relieved the fears of the market and caused prices to rally. The foreign markets have shown nervousness over the outlook here. London has been regaled with contradictory reports of the political probabilities in this country, some of them coming from sources friendly to free silver, notably the views of Mr. Moreton Frewen, the English bimetallist, who is now in Chicago, and whose communications, published in the London *Times*, are described as having considerable effect. The whole London stock market is waiting, and American stocks were depressed, while foreign representatives sold here to some extent, although on Friday there was a decidedly better feeling there and an improvement in quotations for our stocks. The money markets abroad are firm, and the Bank of England, while it did not advance its rate, has shown a disposition to keep the open market firm. Foreign exchange has been high at 4.84½@4.84¾, under investment demands by people who adopt this method of having gold values in hand, and gold imports have ceased, while of some $9,000,000 gold that arrived from abroad only $500,000 was turned into the Treasury, and the government gold, under small withdrawals, has fallen day by day to $118,200,000.

The hardening of the money market at first produced little effect on stock values. Purchases based on the belief in a sound money victory continued on Monday and prices advanced on buying of a rather general character and poor quality. On Tuesday the calling in of loans became more general, and as it is virtually impossible to obtain time money till after election, all the borrowing for stock market purposes was confined to money on call. Rates accordingly advanced to 8@10 per cent., and commission houses apprehending a squeeze discouraged purchases and closed out weak long accounts. The bears also were active and had the assistance of a temporary break caused by an unfounded report that our relations with Spain in connection with the Cuban revolt were approaching a crisis. Wednesday brought with it further hardening of money and increased the tendency to liquidate long holdings, while the news that the free-silver candidate was attracting large crowds on his electioneering visit to Chicago served to unsettle the feeling on the political outlook. The money market's stringency became only more acute on Thursday, the firmness being increased by the disposition to seek accommodation by loans running till Monday or Wednesday next, and by the necessary calling of loans in preparation for the November interest disbursements on Monday. The call loan market started at 10 per cent., and at the end of the day was quoted as high as 100 per cent. There was no decided pressure to sell stocks except that caused by liquidation by commission houses or timid holders, though the disposition to keep out of the market preceding the election was a general one, and prices suffered accordingly. On Friday, however, the market responded promptly to the freer lending by the banks, though the rates were stiff at ¼ per cent. commission, and legal interest for loans running to next Monday. Shorts covered extensively, and people who had determined to wait till after the election seem to have taken back their holdings, the market closing firm at about the highest level.

There have been few features of any moment outside of the general tendencies above referred to. The renewed upward movement of wheat was favorably regarded, but had little effect in the face of the stringency of money. Nor does the restoration of rates by the western roads have its due weight at present. Burlington, after rising to 76¼ fell to 72⅝, and St. Paul went from 73⅜ to 69⅜, both stocks regaining their declines on Friday. The principal speculation, however, was in Sugar, which declined from 115 to 110⅝, rallying to 115½. Chicago Gas was somewhat of a feature. The stock declined in the general liquidation to 66⅞, but rallied on Thursday in the face of the high money rates on the news that the court orders which prevented the payment of dividends had been modified, and closed at 70½ on Friday.

Boston Stock Market.

The tone has been fairly steady, and the price of railroad shares closes a trifle easier. Atchison has been quiet at ⅞ decline, and Chicago, Burlington & Quincy ¼ lower at the close. New York, New Haven & Hartford Railroad has advanced ⅜, and West End Railroad has gone off 1 point. Boston & Montana closes 3¼ lower. Sugar, under heavy trading, closes 1⅜ higher than last week. Bay State Gas has advanced 7/16.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending

* Pittsburgh.

A COMMERCIAL CALM.

TRADERS GENERALLY CONFINING THEMSELVES TO PURCHASES OF IMMEDIATE WANTS UNTIL AFTER ELECTION.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, October 30.—General business continues moderate in nearly all departments of the merchandise market, but as the election draws near the feeling is more hopeful. The money market is feeling the effects of uncertainty, and rates are firmer, with the call moderate. Some time loans on choice collateral are made at 6 per cent., but the general asking rate for business paper is 7@9 per cent. For call loans about 6 per cent. is noted, the excitement in New York not having reached here as yet. The boot and shoe market is firm at the advance and some business for spring is being placed, although the tendency is to hold off until after the election. Leather is firm and costing higher, with a moderate demand. Hides are scarce and very firm under a quiet demand.

Philadelphia, October 30.—The approaching election absorbs attention, and no disposition is manifested to buy or sell. Wool is flat, and little or nothing is doing in dry goods. The supply of leather is liberal, but demand very light. Boots and shoes fairly active. Coal shows fair activity, incident to the season. Iron continues quiet, with slightly weaker tendencies, buyers holding off.

Pittsburgh, October 20.—During the past week there has been a steady demand for staples. Orders sent in, while not large, are satisfactory. Continued complaints are heard as to collections, which is the worst feature of trade. A further advance has been made in the price of iron, and the market is firm at present quotations. There has been a number of large sales, and the market in a general way is looked upon as being in better shape than for some time.

Buffalo, October 30.—Trade in general has been more quiet, which is usual during the week preceding election. The waiting attitude seems to prevail.

Baltimore, October 30.—All classes of trade feel the effect of the near approach of the election, and business is virtually at a standstill. A great many of the leading houses here feel assured of the success of the sound money issue, which would mean a prompt revival of business.

West and Northwest.

Cleveland, October 30.—The general trade situation is practically unchanged from conditions ruling throughout October. A general improvement is looked for in November.

Cincinnati, October 30.—Business is poor. Collections bad.

Detroit, October 30.—The general situation is without change. Orders are restricted to immediate wants. Collections continue only fairly satisfactory.

Chicago, October 30. —Considering that the country is stirred up over the coming election, business this week has been fair, with excellent prospects of an improvement next week, providing sound money wins. A good many orders are coming in contingent upon its success. Dry goods jobbers report a fair improvement, there being more mail orders received. There is also a fair call for clothing, boots and shoes, and seasonable goods in general. Groceries are taken liberally, and prices show no change. Tanners report more inquiry for leather, and the market is firm on calfskins, but buyers are slow to pay the 10 per cent. advance asked. Light and heavy hardware are moving well, and there is a tendency to stiffen prices. Orders for steel are limited, and manufacturers report a dull week. There is a fair call for pig iron at previous figures. Parties in the trade here who have made a canvass of the stocks all over the country estimate them at 2,200,000 tons, which is considered excessive. Lumber is active, and coarse grades of white pine are held firmer. Butter, eggs and potatoes have declined on increased arrivals. Wool receipts, 1,470,120 pounds. Bids have been made for round lots at 8 per cent. Grain men and packers are the largest borrowers. Collections are good, so that merchants are enabled to get along without any assistance from the banks.

Louisville, October 30.—All branches of trade, especially those including staples, continue fairly active, notwithstanding the unsettled political condition. Little is doing in leaf tobacco, and offerings are of such a character as to hardly test prices, but the tone of the market has slightly improved over the past few weeks. Collections are fair.

St. Louis, October 30.—The volume of general trade even in staples is naturally only fair and mainly of the mail order character, but it is up to expectations. The feeling is prevalent among a large majority of manufacturers and jobbers that the political horizon will shortly be cleared for the immediate return of prosperity. The hide market is easier. Some concessions are reported. Harness leather is in increased demand. Orders for pig iron are small and for quick delivery. Dried fruits and canned goods are moving freely at advancing values. Iron and steel bars are unchanged, but higher prices are expected next week. Tinplates are dull. Receipts and shipments of lumber are larger. The demand for money is moderate, bankers as heretofore being conservative and rates nominally unchanged.

Kansas City, October 30.—There is no improvement in the business situation, either wholesale or retail. Collections are easier.

Milwaukee, October 30.—All branches of business are quiet, business demands being confined to immediate wants. Collections continue slow.

St. Paul, October 30.—Some few dealers report a fair trade, but this is believed to be mostly sorting-up orders. Trade is dull this week, and no particular activity is looked for until after election. Collections continue good.

Duluth, October 30.—The waiting disposition on the part of business generally becomes more marked as election day approaches. Staples are moving in fair volume, though in most lines not up to last year. Collections are fairly satisfactory. Lumber is quiet. Flour is moving with considerable freedom.

Omaha, October 30.—Trade is dull. Collections are fair.

Sioux Falls, October 30.—The movement of grain and live stock continues, with good seasonable retail trade, but wholesale purchasers are waiting. Collections are good.

Southern Cities.

Charleston, October 30.—A good trade is reported in groceries, both wholesale and retail. Boots, shoes and dry goods are quiet. Collections are somewhat slow.

Savannah, October 30.—Trade has fallen off. Collections are slow. Only change noted is in the naval stores market. There is a decrease in turpentine prices.

Atlanta, October 30.—Trade in general seems to be fair. Collections are a little off.

Augusta, October 30.—Trade is only fair, with purchases apparently only for immediate needs, due to the approaching election and changing markets.

Jacksonville, October 30.—There is a slight increase in city and county collections, and a better demand in wholesale groceries, produce and hardware. Retail trade is picking up.

Birmingham, October 30.—Trade is unchanged. Collections fair.

Chattanooga, October 30.—All business is suffering from interest being on the approaching election. Sales are light.

Memphis, October 30.—General trade is fair, especially in groceries and dry goods. Collections are fair.

Nashville, October 30.—Business for the week has run somewhat closer, and will remain quiet until after election. Very little trading is going on in real estate and securities.

New Orleans, October 30.—Trade is very good, considering the natural interference of the election season. Rice receipts are selling promptly. All trade is largely hampered, if not restricted, by the conservatism of money lenders. Bankers are endeavoring to accommodate legitimate trade at 8 per cent.; higher rates are not asked, but the market has hardened considerably this week. The opening of the Stuyvesant docks, a new terminal of the Illinois Central, marks a new era in our export and import trade with the Mississippi valley and northwest.

Galveston, October 30.—Wholesalers complain of a quiet trade generally, and report country merchants buying cautiously, and they only staples. Collections continue fairly good, owing to the free movement of cotton.

Pacific Coast.

San Francisco, October 30.—Commercial lines are unchanged. Wheat has advanced a few points. Wheat freights are weak at 26s. The produce and fruit markets are dull. Collections are slow. A cargo of wheat was shipped to Calcutta on the 27th instant, making the third from this port.

Portland, October 30.—Receipts of wheat from farmers have fallen off a good deal, but hops are being freely sold, and the price is improving. Other lines of business are depressed, owing principally to the proximity of the election. Collections, as a whole, are not as good as last week.

Seattle, October 30.—Trade has been good, considering the interference consequent on elections. Rising prices are having a stimulating effect. Wheat receipts are very large, and the first foreign cargo is nearly completed. A vice-consul for China has been appointed at this port.

Tacoma, October 30.—General trade is fair. The lumber trade quite active. A local firm has sent an agent to the Sandwich Islands and to Australia to open branches. A steamer left this week with flour and lumber for South America and a steamer is under charter to load wheat for Calcutta, India.

Canada.

Toronto, October 30.—Trade in wholesale departments is fairly active. There is an improved demand for winter goods and prices generally rule strong. A large quantity of fleece wool has been shipped to the United States. Collections are fair.

Montreal, October 30.—Business is moderately active in all lines. Groceries and sugars seem most active, with advances in the latter and a tendency toward higher figures. Owing to the approach of the close of navigation and the advance in rail rates on the 2d instant there has been special activity in rushing orders through. Quebec City and the eastern portion of the province report a better tone, with increased activity and better remittances.

Halifax, October 30.—There has been a fair volume of trade during the week, and most of the leading lines show an improvement over the corresponding month of last year. There is considerable activity in the fish market, and large shipments of apples continue to be made. Heavy stocks of fruits are held, and prices rule extremely low. The arrival of vessels with Prince Edward Island produce has not been large. St. John, N. B., reports dry fish a little firmer. Shipments of lumber are falling off on account of high freights. Owing to the failure of the fishery much destitution prevails on the Labrador coast, and a protracted spell of bad weather in Newfoundland has seriously interfered with the handling of fish.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM OCTOBER 17, 1896, TO OCTOBER 23, 1896, INCLUSIVE.

Dry Goods.

With better weather retail distribution has increased, which has helped business with jobbers. The result of the election will have great influence on this trade, hence the general tendency is to wait until after next week. Cotton fabrics show a firm position, but asking prices continue below the parity of raw cotton, and the situation is yet unsatisfactory to manufacturers. Printed fabrics are meeting with a steady trade, flannelettes and outings going well. Staple ginghams are steady, but fancies are dull. The movement in dress woolens is quiet, and as yet agents have booked only moderate orders for spring. Men's-wear woolens are quiet, but a better business is looked for. Mostly cheap stuff ordered thus far, but higher-cost fabrics are attracting more attention.

Wool.

The tone of the market is firm, on the strength of expected success of sound money principles and protection. The tendency shown is to hold prices very firm, even higher than last week. Fine medium and fine territories are quoted at 30@31c. scoured, with choice staple lots 1@2c. higher. Manufacturers are more disposed to buy, and are bidding up close, on quite large lines. Many lots of consigned wools have been withdrawn from the market pending the election. Fleece wools are held firm and move slowly. There is more call for Australian wools, and sales are larger, with full prices obtained. Cables from Melbourne say that the decline noted in that market at the opening of the sale has been recovered, and values are firm on a par with last year. Carpet wools are firm, with more selling of late.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

AMERICAN COMPETITION WITH GREAT BRITAIN.

The London *Iron and Steel Trades Journal* says: "The merchants and manufacturers of the United States have entered into competition with England, Germany and Belgium for the sale of steel rails. As we have already noticed in the *Journal*, a firm of London merchants has placed in America an order for 11,000 tons of steel rails, and the Americans boast other large orders, of which a considerable part is for Japan. The price of one contract is stated at £3 10s., and freight 22s., making the total cost, at a Japanese port, only £4 12s. It is expected that a further order of 6,000 tons will also go to the United States. We recapitulate these items, because they must be borne in mind in any consideration of the probabilities of further competition.

"Can the United States produce steel rails with a profit at the above price? Can the makers and merchants permanently rely on having their rails carried to Japan for 22s. per ton? We think that the answer to both these inquiries must be in the negative. In the first place, the price is lower than has ever been accepted in England, and yet wages are higher in the United States. It has been asserted that the higher wages may be counterbalanced by the low cost of iron ore in Alabama; but this, again, is neutralized by the fact that the ore has to be carried many hundreds of miles to the blast-furnaces. Again, it is admitted that the low freights cannot be expected to continue, in view of the fact that there is a large demand for vessels to carry grain and cotton to Europe. The average freight between England and Japan is about 40s. But if the trade at such prices can only be carried on at a loss, why should it be carried on at all? The answer is that, owing to the poverty of the railway companies in the United States and the want of confidence caused by the presidential election, the demand for rails for home consumption in the United States has fallen to a very low ebb, and the railmakers must either take orders at any price they can get or close their works. But this cannot go on forever. Constant working at a loss means at last enforced suspension of work by bankruptcy.

"The largest merchants and manufacturers in Great Britain admit that the competition has come upon them by surprise. They argue that if the United States can only keep its internal trade by customs duties varying from 20 to 50 per cent., and if its wages are on a higher scale than ours, it is impossible for them to continue competing with us for the export trade. It is contended that the sales at low prices by the United States are probably made at a loss, but that in the present unsettled state of the currency and the lamentable position

of the rail manufacturers with regard to the internal consumption of rails by the United States, sales must be made, and especially to countries from which they can get return freights. This opinion we find generally adopted, with the addition that a change for the better may take place if Mr. Bryan fails to obtain election as President. Advices from the most reliable sources in the United States tend to show that the majority of the trading community is with McKinley and the maintenance of the gold standard. Confidence is returning, and higher prices are being asked on numerous commodities where deliveries extend into the coming year. Both manufacturers and merchants are confident that the elections will settle the silver question for some time to come, and that the reaction will bring a higher level of values in the United States. Already on this side we are hearing less of American offerings, and in some instances, where contracts have been negotiated at low rates, American sellers have hurriedly canceled their offers."

THE SPANISH SILK INDUSTRY.

M. Pellegrin, French consul at Valencia, "says that the east and southeast of Spain are, properly speaking, the only parts of the peninsula where the silk cultivation and industry have attained anything approaching a high degree of development. The yield of cocoons in 1895 amounted to 1,200,000 kilograms as compared with 1,100,000 kilograms in 1894. The cultivation of silk and its derivatives are contemporaneous with the domination of the Arabs, who introduced it from Asia Minor. Favored by an extremely favorable climate, this description of production soon began to constitute the chief wealth of the provinces of Valencia, Castellon and Teruel. The transformation of the cocoon into silk remained for a long time, in a certain sense, a home industry, as the breeder of the worms himself attended to it. Using for this purpose the most primitive of apparatus, the result was defective. The initiative of modernizing the silk-spinning industry in Spain is due to a Frenchman, a native of Forey, M. J. Louis Dupuy de Lome. In 1835 M. Dupuy de Lome established at Valencia the first steam-spinning machinery, and the product was highly appreciated on the Lyons market. It was not long before his example was followed by other French and Spanish manufacturers, and about 1860 there were erected 22 steam spinneries at Valencia, 2 in the province of Teruel, and 1 in the province of Castellon. These 25 establishments produced annually about 150-000 kilograms of silk, which were exported to France and entirely absorbed by the French weaving establishments. During the same period, the peasants spun about 50,000 kilograms annually, according to the Arabian methods. Such was the position about the year 1860, when the disease of the silkworms which had devastated the French worms made its appearance in Spain, and the production of cocoons rapidly fell off, and to add to the misfortunes, while in France and Italy scientists studied the scourge and devoted themselves to the consideration of the means of checking it, Valencian sericulturists contented themselves with plucking up their mulberry trees. The silk weaving industry is a very ancient one, but it has remained stationary in Spain, very few improvements having been effected in it. Moreover, it supports itself with difficulty in spite of the very heavy customs duties with which foreign silk tissues are burdened on their importation into the country. The plant is defective and labor is relatively dear in the interior of Valencia, where from 1,000 to 2,000 looms are at work. A certain number of these are grouped in factories, and these factories, generally situated in the outskirts of the town, are devoted almost exclusively to the manufacture of foulards and in turning out damasks, surahs, velvets, satins, etc., but all these articles have only a moderate value for two reasons—one being that the raw material used is composed almost exclusively of Asiatic silk of low price, and the working leaves much to be desired. In the provinces of Teruel and Castellon, silk weaving remains in a very rudimentary condition, and the only articles produced appear to be bolting cloths. In conclusion M. Pellegrin says that the textile industry in Valencia is in a very precarious condition, and no efforts appear to be made in order to improve it, while capitalists seem to shun it. In all probability it will be many years before the silk weavers will succeed in turning out high-class goods, as they prefer rather to devote themselves to the cheaper classes of ordinary wearing apparel, the consequence of this being that the province must remain dependent upon Lyons and St. Etienne for rich silk stuffs, ribbons, laces and passementerie. There is no doubt that a very valuable market for French silks would be established in Spain if only commercial arrangements could be concluded, whereby some reduction would be made in the present exorbitant and almost prohibitive customs duties with which French silks are now burdened on their importation into that country."

JAPAN AS A COMMERCIAL RIVAL.

A correspondent of the London *Times*, resident in Japan, says that "as a result of paragraphs in the papers describing the extraordinary cheapness of Japanese imitations of European goods—such as felt hats for a few cents and bicycles costing as many dollars as English machines cost in pounds—merchants in Japan have been deluged with inquiries, and have had to explain that the goods are altogether unsuited to the European or American market; that the hats would be unsalable; that the woven stuffs, when durability was taken into consideration, were no cheaper than home productions, and that no self-respecting Teuton, Gaul or Anglo-Saxon would ride a bicycle 'made in Japan.' Such a bicycle is constructed in a blacksmith's shop, mainly by hand, and is more closely related to the antique 'bone-shaker' than to the modern 'safety.' There are only four bicycle workshops of any importance, the total output not exceeding 500 machines per annum. So-called pneumatic-tyre bicycles cost from £11 to £17, while the English manufacturer can place bicycles on the market at from £12 to £20, with which those of primitive Japanese workmanship are not to be compared.

"As regards the manufacture of yarn the circumstances are different. Imports of yarn, both from England and from India, have fallen off very considerably. But Japan has purchased large quantities of machinery from England, so that the volume of imports has actually increased. Japanese spinning mills undersell Lancashire and Bombay in the home markets simply because of contiguity to the field of distribution. It does not by any means follow that Japan will become a powerful competitor in foreign trade. So long as she does not make her own machinery or grow her own cotton she will not secure control even of contiguous China markets.

"The question then arises, Is Japan likely, in course of time, to make her own machinery? So far as machines of delicate and complicated construction—such as those used in spinning—are concerned, I should reply, certainly, not in the immediate future, and it is very doubtful if her competition in this field need be feared at any time. In the first place, Japan is not a country rich in minerals, and apprehension is already expressed that at the present rate of consumption her easily accessible coal, which even now is no cheaper than coal at the pit mouth in England, will quickly be exhausted, and that it will be necessary to sink deeper shafts with consequent increase in cost of production. Almost all the iron used in Japanese manufactures comes from Europe. It is worth repeating that no nation which has to depend on others both for its machinery and for its raw material is likely to be a successful competitor in the field of industrial production. Japan is not a newly-discovered country with immense virgin resources. Wood is the fuel mainly used, and timber has been almost the sole material in the construction of temples, palaces, castles or huts, with the result that the forests have almost disappeared. Imported Oregon pine is now cheaper than Japanese woods of similar quality, and an important trade in timber is growing up between Japan and America. The steady rise in timber means a corresponding increase in the cost of living. And this brings us to the question of cheap labor. There are those having experience who deny that labor in Japan is cheap, as it requires at least three persons to do the work done by one in England. But wages are very low. The wages of mill hands, mostly women, range from 6 to 25 sen (say from 2d. to 8d.) per day. Since the war, however, labor has become increasingly difficult to obtain, and in some trades wages have more than doubled. The workers' position is in many cases miserable enough. Many mills are run night and day with only two shifts. A Japanese magazine recently warned manufacturers that if the position of the workers were not quickly improved socialism would take root among the people, and, as a matter of fact, the spinning-mills in Osaka have already had to face several strikes. As the laborers insist on a higher standard of comfort, wages must rise in proportion.

"As a matter of fact, instead of exports from Japan tending to exceed the imports into the country the reverse is the case. For the first few months of the current year, indeed, the imports show a vast excess, amounting to 26,433,883 yen. The imports have been swelled by the payment of the Chinese indemnity installments, while the exports are lower than usual, owing to a temporary diminution in the export of rice and silk. Exclusive of the movements of specie and bullion, the excess of imports over exports probably does not exceed 7,000,000 yen. But the general tendency of trade may be taken as showing that Japan is likely to be a good customer for many a year to come, and that there need be no immediate scare as regards her entrance into foreign markets. The imports from Great Britain for the first six months of this year were valued at 4,971,984 yen, and from British India at 2,203,968 yen, while imports from Germany amounted to only 1,096,062 yen, from the United States to 909,936 yen, and from France to 898,490 yen."

CANADA'S MINERAL RESOURCES.

The New York *Sun* says: "Intelligent persons on both sides of the border are growing daily more alive to the tremendous development which would be given to the natural capabilities of the Dominion of Canada through the voluntary union of that country with the United States. But, as yet, attention has been directed mainly to Canada's fisheries and forests, and to her vast expanse of fertile land adapted to the cultivation of cereals, especially of wheat and barley. The volume and variety of her mineral wealth have been by no means appreciated, and we are glad, therefore, to see some striking facts relating to this subject set forth in the October number of the London *National Review* by Mr. George M. Dawson, director of the Canadian Geological Survey.

"Premising that the value of the minerals produced in Canada in 1895 was over $22,500,000, Mr. Dawson begins his survey of the field offered for mining investment with a glance at British Columbia, which promises soon to yield from its mines more than the aggregate output of all the other provinces of the Dominion. It is well known that in 1857 placer or alluvial gold was discovered on the Thompson river, and there was an influx of miners thither; five years later nearly $4,000,000 in gold is computed to have been produced. But gradually the output decreased as the known tracts suited to the rude methods of work became exhausted. In recent years, however, since the requisite facilities for transport were secured, many mining camps have been established in West and East Kootenay on rich deposits of the yellow and white metals. The principal mining districts organized in West Kootenay are Nelson, Ainsworth, Slocan and Trail. The three first named yield copper and silver, besides silver-lead ores and some ores containing gold. The fourth district, Trail, offers the best prospects; its deposits of auriferous pyrrhotites are probably unique, the veins being of extraordinary dimensions and frequency; one of the towns, though but a few months old, has over 3,000 inhabitants. The aggregate yield of the West Kootenay mines last year was $2,100,000; for the first six months of the present year it has been more than $2,200,000. For the moment the large district of East Kootenay has been to some extent eclipsed, though here, too, many valuable deposits are being opened. Other important districts in the southern part of British Columbia are Boundary Creek, from which come ores containing tellurium, mixed with gold and silver, and in which immense beds of copper ores are found; Okanagan, noted chiefly for free-milling gold quartz; Similkameen, in which placer gold and platinum are being extracted, and Cayoosh Creek, which has veins of rich gold-bearing quartz. To the north, and as yet 200 miles distant from any railway, Cariboo, which formerly proved a rich find for the placer digger, has again come to the front as the site of extensive hydraulic mining operations. Dredging plants, also, of various types have been placed along much of the length of the Fraser river, which may be regarded as the great natural 'ground sluice' of the country, but of which the bed and deeper bars could never be reached by the early miners. Considering the whole of British Columbia in connection with the Yukon district of the Canadian Northwest Territory, we observe that they together constitute a section, 1,200 miles long, of the most important metalliferous region of the continent, that of the Cordillera or Rocky mountain belt. Mr. Dawson points out that this length is equal to that included in the United States from the 49th parallel to Mexico.

"Of the coal mines on the coast of British Columbia we need only say that they now produce about a million tons annually. There are new fields, ready to be opened when needed, not only on the coast, particularly in the Queen Charlotte islands, but also in the interior, as, for instance, in Crow's Nest pass and in Nicola valley. Leaving British Columbia and turning eastward we find that a great area in the district of Alberta is underlain with beds of coal or lignite. The amount of coal contained in only one of these beds, as measured by a known outcrop 66 miles long, and by an assumed easily workable depth, is estimated at 330,000,000 tons. Proceeding next to the mineral resources of the older eastern provinces we come, in western Ontario, on the nickeliferous pyrrhotites of Sudbury, already favorably known to metallurgists; the mines actually in operation fully supply the demand for nickel. The existence of gold-bearing quartz veins in the Huronian rocks of this province has been long known, and of late a few mining and milling plants have been established, chiefly on the shores of the Lake of the Woods. There are good grounds for believing that in the part of Ontario which lies west of Lake Superior might be founded an extensive and permanent gold industry, like that of Nova Scotia as regards the moderate value of the quartz, but on a much larger scale. A reference is also made by Mr. Dawson to the exceptionally rich deposits of silver near Thunder Bay, from which several million dollars' worth of the white metal have already been drawn. Of the southern or peninsular part of Ontario the principal mineral products are petroleum, salt, natural gas, gypsum and building materials of all kinds. Iron ores of excellent quality abound in many sections of Ontario and Quebec, and they would be mined and smelted in large quantities for export to the United States could they be admitted duty free. As regards asbestos (chrysolite) of the first quality, Quebec stands almost alone as a producer, and from a limited tract supplies the greater part of this material which is used in the arts.

"The facts marshalled by Mr. Dawson, of which we have here cited but a few, prove conclusively that Canada, were she linked with the United States, would offer in her mineral resources an almost limitless field for the intelligent utilization of capital."

DEVELOPMENT OF SOUTHERN COMMERCE.

The Baltimore *Journal of Commerce* says: "The growth of the commercial interests of southern ports is one of the most interesting phases of the trade movements of the country. This upbuilding of southern commerce is so intimately related to the advancement of the industrial interests of this section that its importance cannot be overstated, for it means a broader and more comprehensive development of every branch of manufacturing and mining. Pointing out some of the reasons why this export trade is tending to southern ports, the New Orleans *Times-Democrat* says:

The following table of comparison of mileage from western shipping points to New Orleans and New York makes interesting reading in connection with the information published in the *Times-Democrat* of how the southern railroads have won in the contest for Kansas City packing-house products:

	Miles	
From	*New York.*	*New Orleans.*
Chicago	912	912
St. Louis	1,066	766
Kansas City	1,343	866
Omaha	1,493	1,058
St. Paul	1,322	1,261

Commenting on this table, a Chicago paper says:

For ten years the Gould lines have been building branches having for their object the opening up of direct routes to the ports of New Orleans and Galveston. To-day the Gould interests control nearly 12,000 miles of railway in Nebraska, Kansas, Missouri, Indian Territory, Arkansas, Texas and Louisiana. In the case of a carload of corn originating, say, at Kansas City, would the Gould lines willingly haul it 288 miles over the Missouri Pacific to St. Louis, to be turned over to a Joint Traffic Association line for export via an Atlantic port, or would they prefer to haul the shipment on their own rails to tidewater at New Orleans or Galveston, and receive revenue for about 960 miles, as against the short haul of 288 miles?

It is an established fact that ocean rates to Liverpool and continental ports can be maintained from New Orleans on the same basis as from New York, Baltimore and Newport News. It is admitted by those familiar with the situation that the Gould lines and the Illinois Central, reaching the gulf from the north, are physically able to do good work in the way of train service at as low a cost as any of the existing single-track lines running to the east from Chicago. The cost of hauling such freight is proportionately less per ton per mile for an 860-mile haul to reach a gulf port as against a 1,000 or 1,400-mile haul to reach the Atlantic seaboard. The table of distances shown in this article shows the advantage which New Orleans has in nearness to some of the principal western cities as compared to New York. As you go west of the Missouri river the advantage increases for a short haul to tidewater at New Orleans and Galveston, until at some points these gulf ports have an advantage of 700 or 800 miles less rail haul to the east direct through Chicago.

It will thus be seen that the Joint Traffic Association has an important competitor in the gulf lines. The past eight months' record of grain shipments from the west shows conclusively that the competition has been felt.

COAST DEFENSE WORK.

The engineer and ordnance departments of the army are very busily engaged in their preparations for the execution of the legislation of the last Congress looking to the improvement and strengthening of the fortifications and coast defenses of the country. The plans for these important works, which mean so much to the future welfare and security of the United States, have been formulated, and in most instances the approved projects are under encouraging headway. The appropriation of $12,000,000 made by the last Congress has been allotted so as to accomplish the greatest good with the means and facilities at hand. A big slice of the appropriation will be devoted to the protection of New York and San Francisco, as the most important ports on the Atlantic and Pacific coasts, respectively, and the remainder has been allotted to the principal exposed ports along the two coast lines.

The national capital has received a liberal share of the appropriation for its protection, to be devoted mainly to the establishment of modern batteries and other means of defense of the most effective character at Fort Washington. Gen. Craighill, chief of engineers, is exercising a personal supervision over the work in progress at this point. He goes down there about once a week.

Although the general plan for the defense of the United States was approved several months ago it is deemed wise and prudent to keep the main details an official secret. One reason for this is the natural desire to keep foreign countries in ignorance of the precise character and strength of the various fortifications which are designed to discourage all attempts at invasion or territorial encroachment.

Large contracts, involving the expenditure of five or six million dollars, are to be awarded soon for the furnishing of gun forgings, the manufacture of a number of rifles under private contract and the purchase of material with which to begin the preparation of the various sites for the batteries determined upon. Land for the emplacements in the majority of cases has already been purchased, and where it has not condemnatory proceedings are being taken to secure it.

It is quite certain that all the larger fortifications will include in their armament a number of 16-inch rifles, by far the heaviest type of gun ever attempted in this country, and of which there are but few abroad. Recently the War Department has purchased forgings to begin a trial gun of this caliber, and if it proves successful twenty will be manufactured for the larger cities.

Gen. Craighill, who will direct the work of preparing the emplacements, refuses to discuss the question at all or to intimate the nature of the defenses. He believes that all questions of defenses should be guarded with rigid care in order to prevent foreign governments from securing information which none would think of permitting the United States to acquire abroad.

The construction of this great line of defenses, extending along the Atlantic seaboard from Portland to Jacksonville and around the gulf to New Orleans and Galveston, means a substantial increase in the standing army in a few years, and especially of the artillery branch, to which will fall the work of manning and caring for them.

Washington city will require three or four companies as a garrison at Fort Washington, and cities like Savannah, Charleston and New Orleans, where there are no artillery posts, will require the establishment of stations equipped with from two to four batteries each. This means that there will be a wide distribution of the artillery along the seaboard cities and new garrisons established at points which have not known the presence of federal troops since the war period.

AMERICAN PIG IRON IN ENGLAND.

The Pittsburgh *American Manufacturer* says: "On several occasions during the past few months we have referred to the sales of American pig iron in England. We have always maintained that these sales were due more to business depression in this country than to our ability to secure a permanent place in the British market. *Industries and Iron*, of London, in a recent article on this subject, gives the details of the efforts made by American producers to establish a market in Great Britain. The article goes on to show how very dull trade is on this side, and gives the following account of the latest transaction:

Merchants representing American pig iron producers commenced to offer crude metal at prices which compare very favorably with those demanded by native producers. At first the imported metal was received somewhat skeptically by consumers, as both the deliveries and the quality of the iron were considered to be too uncertain to satisfy the requirements on this side. Nothing daunted, however, American merchants have been persistent in their endeavors to open up a trade, and with object, have been offering pig iron to compete with Lincolnshire brands at the low basis rate of 38s. per ton delivered at Liverpool. The result is that the competition of American pig iron is becoming more of a reality in districts where it can be delivered at a low cost of carriage, and considerable purchases have been made recently, chiefly forge qualities, for use in the finished iron works in the Warrington and Wigan districts. Furthermore, the quality is reported to be satisfactory, and it is reported that one large firm of iron and steel merchants has recently imported about 10,000 tons of American pig iron.

"The journal quoted then very sensibly remarks that, notwithstanding this apparent success, British pig iron producers, who are at present exceedingly well employed, need have little fear of the competition becoming of a permanent nature. It expresses the opinion that this trade is undoubtedly due to the existing peculiar conditions of the iron trade in America, and to the fact that it has been possible to get the iron shipped across the Atlantic at practically ballast rates. As soon as trade takes a turn for the better in the United States, prices are certain to advance, and American pig iron will not seek foreign shores. Our contemporary, moreover, warns the American producers who are shipping their crude metal to England to act cautiously, otherwise they may find themselves with English contracts on their books, which will result in a dead loss. This warning, however, we believe to be unnecessary, for with returning prosperity our domestic iron producing capacity will be better employed, and our iron will not have to be sacrificed in the British market."

BUSINESS FAILURES.

THE WEEK'S FAILURES, UNITED STATES AND CANADA.

In the United States about 80 per cent. of the total number of concerns failing had $5,000 or less, and 15 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

Fine Book Binding

IN

Vellum, Crushed Levant, Morocco, etc.

RARE BOOKS, MSS. & PRINTS CLEANED, REPAIRED & INLAID.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.——1896.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 7, 1896.

Although it seemed clear to observers not violently biased by official relations to the late election that Mr. McKinley had been elected by a decisive majority in the electoral college as well as by an immense preponderance of the popular vote, the chairman of the opposition party insisted on claiming the election of Bryan until Thursday. He then became convinced of the fact that his candidate's cause was hopeless, and issued a statement conceding the election of McKinley. The issuance of this statement was followed by the sending of a congratulatory dispatch by Mr. Bryan to the successful candidate, which may be regarded as marking the formal close of the campaign. All that now remains to be done before the meeting of the electors is to make a few minor changes in the tables of the electoral votes. The changes seem likely to result in a slight increase in the vote which the returns up to date give to the sound money candidate.

Among the things made clear by the election is the fact that the country has not divided upon sectional lines. There has been no division between the east and the west such as was prophesied by some of the free silver advocates. Major McKinley has carried not only the eastern and middle states, but also those of the central-west, and the northwestern states of Iowa, Minnesota, North and South Dakota, and possibly Wyoming. He has also carried the Pacific coast states, with the exception of Washington, and has extended his gains toward the south so as to secure the electoral votes of Maryland, West Virginia and Kentucky, and to put Tennessee and North Carolina in the doubtful column for some days. Such a showing indicates clearly enough the unsectional character of the triumph that has been secured by the advocates of sound money. This is an outcome of the electoral contest that will be welcomed by patriotic citizens everywhere.

Now that the election is over, the question of most interest to thoughtful citizens concerns the probable future of the free coinage movement. It is true that the movement has been defeated for the present by the largest popular plurality recorded in our history, but that may not prevent the silver men from endeavoring to force the issue upon the country in the campaign four years hence. There can be no doubt, judging from the expressions that have fallen from leading members of the Silver and Populist parties proper, that they at least will make this effort. Whether this same policy will be followed by the portion of the Democratic party which supported or did not actively dissent from the Chicago platform, is the point of real interest, for upon the continuance of this alliance between these three sections of the Bryan party depends the question whether the issue will demand consideration as a factor of any seriousness in our politics. Pending the determination of this question, it will be the part of wisdom for the men who have followed the standard of sound money to minimize as far as possible the points of difference between them on other questions of policy.

For some time before the election the savings banks of the city of New York showed a marked excess of withdrawals over deposits. This was one of the indications of the lack of confidence which made itself felt among certain classes of the population. With the ascertainment of the result the situation underwent an immediate change. While Monday showed in many, if not most, of the savings institutions an excess of withdrawals, Wednesday exhibited a reversal of the current and a marked excess of deposits. In fact, some of the bank officials speak of the period since the election as furnishing the first favorable turn in a long and unsatisfactory period. Some of those withdrawing funds, it appears, did so with the idea of making money in case gold went to a premium as the result of a defeat for sound money, whereas among the noteworthy features of the week since the election has been the amount of deposits which have been made in gold, indicating both that there has been considerable hoarding of the yellow metal and that the hoarding has come to an end.

Among the gratifying results of the election locally has been the defeat of the forestry amendment in New York state, to which attention was called in our issue of last week. This amendment proposed to change the existing constitutional provision relating to the forests by apparently permitting the leasing or sale of the lands so long as they were not taken by corporations, and further authorizing the leasing of lands within the forest preserve for camp and cottage purposes. This amendment was denounced by the leading journals of the state, and by the principal bodies which have interested themselves in the preservation of the forests, on the ground that its adoption would result in the destruction of the state forests, and would constitute a retrograde step in the movement to safeguard the forests which has been slowly gaining strength during the past decade or more. But little attention seems to have been attracted to the subject, owing to the interest attaching to the monetary issue, but of those voting on it an emphatic majority has been recorded against it.

At the regular monthly meeting of the New York Chamber of Commerce, on Thursday, the committee on sound financial legislation presented a report giving an account of the work done by it in distributing sound-money literature in the campaign. The committee caused to be printed and distributed more than 60,000,000 pages of the best sound-money literature, and according to the report in the selection of speeches and other literature for distribution the committee endeavored to exclude all political questions not pertaining to the subject to which their attention was directed. The literature was sent singly to individual addresses, procured through correspondence, and not in bulk to political organizations, as the latter method frequently results in wasted effort, delay and failure to reach the individual voter. No particular section of the country received special attention in the prosecution of this educational work, except that the east was considered reasonably safe for sound money, and the efforts, therefore, were almost exclusively directed to the south and west. The Chamber commended by resolution the good work done by the committee, which certainly has been among the agencies contributing to the success of the sound money cause. The president of the Chamber, Mr. Orr, dwelt with emphasis upon the importance of the election just held to the maintenance of the institutions of the country, and declared that it meant more than any other election that has yet taken place in the range of American history.

One of the suggestions of the Chief of Ordnance which should receive hearty cooperation at the hands of all involved is that which relates to arming, equipping and increasing the efficiency of the state militia. This suggestion contemplates allowing the national guard of the several states to turn in their obsolete and unserviceable arms and receive their value in an appropriation, and the issue to them of Springfield rifles in place of old arms. This would give the militia some valuable service pattern supplies in exchange for practically useless material now in possession of the states. The time has come when there should be some approach to uniformity made in the equipment, and as far as possible the discipline of the forces which are to form the first reinforcement of the regular army. There exists no good reason for the use of different arms by the militia of the several states, and the system of discipline should be the same, so that the entire body of the defensive force of the country could be used as a single military arm.

Expenditures on account of the navy last year amounted to $26,262,155, of which $6,974,435 was paid for the construction of new ships, the other principal item of expenditure being $15,494,862 for maintenance of the establishment, of which $7,091,908 was required by the ships in commission. The cruiser New York was the most expensive vessel to run, costing $412,807 for the twelve months. The Columbia and Minneapolis consumed over $300,000 each; but when the big battle ships have been a year in operation they promise to exceed these figures. Over $11,000,000 worth of stores have been kept on hand with a great saving over the old system of indiscriminate purchases, corrected by Secretary Whitney. The naval clothing factory has to be considerably enlarged, owing to the growing demands upon it, all clothing being now made there for the navy, the revenue cutter service, and the naval militia. The estimated value of real estate improvements and machinery in the navy yards is placed at $60,000,000. During the year nearly $5,000,000 was paid for labor.

From a report on the operations of the railway mail service during the last fiscal year it appears that the expenditures for mail transportation, inland and foreign, was $49,523,932, an increase of over $1,500,000 over the previous year. Mail service to the gold regions of Alaska has been established for the benefit of miners and others there. The pneumatic tube service, which it was desired to establish in Philadelphia, New York and Boston, has not been developed as rapidly as it was hoped on account of the enormous expense. The permission of the bridge company has been obtained for the construction of a tube between the New York and Brooklyn post offices, crossing the Brooklyn bridge. The Boston matter is practically settled as far as the permission of the city council and other interested parties is concerned, and only awaits the signature of the mayor. It is also expected that a much greater pneumatic tube service is within the near reach of the department in New York City.

A VICTORY FOR SOUND MONEY.

The results of Tuesday's elections contained few elements of surprise. While some of the states are close, and some days may pass before the returns are finally collated, it is clear that Mr. McKinley has carried a sufficient number of states to give him a substantial majority in the electoral college. At the present writing he is credited with 277 electoral votes. At first the proportions of the victory were somewhat exaggerated, and later returns from states where the population is sparse and communication is difficult have tended to modify the first conclusions. The expectation that the sound-money candidate would carry the eastern, middle and middle-western states has been realized. Indiana, Illinois, Iowa, Minnesota and Michigan have taken their places with Massachusetts, New York, Pennsylvania and Ohio in the sound-money column. In the same column are to be found the Pacific coast states of California and Oregon and the states of Maryland and Kentucky, while the state of Wyoming is in doubt.

It seems likely that Mr. McKinley will have a very large plurality of the popular vote, seemingly the largest cast for any candidate in the history of the country. According to present indications it will aggregate something over 1,000,000. In the eastern and middle states the pluralities were phenomenal. New York contributed over 273,000, Pennsylvania over 296,000, Massachusetts about 164,000, New Jersey over 85,000, Illinois 144,000, Ohio 70,000, and so on. Some heavy totals are set down in the Bryan column, the heaviest being 126,000 in Colorado and 75,000 in Texas. On the whole, however, the pluralities obtained by the silver candidate are comparatively small.

Naturally, such a decided victory for the sound-money candidate would be reflected in a victory for that cause in the national legislature, and we find that the House, according to the latest reports, will be for sound money by a majority of perhaps 75. This is not quite so large as the majority in the present House, but, like Mercutio's wound, 'twill serve. The condition of things in the Senate is, of course, different. That body, on account of its constitution, is not immediately responsive to the drift of public sentiment, and the silver party has held the balance of power there for some time. There appears to be some ground for the hope, however, that the sound-money men may, as the result of Tuesday's election, find themselves in a majority. This outcome, however, depends upon the success of the sound-money legislative candidates in some of the close states, and it is too early yet to speak with any definiteness upon the question. A sound-money President and a sound-money House of Representatives furnish, however, a sufficient guarantee against any monetary legislation of a revolutionary kind.

As regards the result of the election as a whole, it may be said that it sets up a bar against the movement to debase the currency of the country which has been in course of development for over two decades, and compromises with which have only given it increased strength and boldness. The opportunity is now at hand, or almost within sight at least, for definitely settling the whole disturbing question about the country's monetary standard and for reforming our currency system so as to do away at least with some of the more pronounced difficulties which have followed in the wake of compromise. The election demonstrates further that the great majority of the people of the country are upholders of law and order, and still continue to be imbued with that spirit of conservatism which has done so much to render the greatest of democratic republics also the most successful exemplar of the possibilities of popular government. While that spirit survives, the permanence of the Republic is assured.

By no means the least gratifying outcome of the election is the demonstration that party spirit in the United States, while strong, as is naturally the case in a republic ruled through the agency of parties, is not blind, but at least among a sufficiently large body of men to constitute a balance of power is subordinated to considerations of patriotic duty. It was impulses of this kind which led large numbers of Democrats, including conspicuous leaders as well as members of the rank and file of the party, to throw aside party ties temporarily and vote to put the seal of their condemnation upon the revolutionary principles set forth in the Chicago platform. A spectacle such as has been presented in the campaign of 1896 precludes the harboring of pessimistic reflections. As has been happily said by Mr. McKinley, the people in their majesty, ignoring party lines, have consecrated themselves again to country, and baptised the cherished ordinances of free government with a new and holy patriotism.

THE EFFECT ON THE MONEY MARKET.

In no respect were the changes induced by the victory of sound money more immediate and significant than in the money market. Despite the prevalence of a belief that the free-silver candidate was doomed to defeat, the feeling of apprehension, of which the locking up of gold was a conspicuous manifestation, reached an acute state during the few days preceding the election. The preparation on every hand against a possible mischance in the outcome resulted in a feeling of conservatism which curtailed the supply of money, and created for a time decided pressure on the money market. The situation, so far as the Stock Exchange is concerned, was relieved by the action of a number of the New York banks on Friday of last week. This fact was referred to in the preceding issue of BRADSTREET'S, the course adopted by the so-called syndicate being to furnish the money absolutely needed by brokers in the form of call loans on stocks and bonds. At the same time it is understood that such funds as the syndicate considered it necessary to put out were only loaned at the highest rates, namely, ¼ per cent. commission and legal interest for the three days from Friday to Monday, and the two days from Monday to Wednesday. On this basis the rate per annum was equivalent to either 35 or — per cent. in the first case and about 50 per cent. in the latter. The whole situation of the money market represented, in fact, the culmination of the distrust created by the mere possibility that the country might go upon a silver basis even in advance of the inauguration of a President pledged to the free-silver platform.

The change in the situation on Wednesday is a measure of the relief from such fears. The rate for call loans promptly dropped to 6 per cent., and before the day ended money was freely offered at as low as 3½@4 per cent. The supply came from all quarters, and for the first time in weeks there was a relaxation of the absolute unwillingness to lend money on time or to employ it in the purchase of commercial paper, which had been one of the most unsettling features of the situation. It requires, of course, some little time for a situation of this kind to adjust itself, and even at the close of the week the markets for time loans and commercial paper are not entirely upon a normal basis. A complete recovery in this connection was probably retarded by the claims of the discomfited silver leaders and the reduction of the earlier estimates of the sound-money majority in the electoral college. The main fact, however, is that offerings of funds for both purposes have recommenced, and that the reappearance of buyers in various lines of wholesale trade causes a reassertion of the demand for accommodation, which had well nigh disappeared during the period of doubt and uncertainty. While 7@9 per cent. had been nominally quoted last week for prime indorsed paper in the market, with a scarcity of offerings and an utter lack of demand, the quoted figures dropped to 6 per cent., and the usual buyers, both here and from outside cities, are once more coming into the market.

One circumstance of considerable influence in immediately easing the money market has been the prompt release of a large portion of the gold that had been hoarded in anticipation of a national financial catastrophe. The total amount that had been withdrawn from the Treasury and the banks, or secured in the open market, cannot be estimated with accuracy. Taking, however, the reduction in the Treasury gold reserve and the gold brought here from Europe which did not go to the Treasury or appear in the bank returns, it is probable that over $50,000,000 of gold was held in this way. The movement was general. It was not confined to any class. A very considerable portion was taken by people of limited means, who were frightened into guarding their small savings in this way. For two months past the premium for gold has not varied much from ¼ per cent., and an enormous volume of business in it is known to have been done. One of the leading dealers at New York, it is stated, sold in a single day last week no less than $2,000,000 of gold over their counter in amounts which ran all the way from a few hundred up to large sums.

The tendency to release this specie has been prompt. On Wednesday morning the premium for gold disappeared as if by magic. Its only value was as current money, and the more intelligent holders made haste to employ it. The rush to the Treasury to exchange it for legal tenders was so great that the facilities of the Sub-Treasury at New York were inadequate, and Assistant Treasurer of the United States Jordan was forced to issue orders refusing to receive gold in exchange for greenbacks, there being no law compelling the Treasury to make such exchanges. This threw the weight of the outpour upon the banks, which as a matter of convenience to the public made in several instances such exchanges or took the proffered gold on deposit. The result would, it seems, be unquestionably a large increase in the specie holdings of the banks, which will to a certain extent appear in the statement of bank averages for the week to be issued by the New York Clearing House on Saturday. The savings banks here and elsewhere throughout the country have also participated to a marked extent in the return of the money taken out by timid depositors and hoarded in the form of gold.

The condition of the Treasury gold reserves demands attention. The highest point it reached under the large deposits of imported specie turned into the Treasury in exchange for legal tenders was $124,000,000. As the effect of the continued withdrawals in small individual amounts, this process being particularly active in the last two weeks prior to the election, the gold reserve fell to about $117,000,000. The official figures on Thursday of this week, indeed, made it the smaller sum of $114,900,000, though this did not take into account the sum of $2,000,000 or more in gold which was actually deposited with the government after Wednesday. As already pointed out, the Treasury showed no anxiety to accept the large amounts that were offered to it, and it is understood that the utmost confidence is entertained in official circles that there will, from this time on, be a steady and regular gain in the government gold holdings, some of the estimates being that they will ultimately rise to at least $200,000,000.

The foreign exchange market has also felt the influence of the changed situation to a decided degree. A large amount of sterling and continental exchange had been bought in the last few weeks, not by people who had remittances to make abroad or whose interests in foreign trade would have suggested such action, but by those who took this method of providing themselves with gold values. The demand of this kind was sufficient to account for the strength of exchange rates in the face of the absence of mercantile inquiry which the advance in money and the stagnation of importing trade involved. The first effect of the election on the exchange market was to release large amounts of this hoarded exchange, the actual rates for demand sterling on Wednesday breaking under such offerings to about 4.83. The rally that has followed in exchange is due to the relaxation of the tightness of money and the reappearance of an active demand from mercantile sources. This is also connected with the firmness of the London money market, where the Bank of England seems to be gradually getting control of the open market rates. It is claimed, indeed, that the institution in question is using its powers to stiffen the market, that it refuses rediscounts, and that it has even borrowed in the open market. The prevalent impression is that this policy is due to a fear of further heavy withdrawals of gold from London to the United States. This expectation is based upon the extreme probability of a revival of interest there in American stocks and the absorption by the British public of very large amounts of our securities. The best judges, indeed, consider that such a movement is inevitable. The extreme interest taken in the election by the financial and general public of Great Britain has been a feature of the week, and, though the demand for American stocks abroad has been held in partial check by the desire to await the full returns, there has already been a marked revival of activity and interest in the American market abroad. These factors may not develop immediately, but it is thought that with the favorable condition of our trade balance, supplemented as they may be by a considerable foreign absorption of our securities, the continuance of the movement of gold this way will be an element in enabling the money market to meet the demands of revived trade and increasing speculative activity.

MODERATE WHEAT SUPPLIES.

At a time when supplies of wheat in India, Russia, Argentine, Australia and the United States are not excessive, but in most instances short of recent annual averages, BRADSTREET'S monthly compilation of total available stocks of wheat in the United States, Canada, afloat for and in Europe, acquires special interest.

Total available stocks of wheat in the United States on November 1, 1896, with comparisons for like dates in preceding years, as reported to BRADSTREET'S, are as follows:

	East Rockies.	*Pacific coast.*	*Total U. S.*
November 1, 1896.....	76,716,000	6,883,000	83,599,000
November 1, 1895.....	75,598,000	9,651,000	85,249,000
November 1, 1894.....	105,874,000	12,008,000	117,882,000
November 1, 1893.....	83,265,000	7,760,000	91,025,000
November 1, 1892.....	78,624,000	8,714,000	87,339,000
November 1, 1891.....	50,524,000	12,752,000	63,277,000
November 1, 1890.....	37,938,000	7,571,000	45,510,000
November 1, 1889.....	46,947,000	9,370,000	56,317,000
November 1, 1888.....	44,518,000	5,936,000	50,455,000

The foregoing exhibit of domestic and Canadian available supplies acquires significance by contrast with corresponding totals one year and one month ago. On October 1, 1896, total stocks of available wheat, both coasts of the United States and Canada, amounted to 69,409,000 bushels, about 4,600,000 bushels more than was reported on October 1, 1895. On November 1, 1896, the corresponding aggregate was 83,599,000 bushels, or about 1,600,000 bushels less than on November 1, 1895, from which it will appear that whereas the heavy receipts of wheat one month ago, under the stimulus of advancing prices, resulted in larger visible supplies than at the corresponding period a year before, the situation has changed within the month. At present we find available supplies of wheat smaller than one year ago, reported receipts from farmers north and northwest checked, and, if the information and opinions of northwestern millers and elevator owners are to prove true, there will be very little wheat to be exported from this country after January 1. The check to shipments from producers' hands, and the decreased rate of increase in the available supply, notwithstanding the advance in prices, as shown in reports to BRADSTREET'S, together with the reported shortage of about 80,000,000 bushels in the spring wheat states, constitute a bullish influence not yet generally understood, and, for the time being, not fully appreciated.

Its significance is based on the affirmation of milling and elevator interests that investigations indicate an absolute shortage of 80,000,000 bushels in the spring wheat regions, and the loss of 25,000,000 bushels by bad weather after it had been raised. Interests referred to are willing to admit the wheat crop of the country may have been, and probably did, amount to 500,000,000 bushels in 1895, notwithstanding a government report in that year of 467,000,000 bushels. This, they argue, means a net yield of not to exceed 400,000,000 bushels this year. Of this, not more than 22,000,000 bushels would be available for export, the remainder being needed at home for food and for seed. The heaviest estimates of the quantity of wheat carried over on July 1 last place the proportion available for export at about 60,000,000 bushels, which, with the 22,000,000 bushels referred to, would furnish not more than 82,000,000 bushels altogether for export between July 1, 1896, and June 30, 1897. Of this quantity, 60,000,000 bushels have been already exported, either as wheat or flour, leaving not to exceed 22,000,000 bushels for export during the next eight months.

The total quantities of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantities afloat for Europe from all exporting countries, on November 1, added to available stocks in Europe, as reported to BRADSTREET'S, are as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
November 1, 1896.	76,716,000	6,883,000	53,976,000	137,575,000
November 1, 1895.	75,598,000	9,651,000	68,384,000	153,633,000
November 1, 1894.	105,874,000	12,008,000	60,800,000	178,682,000
November 1, 1893.	83,265,000	7,760,000	82,200,000	172,825,000
November 1, 1892.	78,624,000	8,714,000	66,928,000	154,272,000
November 1, 1891.	50,524,000	12,752,000	70,034,000	133,641,000
November 1, 1890.	37,938,000	7,571,000	45,640,000	91,151,000
November 1, 1889.	46,947,000	9,370,000	52,800,000	109,117,000

The preceding statistical exhibit adds to total supplies of wheat, already given, the quantities afloat for and in store in Europe on November 1, 1896, which show a grand total on November 1, 1896, about 16,000,000 bushels less than the corresponding total one year ago, 41,000,000 bushels less than on November 1, 1894, 35,000,000 bushels less than on November 1, 1893, and 17,000,000 bushels less than on the corresponding date in 1892. On November 1, 1891, the first of five to raise large crops of wheat, the world's available stocks of wheat, as reported to BRADSTREET'S, amounted to only 4,000,000 bushels less than at the present time. The increase in the European demand for wheat from the United States and elsewhere is shown by the gain in stocks afloat for and in Europe during October of nearly 10,000,000 bushels, while in October, 1895, the increase was about 4,000,000 bushels.

During four months ending October 31 the net increase in available stocks of wheat, United States and Canada, east of the Rocky mountains, is only 15,362,000 bushels, a decrease of one-third in the net gain in the corresponding period of 1895, and of two-thirds of the corresponding increase in 1894. The total net increases from July 1 to October 31 on the Pacific coast for four years have not varied materially, ranging from something more than 3,000,000 to nearly 5,000,000 bushels, the latter total being the gain during the past four months. Consolidating increases and decreases of available supplies on both coasts, the net gain during the past four months is found to be 20,318,000 bushels, compared with 25,041,000 bushels in the corresponding months of 1895, 44,379,000 bushels in 1894, 14,907,000 bushels in 1893, and with 51,679,000 bushels increase from July 1 to October 31, 1892.

The total October increase of available wheat supplies in the United States, Canada, afloat for Europe from all sources, and those in Europe, is 22,000,000 bushels, as compared with 24,000,000 bushels in October, 1895. The smaller increase in October this year gathers emphasis in view of the October advance in prices the world over, which called out supplies so much more rapidly than would otherwise have been the case. In October, 1892, as well as in 1891, the world's monthly increase in available wheat supplies was also 22,000,000, but in that month in 1894 it was only 16,000,000 bushels, and in 1893, 15,000,000 bushels.

TOTALS OF AVAILABLE WHEAT IN THE UNITED STATES, CANADA AND EUROPE AND AFLOAT FOR EUROPE.

* Decrease. † Increase.

THE STOCK MARKET AND THE ELECTION.

The response by the stock and bond market to the result of the election has been immediate, and, in a measure, gratifying. Professional interests in the street were no doubt inclined to discount the chances of a sound-money victory in advance. This spirit was particularly noticeable on the two days preceding the election, when purchasers of this class advanced quotations in the face of the stringency of money. In addition to this, the bear interest seems to have suspended operations, and last Saturday and Monday were marked by an absence of any pressure to sell stocks. Nevertheless, the public was out of the market. Outside holdings of a speculative character had, in fact, been steadily reduced, and the period of high money which set in just before the election completed the work. It is, indeed, more than probable that investors shared to some extent in the feeling of alarm, and that the concessions in prices of bonds were an indication that they, too, had liquidated in many instances. The marked feature of the change which has occurred since midnight on Tuesday last is that the general public is once more interested in the stock market. The buying of stocks this week has been largely for public account. The professionals have realized profits on their purchases effected prior to the election, and have even shown a tendency to work for a reaction and lower prices, but the ability of the market to sustain such sales has been shown in a marked degree, although temporary reactions have been produced. At the same time, the reappearance of the public in the market is thus far of necessity merely preliminary, and an extensive movement of the kind could scarcely develop without additional time. The change in speculative sentiment is, therefore, based on this, as well as on the immediate relaxation of the stringency that had prevailed in the money market and the favorable views which have been taken in the foreign financial markets of the effect of the sound-money triumph upon the standing and value of American securities.

The latter is one of the most important features of the existing situation. The press dispatches indicate that not only the intensity of the interest which the London market took in the election here, but the hearty feeling of satisfaction with the outcome which prevails, and the marked revival of an active interest in our securities that has followed. On last Wednesday London vied with New York in its excitement over the returns, and the decidedly bullish tone of the American market in that city was on a par with the reception of the favorable news by our own speculative public. The development of a wide speculation in Americans in that quarter is, however, necessarily far from being a rapid process, and some time may elapse before it assumes full headway.

The enthusiasm with which the New York market greeted the result of the balloting was, of course, a little too pronounced to be permanent. In some instances the highest prices of the week were made in the first few moments after the opening of the Stock Board on last Wednesday. The initial advances were met by the realizing of profits already referred to, and the fact that the subsequent news modified the early accounts as to the extent of the sound-money victory also had a conservative effect which need not be regarded as unfavorable, but rather as likely to have a healthy effect upon the future of speculation.

CLEARINGS FOR OCTOBER.

October bank clearings at sixty-seven cities aggregate $4,547,239,594, a gain of 24 per cent., or nearly one-quarter over the aggregate for September, but a decrease of 12.5 per cent. from October a year ago. Compared with October, 1894, the gain this

year is 6.9 per cent., and compared with October, 1893, the increase is 13 per cent. With the sole exception of January the October total is the largest reported in any month this year, and the gain shown in October this year over September fully equals the gain shown in October, 1895, over September, 1895. Compared with August, when clearings were at the lowest point of the year, the gain shown in the October total is 29 per cent.

The following table of percentages of increase and decrease during the first ten months of the past four years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 6.3	Dec. 36.9	Dec. 2.7

August	Dec. 14.2	Inc. 16.1	Inc. 5.9	Dec. 25.8
Eight months	Dec. 1.4	Inc. 16.2	Dec. 24.4	Dec. 4.2
September	Dec. 11.4	Inc. 18.4	Inc. 5.3	Dec. 30.7
Nine months	Dec. 2.5	Inc. 16.5	Dec. 22.4	Dec. 7.0
October	Dec. 12.5	Inc. 22.3	Inc. 6.3	Dec. 27.0
Ten months	Dec. 3.7	Inc. 17.4	Dec. 19.5	Dec. 9.0

The showings made by the various groups of clearing-house cities during October and the first ten months of the year compare with preceding months as follows:

	July, 1896.	*August*, 1896.	*Sept.*, 1896.	*October*, 1896.	*Ten mos.* 1896.
New Engl'd	Dec. 10.2	Dec. 18.6	Dec. 10.7	Dec. 12.6	Dec. 5.9
Middle	Dec. 2.8	Dec. 14.9	Dec. 13.2	Dec. 12.5	Dec. 3.7
Western	Dec. 8.9	Dec. 13.2	Dec. 13.8	Dec. 19.9	Dec. 6.6
Northwestern	Dec. 4.2	Dec. 11.6	Dec. 10.2	Dec. 10.4	Dec. 1.9
Southwestern	Dec. 9.5	Dec. 9.9	Dec. 6.2	Dec. 12.5	Dec. 6.5
Southern	Dec. 1.6	Dec. 5.8	Inc. 9.7	Dec. 14.3	Inc. 2.2
Far-western	Dec. 7.7	Dec. 7.1	Dec. 3.7	Dec. 7.1	Dec. 1.6
Totals	Dec. 4.4	Dec. 14.2	Dec. 11.4	Dec. 12.5	Dec. 3.7
Canada	Dec. 4.4	Dec. 8.5	Inc. 2.6	Dec. 4.4	Dec. 2.1

Every group of clearing houses showed a decrease in October compared with October a year ago. This tendency toward a decrease was most marked in the western and southern groups, where the decreases were respectively 19.9 and 14.3 per cent. The decreases reported in the New England and middle groups, 12.5 per cent. in each case, closely approximated the decrease shown in all clearings from October a year ago. The smallest decreases reported are those of the far-western group, 7.1 per cent., and of the northwestern group, 10.4 per cent.

Examination of details by cities shows more than the usual number of decreases in October, contrasted with a year ago. Only 14 out of 82 cities, comparing with a year ago, show increases, and, with few exceptions, these gains are trifling. The south and far west furnish the largest number of increases. Among the larger cities, St. Paul shows a gain of about 2 per cent. and Memphis of 9 per cent. Other cities showing increases are Houston, Norfolk, Augusta, Ga.; Portland, Ore., and Salt Lake City. The list of decreases is a long one, and includes New York, 10.8 per cent.; Boston, 12 per cent.; Philadelphia, 25 per cent.; Chicago, 11 per cent., and St. Louis, 14.6 per cent. The heaviest falling off is reported by New Orleans, 33 per cent., but Detroit closely approximates this with a decline of 32 per cent. Denver reports a decrease of 28.6 per cent., Cleveland of 19 per cent., Providence of 18.6 per cent., and Milwaukee of 17 per cent. The smallest decrease among the larger cities is that reported by Minneapolis, only three-tenths of 1 per cent. Other decreases include Kansas City, 9.5 per cent.; Pittsburgh, 13.9 per cent.; Baltimore, 4.9 per cent.; Omaha, 13 per cent.; Buffalo, 10.7 per cent.; Cincinnati, 16 per cent.; Louisville, 9.9 per cent., and San Francisco, 19.3 per cent.

Total clearings at sixty-seven cities for the ten months ending October 31 aggregate $41,572,609,851, a decrease from last year of 3.7 per cent., but an increase over 1894 of 12.8 per cent., while compared with 1893 there is a decrease of 9.3 per cent. Only one group of cities shows a gain for the ten months' period, the southern, which increased 2.2 per cent. Other groups show decreases varying from 6.6 per cent. in the western group to 1.6 per cent. in the far west.

In Canada the decrease for the month is 4.4 per cent., and for the ten months 2.1 per cent. Montreal showed a falling off of 8 per cent. in October, whereas Toronto showed an increase of 2.7 per cent.

BANK CLEARINGS AT 88 CITIES FOR OCTOBER, AT 82 CITIES FOR THE MONTH AND FOR TEN MONTHS THIS YEAR AND LAST, AND AT 73 CITIES FOR FOUR YEARS.

GOVERNMENT RECEIPTS AND EXPENDITURES.

Government receipts for the month of October amounted to $26,282,829, which represents an increase of nearly $1,700,000 as compared with the preceding month, but a decrease of over $1,600,000 as compared with the corresponding month last year. The customs receipts during the month were less than those from internal revenue by over $2,200,000, whereas in October last year the receipts from customs were in excess of those from internal revenue by over $500,000. For the four months ending with October the receipts amounted to $105,458,380, which represents a decrease of over $8,000,000 as compared with the corresponding period of last year. The receipts from internal revenue exceeded those from customs by over $4,300,000, whereas during the corresponding period last year the customs receipts exceeded those from internal revenue by nearly $7,600,000. The miscellaneous receipts for the four months amounted to $7,185,780, which represents an increase of over $2,400,000 as compared with the corresponding period last year.

The expenditures for the month amounted to $33,978,277, which represents an increase of nearly $7,400,000 as compared with the preceding month, but a decrease of over $500,000 as compared with the corresponding month of last year. The civil and miscellaneous receipts for the month show an increase of nearly $400,000 as compared with October, 1895. Those on account of the navy show an increase of over $1,000,000. The expenditures on account of the War Department show a decrease of nearly $300,000, those on account of pensions show a decrease of over $1,500,000, while those on account of interest show a decrease of over $130,000.

For the four months ending with October the expenditures amounted to $138,347,957, which represents an increase of over $8,300,000 as compared with the corresponding period of last year. The bulk of this increase was under the head of civil and miscellaneous expenditures, where the gain was over $7,800,000. There was a gain of over $3,500,000 in the expenditures on account of the Navy Department, but a decrease of over $3,300,000 in the expenditures on account of the War Department. The expenditures on account of Indians showed an increase of over $140,000, while the expenditures on account of interest showed an increase of over $400,000. So far the expenditures show an excess of over $32,000,000 over the receipts, whereas last year the expenditures exceeded the receipts by over $16,400,000.

THE REORGANIZED ATCHISON.

The report of the new Atchison, Topeka & Santa Fé Railway Company, the successor to the railroad company of the same name, necessarily covers only the six months from January 1 last, the date at which the new corporation took possession

of the property. The results for this period, however, make a favorable comparison with the figures for the same period of 1895. They are as follows:

SIX MONTHS ENDING JUNE 30.	1896.	1895.	Changes.
Gross earnings.....	$13,590,235	$13,452,777	Inc. $137,458
Operating expenses.	10,207,429	11,153,637	Dec. 946,208
Net earnings ...	$3,382,806	$2,999,140	Inc. $1,083,666

The feature of this exhibit is the striking decrease in operating cost. Last year the properties represented (which include substantially the whole Atchison system, with its branches and controlled roads, such as the Gulf, Colorado & Santa Fé, the Southern California, the New Mexico and Arizona and the Sonora railways) were operated for 82.90 per cent. of the gross receipts. This year, however, the operating cost was only 75.10 per cent. of the gross. It is, however, explained that the decrease in operating expenses is partly attributable to the necessity of treating unadjusted expenses of the receivership period as prior liabilities. Items of this character, which in a continuous management would have appeared as expenses during the six months' period, are as follows: Maintenance of road and structures, $6,950; maintenance of equipment, $204,112; transportation and traffic, $217,614; in all, $428,676. If these items are considered, the decrease in transportation and traffic expenses, as compared with the same period in the previous year, would be $552,882, while maintenance of road and structures and maintenance of equipment would show an increased outlay as compared with 1895.

The report is interesting in several features, not the least of which is the statement furnished of the funded debt outstanding on June 30 upon the reorganized property. It is in detail, with the amount of annual interest in each class and in the aggregate as follows:

	Bonds outstanding.	Rate, per cent.	Amount interest.
Guaranteed fund notes.....	$9,000,000	6	$540,000
Chicago & St. Louis first mortgage.	1,500,000	6	90,000
Miscellaneous unassented bonds...	696,550	various	31,450
Equipment trust, series "A".....	1,500,000	5	75,000
General mortgage.....	97,853,500	4	3,914,140
Fixed charges per annum.....			$4,650,590

According to this, the fixed charges of the new organization are $387,549 per month. The amount of preferred stock outstanding, as per the company's balance sheet, is $131,486,000, and of common stock $102,000,000, and there is also $20,000,000 of preferred stock in special trust. It is also to be noted that the reorganization committee is credited in the books of the company with no less than $5,976,175.

The report goes into some further details of interest to the security holders and presents a complete history of the reorganization from the time of the receivership down to the completion of the process and the transfer of the property to the new company. This is a feature which could with advantage be adopted by all reorganized companies in presenting the first report under the new conditions. It also explains the reasons for the sale of the Atchison's interest in the St. Louis & San Francisco Railway. It is stated that satisfactory relations have been maintained with the Atlantic & Pacific Railroad, pending a final adjustment of the relations between the two systems. The report says that the freight equipment of the Atchison lines is for the most part already supplied with air brakes, and many improvements have been made in the physical structure of the properties. Another matter of some importance is the disposition of the Atchison's coal interests. Some little time ago it was announced that the company would go out of the business of directly controlling or operating these properties, as they were a source of embarrassment in its relations with other corporations and individuals operating coal mines on its lines. It is now stated that it has leased its Colorado coal mines to the Colorado Fuel & Iron Company for three years, from August 20, 1896. It has also leased its Kansas mines for three years, from October 1, 1896, to Mr. C. J. Devlin, who for several years was manager of the Atchison coal properties. The terms of the leases are such that the company can lose nothing on the operation of the mines, while the general result of the leases upon the company's net earnings is expected to be favorable in many ways.

CIRCULATION STILL INCREASING.

Another marked increase in the amount of money in circulation is shown in the Treasury statistics for October, just issued. A net increase of $44,753,325 is shown for the month. The only items showing a decrease were gold certificates, where the falling off amounted to $539,330; Treasury notes of 1890, which showed a decline of $5,004,283, and currency certificates, which fell off $1,840,000 for the month. The most marked item of increase was one of $37,569,489 in gold coin. The other increases comprised $1,677,624 in standard silver dollars, $943,438 in subsidiary silver, $3,345,648 in silver certificates, $7,403,026 in United States notes, and $1,197,713 in national bank notes. The figures exhibiting the changes in money and bullion in the Treasury show a net decrease of $13,059,950. The decreases comprised $14,066,232 in gold coin, $493,639 in subsidiary silver, $7,403,026 in United States notes, and $1,764,842 in silver bullion. The increases included $672,376 in standard silver dollars, $3,229,283 in Treasury notes of 1890, $147,374 in national bank notes, and $6,618,754 in silver bullion.

The following table shows in detail the general stock of money coined or issued, the amount in the Treasury, and the amount in circulation on November 1:

	General stock, coined or issued.	In Treasury.	Amount in circulation Nov. 1, 1896.
Gold coin.....	$624,047,484	$107,706,505	$516,340,979
Standard silver dollars	439,552,141	381,361,339	58,190,802
Subsidiary silver	75,804,582	14,632,846	61,171,736
Gold certificates	39,588,139	1,390,830	38,197,309
Silver certificates	366,463,504	8,686,382	357,777,122
Treas'y notes, act July 14, 1890	123,229,280	39,269,516	83,959,764
United States notes .	346,681,016	89,730,690	256,950,326
Currency certificates, act June 8, 1872....	35,060,000	2,595,000	32,465,000
National bank notes..	234,984,444	12,981,868	222,002,576
Totals	$2,285,410,590	$658,354,976	$1,627,055,614

As compared with November 1 last year there was an increase of over $31,100,000 in the amount of gold coin in circulation, and there were likewise increases of over $22,300,000, of nearly $18,000,000 in United States notes, and of over $14,600,000 in national bank notes. The decreases comprised a little over $160,000 in standard silver dollars, over $2,600,000 in subsidiary silver, over $12,200,000 in gold certificates, over $30,500,000 in Treasury notes of 1890, and nearly $24,300,000 in currency certificates. The total volume of circulation shows an increase of nearly $28,200,000 as compared with the corresponding date of last year. The circulation per capita is estimated by the Treasury experts, on a population of 71,902,000, at $22.63. This represents an increase of 58 cents for the month, but a decrease of 9 cents as compared with November 1, 1895.

According to the monthly statement of the Comptroller of the Currency the national bank circulation oustanding on October 31 amounted to $234,897,657, which represents an increase of $1,345,627 for the month, and of $21,099,429 for the twelve months ending therewith. The portion of the circulation based on the deposit of bonds amounted to $216,510,014, which represents an increase of $1,842,320 for the month, and of $26,329,053 for the year ending with October. The portion of the circulation based on the deposit of money amounted to $18,387,643, which represents a decrease of $496,693 for the month, and of $5,229,624 for the year ending therewith. This statement shows a continuance of the tendency to a decrease in the portion of the national bank circulation based upon the deposit of money, and an increase in the portion based upon the bonds.

PROTECTION OF BANK DEPOSITORS.

An article contributed to the *North American Review* by Comptroller of the Currency Eckels on the protection of depositors will repay the perusal of banking officials, particularly those charged with the duty of general supervision. The Comptroller directs attention to the fact that deposit banking has become the feature of the national bank system in recent times and the issuing of circulating notes merely the incident, instead of, as in the early history of the system, the note-issuing feature being the feature and deposit banking but the incident. This change has led to the development of a feeling of solicitude for the safety of the depositor, and has brought in its train the need of stricter supervision over the banks on the part of the government and of enforcing more rigidly both the direct and implied powers which the Bank act has given its officer to protect the people against loss through imprudent, improper or criminal banking. As a result the average depositor has come to look upon the federal government as morally bound to insure to him in the largest measure the safety of his deposit in a national bank, just as the holder of a national bank note knows it to be legally bound to protect him against loss from the same.

Mr. Eckels points out, however, that it is impossible that in the work of maintaining the solvency of any bank the supervising governmental officer should be able to accomplish more than a part, and that in the largest degree the duty of caring for its interests must fall, as it rightly should, upon the executive officers and directors of the bank itself. As a matter of fact, the supervisory control exercised by the Comptroller is in no wise intended by the law to relieve or excuse directors of banks from active vigilance on their part, but, on the contrary, emphazises their duty in this regard. After a summary of the provisions defining the duties of the Comptroller, he points out that the history of bank failures where there has been no dishonesty, but only imprudent and improvident banking, shows that in the majority of instances such banks either engaged in speculative enterprises or failed to receive attention from their directors.

Bank defalcations, he says, are not less often due to inattention of directors or unwarranted over-confidence on their part in the bank's employees or unwillingness to adopt the best methods of bank bookkeeping. These defalcations, he says, are most frequently detected by the examiners in comparing the balances on individual ledgers with those on the general ledger, and by verifying the accounts with correspondent banks and bankers, the verifying of the accounts with correspondents having brought to light in more than one instance false entries on the books made to cover up defalcations. The balancing of individual ledgers has given rise on the part of the Comptroller's office to more criticism than any other one point in the management of banks, because where a form of ledger is used which does not show the balance of each account kept therein it is impossible for an examiner without spending more time than is at his disposal to verify its correctness and thus a defalcation may be covered up for an indefinite time. In many instances where banks have adopted a more modern form of ledger, in compliance with suggestions from the Comptroller's office, defalcations have been discovered which otherwise would have been still undetected. As a means of preventing defalcation on the part of bank officials, either aided by confederates within or without the bank, the importance of adopting a daily balance system of individual ledger, or at least a three-column ledger showing the balance of each account every time it changes, cannot, the Comptroller says, be overestimated. Finally, he suggests, the best and ultimate test of the correctness of balances on the individual ledger is a comparison with the same of the entries on the depositors' pass-books.

But, the Comptroller points out, when all is said, the great duty as regards the protection of depositors must fall upon the officers of the banks themselves. It rests with the directors of the banks to insist that the executive officers whom they choose shall manage the bank with such care that wrongdoing is impossible, and it is also their duty to see that this is done. The directors of banks too often fail to realize the importance of the office which they hold. They have no right to leave the management of the bank to the president or cashier, or both, but ought to insist on knowing what is being done and how it is being done. They ought to make thorough and frequent examinations of the bank, both as to the honesty of its conduct and the solvency of the paper which it accepts. It is their business to know that the transactions of the banks with which they are connected are properly carried out, and that such methods of bookkeeping and checking of accounts are adopted as would effectually remove opportunities for dishonesty. They owe this much to the shareholders who elect them and to the depositors and creditors who, relying upon their doing their duty, give credit to the institution they are attached to.

BANKING EMBARRASSMENTS FOR THREE YEARS.

In order to make as complete an exhibit as possible concerning banking and other financial embarrassments during the fiscal years ending August 31, for the past three years, along lines followed at the office of the Comptroller of the Currency, at Washington, BRADSTREET'S has brought together from its detailed reports the total number of such embarrassments during the three fiscal years ending August 31, 1894, 1895 and 1896, together with estimated assets and liabilities.

In the annual reports of the Comptroller of the Currency there appear compilations of embarrassments of national banks, and in the appendix statements of embarrassments of state, savings and private banks, of trust companies and of mortgage and investment companies, as compiled from

reports to BRADSTREET'S for the use of the Comptroller of the Currency.

Inasmuch as the fiscal year ending August 3, 1894, included a period in which many of the results of the panic of 1893 were registered, it was in some respects a favorable period in which to begin the compilation of statistics of this character. But when comparing the accompanying statistics the marked characteristics of the three years involved should be kept in mind. The earliest of the three years named was a period of extreme depression, following the panic of 1893. Then followed a moderate revival during the spring, summer and fall of 1895, and another contraction in 1895–96, due to merchants and manufacturers being unwilling to enter into new engagements until after election. This has been conspicuous during the current year.

In records given herewith it is seen that 15 national banks were included in the year ending August 31, 1894, that the total increased to 22 in the following year, and that it fell away to 20 in the twelve months ending August 31 last. State banks proved relatively greater sufferers, there being 27 in the earliest of the three years, 46 one year ago, and 55 in the year just ended. Savings banks maintained a comparatively even record in each of these years, there being 9 in 1893–94, 8 in the following year and 9 last year. Private banks are also conspicuous, the total being 21 three years ago, 25 in the year following, and 42 last year, while in the same years the number of trust companies reported numbered, respectively, 5, 1 and 3, and mortgage and investment companies, respectively, 3, 5 and 1. Grouping these totals it is found there were 83 in the year 1893–94, 107 in the following year, and 130 last year.

Excluding mortgage and investment companies in comparing liabilities, it is found the total indebtedness of embarrassed banking institutions in the year ending August 31, 1894, was less than $11,000,000, but in the following year it was about $15,000,000, and last year slightly in excess of $13,000,000. Of these aggregates, embarrassed national banking institutions reported about one-third in each of the years specified; state banks rather more than that proportion last year and about one-fifth each in the two preceding years, and savings banks about one-fourth in the year first named, less than one-third in the following year, and about 7 per cent. of the total liabilities in the year ending August 31, 1896. Liabilities of private banking institutions did not amount to one-fourth of the total three years ago, and were smaller than that in the following year, but in the year ending August 31, 1896, they amounted to about 20 per cent. Corresponding comparisons with respect to trust companies do not call for particulars, owing to the smallness of the amounts involved.

	Year ending August 31, 1894.			Year ending August 31, 1895.			Year ending August 31, 1896.

As the result of a special investigation in the cotton belt in South Carolina, Georgia and Florida, through fertilizer companies, farmers and merchants, the opinion is expressed that the section mentioned is in better financial condition generally than for many years. Much of the present cotton crop was made on a basis of 5c. a pound, and the price received, 7c. and upwards, has been in the nature of an agreeable surprise. The planters have certainly benefited, as it shows by their reducing their obligations and clearing up old liabilities. Collections generally are classed as quite satisfactory, and, in some instances, as good. More corn and meat will be made at home this year than in average years. No special shortage in yield is looked for in the section mentioned, and the increased acreage and the higher price is looked to to repair any damage of this sort where occurring. The business community generally expresses satisfaction at the outcome of the election.

CURRENT BUSINESS NEWS.

Industrial.

A recent copper circular says: "In no direction is there any accumulation of supplies to disturb prices, and with such a scarcity of raw material above ground seeking a market, the copper situation in itself is particularly healthy. Although production in this country for the ten months ending October 31 will approximate to about 168,750 tons, being an increase of about 28,560 tons over the same period in 1895, yet the extra shipments to Europe this year of about 47,000 tons have really reduced the available supply in this country since January 1 more than 18,500 tons, so that the statistical position of copper here is stronger than a year ago. The international character of the copper market gives American producers a distinct advantage, so that they are not dependent on the home demand for marketing more than 40 per cent. of their output, Europe having taken up to November 1 about 60 per cent. of the total American production."

The Cleveland American Wire Works "has started up on double time and is running full blast, over 1,300 men now being employed."

The Chicago *Journal of Commerce* says: "The next year is likely to see some important developments that may materially change the character of our metal product. Andrew Carnegie is quoted as saying that the rapid growth in the open hearth process of steel making is modifying many mechanical calculations, for engineers are now so generally specifying open hearth steel that it is almost impossible to sell the Bessemer grade. Ships, bridges, boiler plates and even high steel structures are most favorably inclined to the open hearth product, which is fast approaching a practical parity of price with Bessemer."

Commercial.

Joint conventions of coal miners and operators in the Pittsburgh district "will soon be called upon to consider a movement to raise the price of mining and the selling price of coal which is considered imperative to save trade from complete demoralization."

All anthracite interests operating in western anthracite markets were to send out circulars this week "reëstablishing western price of $5.60 for broken sizes on cars and $5.75 in yards, and $5 85 and $6 respectively for other prepared sizes."

The *Electrical World* says: "The demand for American electrical machinery in Europe and elsewhere is constantly increasing. The market broadens as the special efficiency of the American product becomes better known. It is confessedly in the lead of other apparatus and equipment, and has without doubt a vast field of enterprise in foreign countries. It has been adopted in Shangai, China, and is about to light up the town of Buluwayo in South Africa. Not long since this South African town was the bailiwick of Lobengula, the war-chief of the savage Matabele. It has now its modern streets and edifices, and American enterprise has secured the right to illuminate its busy thoroughfares."

The San Francisco *Chronicle* says: "China has thrown down the gauntlet to the big coal miners of the Pacific coast, and to those of the United States, for that matter. The American bark Colorado, which arrived in port August 27, brought a mixed sample cargo of anthracite and manufactured coal, mined and made in the Tonquin district. It was consigned to a coal-dealing firm of this city, which promises to push the Chinese fuel on the coast market at prices greatly below those which Pennsylvania and Welsh coals of the same character are now bringing. Examining experts have pronounced the Tonquin coal bed almost inexhaustible. The Chinese article is in the market to stay, it is said, at least as long as present tariff conditions exist."

Mr. Ellison estimates the world's consumption of cotton will be 8,800,000 bales, against 8,400,000 bales the past year. "The visible supply at the beginning of the crop year was below any year since 1891, or about 20.10 against 27 96 a year previous and 26.87 four years ago. The world's crop last year was considered as but 11,140,000 bales, against 14,053,000 in 1894–95."

The *Modern Miller* claims northwest wheat deliveries "show no signs of increasing, and that the milling demand is urgent."

The receipts of wheat from July 1 to date have been as follows in the years named:

	Winter.	*Spring.*	*Total.*
1896	19,150,000	68,334,000	87,484,000
1895	16,236,000	59,475,000	75,711,000
1894	26,262,000	57,823,000	84,085,000
1893	29,103,000	48,718,000	77,824,000
1892	56,962,000	77,027,000	133,989,000
1891	44,874,000	70,891,000	115,765,000

Stocks of lard held at principal points of accumulation in the United States, in Europe and afloat on the 1st instant amounted to 486,631 tierces, against 519,474 tierces one month ago, 217,938 tierces one year ago, 105,289 tierces two years ago, 68,883 tierces three years ago, 91,914 tierces four years ago, and as compared with 247,198 tierces at the like date in 1891.

Stocks of wheat in St. Louis private elevators on November 1 amounted to 924,000 bushels.

Financial.

The liquidating trustees of the Standard Oil Trust have declared a dividend of $3 per share on the corporate stocks remaining in their hands and an extra dividend of $2 per share, both payable December 15, 1896. The first sum is the regular quarterly payment.

The Chicago & Alton Railroad Company has declared a quarterly dividend of 2 per cent. on its common and preferred stocks, payable December 1.

The American Tobacco Company has declared a dividend of 4 per cent. on its common stock, payable December 1.

The Chicago Stock Exchange was reopened to-day after having been closed since August 3.

The different banks in Windsor, Ont., which had, pending the result of the election in the United States, "refused to accept United States currency for deposit are now satisfied that no loss can accrue to them through the acceptance of American money, and the boycott has therefore been raised. American money will now be taken at par as heretofore."

Railroads.

The following gross and net earnings returns for September and the nine months' period are reported:

The Chicago, Peoria & St. Louis Railroad Company reports for the fiscal year ending June 30, 1896, as follows:

	*1896.	1895.	*Changes.*
Gross	$959,638	$933,646	Inc. $25,992
Operating expenses	709,895	693,765	Inc. 16,130
Net	$249,743	$239,881	Inc. $9,862
Charges	79,103	87,754	Dec. 8,651
Balance	$170,640	$152,127	Inc. $18,513

* Operated by receiver during first seven months of this period.

The Staten Island Rapid Transit reports for the September 30 quarter:

	1896.	1895.	1894.
Gross	$219,965	$294,002	$380,939
Operating expenses	96,895	144,661	185,502
Net	$123,069	$149,341	$195,437
Charges	77,737	69,977	83,101
Surplus	$45,332	$79,364	$112,336
Cash on hand	64,634		

The main features of the September 30 quarter's report of the Brooklyn Heights' Railway are given as follows:

	1896.	1895.	*Changes.*
Gross	$1,189,871	$1,150,285	Inc. $39,586
Operating expenses	673,506	638,362	Inc. 35,144
Net	$516,365	$511,923	Inc. $4,442
Other income	61,326	54,788	Inc. 6,538
Gross income	$577,691	$566,711	Inc. $10,980
Fixed charges	505,946	516,726	Dec. 10,780
Surplus	$71,745	$49,985	Inc. $21,760

The Revere Beach & Lynn reports to Massachusetts Railroad Commissioners for the quarter ending September 30:

	1896.	1895.	*Changes.*
Gross	$77,017	$101,263	Dec. $24,246
Net	32,293	59,130	Dec. 26,837
Surplus after charges	19,776	46,065	Dec. 26,289

The Kanawha & Michigan reports for the fiscal year as follows:

	1896.	1895.	*Changes.*
Gross	$476,785	$420,625	Inc. $56,160
Net	114,150	118,261	Dec. 4,111
Deficit	6,498	16,586	Dec. 10,088

The Long Island Railroad reports for the year ending June 30:

	1896.	1895.	1894.
Gross	$3,962,799	$4,014,019	$4,143,433
Operating expenses	2,541,635	2,593,323	2,690,085
Net	$1,421,164	$1,420,696	$1,453,348
Total income	1,576,818	1,563,051	1,555,746
Taxes and charges	1,146,931	1,058,897	1,036,091
Balance	$429,887	$504,154	$519,655
Dividend	480,000	480,000	570,000
Deficit	$50,113	$24,154*	$50,345

* Surplus.

Accounts written off in 1896 amount to $211,137, leaving a total deficit for the year of $261,250, and reducing the total surplus to $500,730.

The Grand Trunk Railway Company of Canada reports for the half year ended June 30 as follows:

Gross earnings	£1,707,539	£1,653,092	Inc. £54,447
Operating expenses	1,218,244	1,171,072	Inc. 47,172
Net earnings	£489,295	£482,020	Inc. £7,275
Other income	90,176	87,903	Inc. 2,273
Total income	£579,471	£569,923	Inc. £9,548
Total charges	661,533	664,006	Dec. 2,473
Deficit	£82,062	£94,083	Dec. £12,021

Miscellaneous.

The American Institute of Architects, in convention at Nashville, Tenn., recently, discussed papers prepared by Dankmar Adler, of Chicago, and others on "The Influence of Steel Construction and of Plate Glass on the Development of Modern Style."

A late improvement in the postal service in cities is traveling post offices—"wagons that will collect mail from the post boxes, assort and cancel it and deliver it direct to the mail trains, thus avoiding the delay of going through the central office."

A curious fact is reported from the officials at the Schuylkill arsenal, Pennsylvania. The government maintains at that place the army establishment for making enlisted men's clothing. Among the articles converted from the cloth bought are blouses made of certain stock sizes. It is now found that there is a lack of uniformity in the size of soldiers of the different arms, and the rules of dimensions which govern the cavalrymen, for instance, are not applicable to the artillerymen. The blouses that will fit an infantryman will be found all out of proportion for the soldiers of the other arms.

Under the head of fortifications General Craighill, chief of engineers, in his annual report says "that the work of preparing emplacements for guns has been pushed with much vigor where the money was available, particularly at New York, Delaware River and Charleston."

Foreign.

The German and English potato crops are reported short of the yield in 1895.

The London *Economist* takes the average prices of twenty-two leading commodities for the five years preceding 1850, the year when the California and the Australia gold product first began to exert their influence, and reduces them to the uniform standard of 100, which gives a total of 2200 called the index number. "The record shows a rise up to 1857 of nearly one-half, the total index number of that year being 2996 against the 2200 of the starting point. Then comes a gradual fall, which brings the index number down to 2023 on January 1, 1886, since which date it has fluctuated both above and below 2200, having been as high as 2236 on January 1, 1890, and as low on January 1, 1895, as 1923, at which figure it stood on the first day of the present month."

The London *Mark Lane Express* predicts that November will be a period of dull wheat markets, and advises English farmers to use reserve in selling, as there is sure to be a rise in December. In regard to other staples it says: "There is a collossal crop of corn in the United States, leaving 40,000,000 quarters available for export, and this is certain to keep oats and feeding barleys at a moderate price."

The pig iron trade in Belgium is in a good situation. Producers have sold "the whole of their production until the end of the year, and are rarely inclined to enter into contracts for delivery over the first quarter of next year unless the terms offered are specially satisfactory."

Complaint is made in England because a few corporations "control the entire import trade in frozen meat," and now a combination is being perfected to control the sale of both English grown meats and meat imported alive or dressed. The *American Agriculturist* adds that this "is leading the coöperative societies or stores to go into the business. The Manchester Coöperative Wholesale Society, which does a business of over $50,000,000 per year with 2,000 local coöperative stores over the kingdom, is arranging for direct importations of Australian meats. There is no reason why our American export meat trade should not get the benefit of this direct market of English consumers."

Canadian imports for the fiscal year ended June 30 were valued at $118,011,000, against $110,781,000 in 1895, and the exports at $121,013,852, against $113,638,803 in 1895.

Returns made by British Columbia sealing fleet in Victoria of their season's catch show that, with the exception of a couple of vessels not yet reported, the total catch along the British Columbia coast aggregated 10,651, as compared with 12,114 last year Along the Japanese coast the catch was 18,019, as compared with 18,979 last year, and along the Copper island coast 1,028, as compared with 7,407 last year. These figures, with the returns from Behring sea, bring the total up to 41,281, as compared with 74,124 last year and 94,474 in 1894.

The English farmer regards the importation of foreign mutton with indifference "because its quality is so inferior to English mutton, and the quality of English mutton is largely the result of freely feeding oil-meal and roots, one of which this country largely exports, and the other it does not raise in any considerable quantity."

It is said that if the necessary arrangements with the Dominion government can be made, "the Canadian Pacific Railway is ready to construct the Crow's Nest line in British Columbia, with branch lines running north and south to serve the various mines. The railway would carry the ore to a central point, where it would be smelted. The late government was prepared to loan the railway $5,000,000 to construct this road, but whether the Canadian Pacific Railway will ask the present government to revive this arrangement or not is not known outside the railway management."

The German Bundesrath or Federal Council has given its assent to a bill increasing by 1,500,000 marks the subsidy paid by the empire to the North German Lloyd Steamship Company in consideration of the company establishing a fortnightly service to China.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Contract—Sale—Usury.

The Supreme Court of Georgia held, in the recent case of Clark vs. Thompson, that an absolute contract for the sale of personalty is not void although a part of the consideration of the sale may be the payment of a debt infected with usury; and, where such a contract is evidenced by a written bill of sale, the vendee may maintain thereon an action of trover against the vendor.

Creditor—Husband and Wife.

The Supreme Court of Minnesota held, in the recent case of Sudbo vs. Rusten, that a judgment creditor of a married man is not entitled to have his judgment made a general or specific lien upon the husband's one-third interest in the real property of the wife during coverture, and that during such time she is entitled to hold it free from any liability on account of his debts as fully as if she were unmarried.

Married Woman—Sale for Taxes.

The Kentucky Court of Appeals held, in the recent case of Anderson et al. vs. Batson, that a married woman has the right under section 21 of article 7, chapter 92 of the General Statutes, to redeem her land sold for taxes at any time within five years from the time notice of the purchase was given to both husband and wife; that no judgment can deprive her of that right; and that a judgment in favor of the purchaser for the "possession" of a married woman's land sold for taxes leaves both the title and the right to redeem the same as if no judgment had been rendered.

Insurance—Loss—Proof—Evidence.

The Kentucky Court of Appeals held, in the recent case of The German Insurance Company vs. Norris et al., that under a policy of fire insurance which provided that the insured shall, it required, furnish a certificate of the nearest magistrate or notary public as to the loss, the failure to furnish the certificate when required was not a bar to a recovery on the policy; that the failure of the insured to disclose the fact that there had been an attempt to burn the insured property did not authorize a forfeiture of the policy unless he was asked about that matter, the agent of the company being besides aware of the attempted burning, and notice to him was notice to the company; and that if the general agent of the company denied the debt and refused to pay, as the jury was authorized to find from the evidence, the insured was not required to furnish proofs of loss.

Customs Duties—Protest—Recovery.

A decision of interest to importers has just been rendered by the Supreme Court of the United States in the case of Saltonstall vs. Birtwell. It appears that the appellee, an importer at Boston, sued the collector for the recovery of dues paid, protest of which was not made at the time of payment. The government contended that, in the absence of protest at the time the money was paid, the right of recovery was lost. The Circuit Court for Massachusetts and the Court of Appeals for the First Circuit successfully ruled against the United States, and Mr. Justice Shiras, announcing the judgment of the Supreme Court, said it took the same view of the question as did the courts below and affirmed their judgments. It was held that effective protest might be made at any time within ten days after the final adjudication and assessment of the duties.

Patent—Application—Burden of Proof.

The Court of Appeals of the District of Columbia held, in the matter of the appeals of Drawbaugh, reported in the Washington *Law Reporter*, that the onus is on the applicant for a patent to show that all the conditions and provisions of law have been fully complied with, that the inventor is justly entitled to a patent, and that the invention is sufficiently useful and important to justify the issue of a patent, and that it is the duty of the Commissioner of Patents, if there be within his knowledge any reasonable ground why a patent should not issue, to refuse the patent, whether the specific objection be raised by the examiner or not; and especially is it his duty to do so where the primary examiner and examiners in chief have found such ground for refusal to exist. The court held further that the official report of a decision of the Supreme Court of the United States, made under authority of law, and the findings of the court and its decision thereon, in respect of all questions arising under the laws of the United States bind not only parties to the proceeding, formal or otherwise, but all the departments of the government; that the officials of the Patent Office, as well as of all the United States courts, are bound to take notice of such decision and of the findings and conclusions of that court, and to act in conformity to them; that the claim made by the applicant in the present cases being the same that was presented, questioned and definitively passed upon by that court in the telephone cases, the official report of that decision, in 126 U. S. 1, was properly referred to and made the basis of the rulings of the Patent Office in the present cases; that upon the findings and decision of the Supreme Court in that case all credit was properly denied to the affidavits filed by the applicant in these cases; that the decision there reported furnished ample ground for the rejection of the claims made by the applicant in these cases, and that it was not necessary, in order that the proceedings in that case might be considered by the officials of the Patent Office in the present cases, that a duly certified transcript of the record in that case should have been filed in the Patent Office, and that it is not necessary that a person should appear upon the record as a technical party to the proceedings in order to be bound by the judgment; but if he is represented in the proceedings, or is a party in fact though not of record, he will be bound.

Railroad—Fare—Passenger—Ejection.

The Supreme Court of Michigan held, in the recent case of Chamberlain vs. Lake Shore & Michigan Southern Railway Company, reported in the Detroit *Legal News*, that the appellant company could not collect more than three cents per mile for transportation of passengers on its road, and that where a conductor of a railroad train refuses to accept the legal fare tendered him by a passenger for transportation to his destination, and upon the refusal of the passenger to pay the excess demanded, ejects him from the train, the railroad is guilty of a trespass and liable to respond in damages. The court said: "It is the claim of defendant that plaintiff should have paid the extra four cents, and if he thought the company was not entitled to it he should have sued the company to recover it back, and that when he failed to do this and was put off the train that he could recover only nominal damages." Referring to a number of cases cited by the appellant, the court continued: "An examination of these cases will disclose the fact that they do not sustain the position urged by counsel. They relate to cases where the passenger was seeking to travel without having a ticket indicating his right to passage, and without offering to pay his fare. The case at issue is entirely different from any of them. Here the defendant was exacting illegal fare. Something it had no right to do. The plaintiff was seeking to have transportation as a passenger and was willing to pay the legal fare therefor. Upon the tender of the legal fare he had a right to be carried to his destination. It was the duty of the defendant under the facts shown by the record to carry the plaintiff to Flat Rock. Instead of performing its duty it committed a trespass upon him."

Debtor and Creditor—Assets—Lien.

The Supreme Court of Minnesota held, in the recent case of Billson vs. Lindbergh et al., that under section 5912 of the Minnesota General Statutes of 1894 a cause of action for damages for fraud and deceit perpetrated on plaintiff in the exchange of property would survive his death. It appeared that the judgment debtor, a resident of the state, was absent therefrom so that service in supplemental proceedings could not be had on him; the judgment creditor attempted by the same affidavit and order to commence such proceedings against him under section 5486, General Statutes 1894, and against a third person under section 5496; service was had on such third person, who appeared and disclosed, and a receiver was appointed under section 5492, but no service was had on the judgment debtor and he did not appear; during this time a fourth party had in its hands assets of the judgment debtor subject to be reached on supplemental proceedings, and no action or other proceeding was ever commenced against him by the receiver; about six months after his appointment these assets were levied on by another judgment creditor. The court held that the commencement of supplemental proceedings against the judgment debtor under section 5486, and the procuring of personal service on him, gave a general equitable lien on the assets subsequently discovered by the judgment creditor exercising proper diligence, but that no service being had on the judgment debtor no such general lien was acquired; that the proceedings gave a lien on the debtor's assets in the possession or under the control of such third person, but not on the assets in the hands of such fourth party, and that a lien might have been acquired on the assets in the hands of such fourth party by the commencement of an action against him by the receiver.

BUSINESS NOTES.

American Wool in England.

The *Dry Goods Economist* says: "Quite a stir has been caused in England recently by some mohair fleece grown in California which has been exhibited at the United States Consulate at Bradford. The fleece, which is that of a two-year-old graded doe, has been closely examined by several leading mohair dealers in Bradford, all of whom expressed the highest opinion of it. The only criticism is that the ends of some of the clip are brown, and on the whole the hair is said to rank fully equal with that from the Cape and from Turkey."

Munich International Art Exhibition, 1897.

Information respecting the seventh International Art Exhibition, to be held at Munich in 1897, under the patronage of H. R. H. the Prince Regent of Bavaria, has been received from the British Science and Art Department. "The German Ambassador in London has written to the Secretary of State for Foreign Affairs, at the request of the royal Bavarian government, inviting the Marquis of Salisbury's attention to this proposed exhibition, and expressing the hope that academies and artists may be induced to send works for exhibition. It is stated that the exhibition to be held next year will be carried out mainly on the lines of the rules of the exhibition of 1892. Applications for further information respecting the exhibition should be addressed to the Central Committee, Royal Crystal Palace, Munich."

Cottonseed from Africa.

The *Dry Goods Economist* says: "A sensation has been caused in the southern states by a report, which seems to be well founded, that a new kind of cottonseed has been imported from Africa which develops plants twenty feet high and more, and yields, on the poorest kind of land, from two to four bales to the acre. It is said that so alarmed are certain cotton raisers that they have offered a gentleman who has the seed in his possession a large sum of money if he will destroy it. Of course the result of such a method would last but a short time. If there is any merit in this cottonseed others would soon bring it over. It is claimed, moreover, that such a seed would benefit rather than injure the planters of the cotton belt, since if such crops could be obtained the cotton acreage could be correspondingly decreased, and the land thus left vacant could be employed for cultivating other products."

Cycle Trade With England.

Consul George F. Parker writes the Department of State from Birmingham, England, that the trade with the United States in cycle materials continues to decline. The steel tube trade reached its highest development during the December quarter, when tubes to the value of $251,651 were sent to the United States. During the June quarter tubes to the value of $130,253 were shipped, and for the quarter ended September 30 last shipments were reduced to $67,787. Many of the contracts made by American cycle makers have expired and others are running out, and Mr. Parker is of the opinion that trade in these products will practically cease by the end of 1897. No complete bicycles have been sent to the United States from Birmingham for some time. On the other hand a good many American machines have been sold in the Birmingham district. It is not safe to predict how long this demand will continue, but as trade conditions have improved generally during the past year it is likely that a considerable number of machines of good quality may be sold if offered at prices slightly lower than those ruling for the same kind in Birmingham.

Boycotting in Japanese Trade.

The British consul at Hiogo says that boycotting has become an established institution of Japan, owing to the trade guilds and the strictness with which the members are ruled. The consul mentions "two cases of boycotting during the past year which excited a good deal of discussion. One was an agitation against Chinese merchants in Japan to compel them to put an end to the old custom of levying commission and a percentage from the Japanese. The combination against the Chinese was a powerful one, and consisted of many guilds, including those of sugar, silk fabrics, iron and copper, and marine products. In another case, a leading British firm of Yokohama imported to the order of a prominent Japanese merchant, who is director of an important bank, a parcel of goods. When the latter arrived the Japanese refused to take delivery, and the British importers having instituted legal proceedings in the native courts, judgment was given against the Japanese, who was ordered to take delivery of the whole of the goods and to pay the plaintiffs the cost and charges. Thereupon the guild of which the defendant is a member decided that the British importers and plaintiffs should be boycotted if they insisted on maintaining and enforcing their judgment, and as the resident partner of the British firm deemed it inexpedient to face a general boycott in Japan the firm submitted to a compromise involving a serious loss."

Mexican Patent Laws.

The *Engineering & Mining Journal* says: "The last session of the Mexican Congress amended the existing patent law of that country so that article 33 reads as follows: 'The owner of a patent is obliged to prove to the Department of Encouragement at the end of each period of five years of the life of the patent that, with a view of maintaining it for another five years, he has paid into the general Treasury of the Federation the sum of $50 at the close of the first five years, or $75 at the expiration of ten years, and $100 at the expiration of fifteen years. All these payments have to be made in Mexican dollars. The term within which these payments have to be proved shall be two months after the conclusion of each period of five years. This term cannot be extended. Persons who up to the promulgation of this law shall have lost their patents under section 3, article 37 of the law of June 7, 1890, may avail themselves of the benefits of this law to save their patents, provided they pay the proper fees within three months of such promulgation. But the patent thus revived is without prejudice to the rights acquired by other parties subsequently to the declaration of forfeiture.'"

Canadian Supplies of Timber.

The *Northwestern Lumberman* says: "It is developing that in northern Ontario and Quebec there is a wealth of timber which has not been appreciated, simply because the country has not been explored. The Canadian lumbermen have not ventured far beyond the 'hight of land,' or Canada's backbone. Of course the timber in the further north is mostly spruce, tamarack and cedar, and the growth has always been held to be small. Dr. Bell and others in the geological survey, at Ottawa, are shedding some light on the situation, according to the *Canada Lumberman*. Lately there was shown in the office of the clerk of forestry, at Toronto, two samples of timber which had been brought from the head of Lake Temiscamingue. One was cedar and the other was spruce. The diameter of the cedar was over two feet; that of the spruce eighteen inches. It has been supposed that six or seven inches was about as great a diameter as trees generally attain in that region, but this supposition is now shown to be an erroneous one. Our Canadian contemporary thinks that when the northern districts shall have been explored, and it is found that the timber will justify the building of logging railways to bring it within reach of markets, there will be a development of these fresh resources. In respect to spruce the time is swiftly approaching when the demand for pulp wood will induce a penetrating of these unexplored timber districts in search of new fields of operations."

The Outlook for Wheat Prices.

Beerbohm's *Evening Corn Trade List*, London, says: "As will be seen, the months of November and December are those in which the greatest increase occurs; but it must not be forgotten that the present season differs from its predecessors, inasmuch as the combined production of Russia and America has not been so small as it is this year in any of the above seasons. A comparison of the aggregate American and Russian crops since 1891 will, indeed, be found very instructive:

WHEAT PRODUCTION, AMERICA AND RUSSIA.

	Quarters.		*Quarters.*
1896	95,000,000	1893	109,000,000
1895	111,000,000	1892	110,000,000
1894	119,000,000	1891	115,000,000

"As was to be expected, the recent rise in prices has set in motion an enormous quantity of wheat, which, but for the reduced stocks in importing countries, might have had a greater effect upon prices. During the past four weeks the shipments to Europe have, in fact, averaged 1,215,000 quarters per week, against 940,000 quarters last year and 895,000 quarters in 1894. The estimated requirements this season are 865,000 quarters per week. The result will be, of course, that supplies will now be increasing, so that there will be an opportunity of reconstituting stocks in the United Kingdom, and at the same time a wholesome check to undue excitement in buying will be imparted. To sum up the recent movements in the trade, it may be said that the advance has been too rapid, although warranted probably by the actual position; a reaction from such a forced point was inevitable, but there ought to be no serious giving way in prices."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The expected has happened in the success of the fight for sound money. One result is a return of confidence in the stability of values and in an early revival of demand for staples. Lower rates of interest and a willingness on the part of banks to make loans which had previously been declined, are additional evidences of the meaning of the maintenance of the gold standard. Business was practically suspended throughout the country early this week, and there has been little increase in the volume since the election, compared with like periods in preceding weeks. But manufacturers and jobbers are more inclined to purchase in advance instead of for nearby wants only, and in a few lines, notably wool, cotton, iron and steel, a larger volume of purchases is reported. That merchants generally share the confidence in an early revival is indicated by hardening staple prices and the increases in quotations in addition to those given in preceding weeks. The gold which had been withdrawn from savings and other banks by timid depositors is flowing back into the banks much faster than it was drawn out, and advices from various financial centers are that wages and small checks are being paid freely in gold this week. Sales of cotton goods have been freer and some mills are better employed. Woolen mills, also, report more orders, and a tendency to prefer higher-cost goods. Numerous industrial establishments which have started up within two days report being offered large orders if they would sell for 1897 delivery at present prices. Many Rhode Island manufactories report preparations for a larger output than anticipated, and that orders received contingent on election results, notably in the lumber and jewelry lines, are now being filled. Millions of dollars worth of orders for general merchandise given contingent on the success of sound money are now being filled. Owing to the lateness of the season few have regarded the outlook as promising much in the nature of a boom during the current year. At a few northwestern commercial centers large orders have been received from country merchants within a few days, and in Georgia farmers have met their obligations this autumn more promptly than for years past, and southern merchants and manufacturers are reported looking ahead confidently to a marked improvement in business in the near future.

Bank clearings totals continue below the billion-dollar mark, $995,000,000 for the past week, an increase of 3 per cent. over last week, but a decrease of 12 per cent. compared with the like total last year, 5 per cent. compared with the like total in 1894, 7 per cent. less than in 1893, and 15 per cent. less than the like total in 1892. Reactions in quotations are conspicuous only for Indian corn and lard, while prices for oats, pork, sugar and petroleum are firm and practically unchanged. Pig iron is 25c. higher, with sales of considerable amounts in western markets. Lumber is firm, the tendency is upward, and there is an advance for white pine. Renewed demand for cotton goods and placing orders with mills advance print cloths. Cotton, rosin and turpentine are higher, as is coffee, while wheat, under the stimulus of a strong statistical position, and, to an extent, the results of the election, reports another marked advance.

Total exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 3,472,000 bushels, against 3,628,000 bushels last week, 2,566,000 bushels in the week one year ago, 2,689,000 bushels in the week two years ago, 2,813,000 bushels three years ago, and as compared with 3,885,000 bushels in the corresponding week of 1892. Exports of Indian corn amount to 2,247,000 bushels this week, about 200,000 bushels less than last week, nearly twice as much as in the corresponding week one year ago, and much more than in like weeks in the three next preceding years.

The election has developed a bullish speculative feeling in the New York stock market. The enthusiasm with which the sound-money victory was greeted on Wednesday, both here and in London, was temporarily checked by the qualification of first estimates of the electoral majority and by revived talk of Cuban complications. Professionals who bought prior to the election also took profits freely. The acknowledgment of defeat by the silver candidate and the distinct easing of the money market through the release of hoarded gold have, however, caused increasing public purchasing and revived the professional bullishness under which prices tend to advance further. Bonds are in demand at higher prices. Governments are up and municipalities are obtaining bids at higher prices for bonds issues offered in vain a few weeks ago. Foreign exchange was weakened by offerings of hoarded sterling bills, but is now firm and higher at 4.85¼ for demand sterling on increased inquiry caused by the easier money market. Gold imports are checked for the present. The election is very favorably received in the London market, and a strong tone is shown in the market for American securities there, with evidences of growing public interest.

On October 1 domestic and Canadian available wheat stocks were nearly 5,000,000 bushels in excess of the total one year ago, while on November 1, 1896, they were 1,600,000 bushels less than one year ago. Northwestern wheat experts insist the spring wheat crop is 80,000,000 bushels short, and that 25,000,000 bushels were rendered unfit for food after having been grown. They call the current crop 400,000,000 bushels, which, with the wheat carried over July 1 last, leaves only 22,000,000 bushels for export in the remaining eight months of the cereal year. World's stocks of available wheat on November 1 are the smallest for five years.

October bank clearings aggregate $4,547,000,000, a gain of 24 per cent. over September, but a decrease of 12.5 per cent. from October a year ago. Compared with October, 1894, the gain is nearly 7 per cent., and with October, 1893, the increase is 13 per cent. The October total is the largest for any month this year except January, and is 29 per cent. larger than that for August. The ten months' total of clearings is $41,572,000,000, a decrease from last year of 3.7 per cent., but an increase of 12.8 per cent. over 1894, while compared with 1893 the decrease is 9.3 per cent. Every group of states but one shows a decrease in the ten months' total from a year ago, the sole exception being in the south. Business failures throughout the United States this week number 223, 23 fewer than last week, 37 less than in the corresponding week of 1895, 18 fewer than in the like period of 1894, and 110 less than in the first week of November, 1893.

General trade throughout the Canadian Dominion remains quiet, although Montreal reports that the results of the election in the United States have inspired a better feeling among Canadian merchants. Mercantile collections are improved throughout the Province of Quebec. Unfavorable weather at Toronto and elsewhere in Ontario have served to make trade quiet, although collections in that portion of the Dominion are also improved. There is very little change in the business situation at Quebec City, but that which is reported is in the nature of an improvement. Demand in trade circles at Halifax is light. The New Brunswick lumber cut will probably be larger than last season. Fish prices in Newfoundland are still lower and trade there continues greatly depressed. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $24,801,000 this week, an increase of about 20 per cent. as compared with last week, a very moderate increase over the corresponding totals one and two years ago. There are 50 business failures reported from the Dominion of Canada this week, as compared with 37 last week, 39 in the corresponding week a year ago, 40 two years ago, and with 28 in the first week of November, 1893.

FINANCIAL.

The Money Market.

While the New York loan market is still unsettled the change in sentiment, as might be expected, has been of a striking character. The return to the banks of a large portion of the hoarded gold has been a feature since Wednesday, and this movement, it is expected, will continue for some weeks. Time money is not offered with much freedom yet, and the rates quoted are still 6 per cent. for all dates. Commercial paper is again salable, and buyers, both city and outside, are again coming into the market, though the offerings are not as yet on a large scale. Rates are irregular, quotations varying from 5 to 6 per cent. for doubles. The tendency is, however, toward easier conditions. The change in regard to call loans has been most marked. Last Monday rates quoted on the Stock Exchange for loans over the election at from 6 to 96 per cent., and the stringency of the situation was only relieved by the action of some of the banks, which, in pursuance of the arrangement made last week, sent in some funds when the pressure seemed too intense. Considerable amounts were loaned at ¼@½ per cent. commission and legal interest. On Wednesday, however, the relief was immediate. A quotation of 10 per cent. was recorded, but the bulk of the day's business was 6 per cent., and at the close balances were offered at 3@4 per cent. On Thursday and Friday rates were easy at 4@6 per cent. The premium for gold has disappeared, and parties who paid a premium for it are turning their boards into the banks, the United States Treasury, on Wednesday, having refused to give greenbacks in exchange for gold for the present, on account of the difficulty of handling it with an insufficent force in the coin division, and large arrears of other work to make up. Considerable amounts of gold have been turned into the Treasury at other cities.

Foreign Exchange.

On the days preceding our election the exchange market shared in the extreme nervousness of all the markets. Mercantile inquiry ceased, but there was still buying by interests which were accumulating sterling in lieu of gold. Drawers, however, were uncertain and unwilling to do much, and the posted rates advanced on Monday ½c. to 4.82½@4.86, while business in bankers' demand sterling was firm at 4.85@4.85¼, the actual figures being difficult to determine. On Wednesday the market shared in the general feeling of confidence which followed the triumph of the gold standard cause. The feature was the immediate appearance of large amounts of hoarded bills of exchange, while the relaxation in the money market was not sufficiently prompt to create any marked inquiry from mercantile quarters. Under the pressure in question posted rates were reduced 1c. to 4.81½@4.85, and bankers' demand sterling sold as low as 4.83, the bulk of the business being done at 4.83½@4.83¾. Long bills were also very weak at 4.80½@4.81. On Thursday, however, the market experienced a renewal of the demand for bills from merchants and importers, while the supply of commercial drafts was considered poor. The market, it is true, was dull at times, and, though posted quotations were left unchanged, actual business in sight sterling was 4.84¼@4.84½. On Friday increased strength developed. The renewed mercantile inquiry was supplemented by purchases to pay off sterling loans. Posted rates were advanced to 4.82@4.85½, and actual business in sight bills rose from 4.84¾ to 4.85¼.

Some scattering engagements of gold for America were reported in London this week. They amount to upward of $1,000,000, but this, with the amount still on the way from Europe and the $5,000,000 to $7,000,000 en route from Australia to San Francisco, will, it is thought, end the gold movement for the present. The arrivals of gold here from Europe during the week were $3,070,000, and the total amount received at all ports since the movement began foot up $67,035,000. The strength of the London money market is a factor in the exchange situation, and constitutes a bar to the continuance of gold imports unless, as is not unlikely, European purchases of our securities assume large proportions.

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.85¾; commercial bills, 4.80¼@4.80½; francs, 5.21⅞@5.19⅜; reichsmarks, 94 7/16@95⅛.

The Bank of England discount rate was unchanged on Thursday at 4 per cent. The bank lost £375,000 gold for the week, of which £311,000 was American coin sold. In the London open market discount is up to 3⅝ per cent., and call loans 3½ per cent. The London money market showed great relief at the result of our election, but the opinion there is that more gold will go to the United States in connection with the wheat movement. There is a general impression there that the money market will be high during the remainder of the year. The Bank of England seems to be working for higher money rates.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending October 30, 1896:

	1896.	1895.
Dry goods	$1,290,659	$2,406,527
General merchandise	7,067,300	8,396,271
Totals for the week	$8,337,959	$10,802,798
Previously reported	374,182,413	431,807,315
Since January 1	$382,520,472	$442,673,113

The exports (exclusive of specie) from New York to foreign ports for the week ending November 3 were $1,206,060 below those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$6,834,357	$6,985,947
Previously reported	316,592,289	283,285,404
Since January 1	$323,426,646	$290,271,351

Silver.

Quotations for bar silver, both in London and here, were slightly depressed on the result of the election. The London price fell off from 30d. to 29 13/16d. per ounce, while in this market commercial bars declined from 65c. to 64½c. On last Wednesday silver bullion certificates, which had been quoted 65⅝ on the Stock Exchange, were decidedly lower on apparent liquidation, touching 62½, but rallied almost immediately to 64½, and touched 65¼ before the week ended. The total trading in this class of silver values amounted to 341,000 ounces.

The New York Banks.

Considering the pressure upon the money market during the week which it covered, last Saturday's statement of bank averages was not as unfavorable as might have been expected. The item of specie displayed an increase of $2,500,000, due to the current imports of gold, while legal tenders were reduced only $500,000, in the face of the large demand for them for the purpose of drawing gold from the Treasury. As the result of these changes the total cash holdings decreased a little less than $2,000,000. The most important features of the statement were, however, the reduction of $2,000,000 in deposits, and a contraction in the average of loans to the extent of $3,800,000. As a result of the other changes, the surplus reserve increased $2,500,000. The figures of the statement compare as follows with those of the preceding week:

	Oct. 24, '96.	*Oct. 31, '96.*	*Changes.*
Loans	$450,119,500	$446,250,400	Dec. $3,869,100
Specie	60,232,300	62,778,000	Inc. 2,545,800
Legal tenders	66,849,300	66,296,600	Dec. 552,700
Deposits	448,482,800	446,445,900	Dec. 2,036,900
Circulation	20,510,600	20,495,800	Dec. 14,800
Total reserve	127,081,600	129,074,700	Inc. 1,993,100
Reserve required	112,120,700	111,611,475	Dec. 509,225
Surplus reserve	14,960,900	17,463,225	Inc. 2,502,325

At the corresponding period last year the surplus reserve was $17,594,400, against $63,204,275 in 1894.

THE STOCK MARKETS.

The New York Stock Market.

A decided feeling that the sound-money candidate would carry the country asserted itself in the stock market before the election. The extreme high rates for money were therefore no bar to professional purchases on a large scale last Saturday and on the Monday preceding the election. The uncertainty of the situation discouraged bear selling, and prices accordingly closed on Monday night at a considerable advance, although money had that day commanded ¼@½ per cent. commission plus legal interest. On Tuesday evening, when the returns made the result at the polls sufficiently plain, large buying orders were cabled to London. Some estimates put the orders at as high as 100,000 shares of stock, and it would seem that orders for about 50,000 were executed. This, with the natural relief which London experienced at the news, caused a general advance in the American department. When our own market opened on Wednesday morning it was in a decidedly enthusiastic mood, and the first quotations were from 2 to 7 points above the close on Monday. The disposition of the professional element to take profits on purchases made prior to the election was marked, and prices promptly receded from the opening. This selling was, however, met by purchases by interests which had kept out of the market over the election, and by a fair volume of commission-house purchases, the fact that money was once more easy at 6 per cent. and that the hoarded gold was coming out with a rush supplementing the favorable effect of the sound money triumph. On Thursday, however, the market seemed to be under a reactionary influence. The fact that the sound money majority in the electoral college was not quite as large as the earlier reports indicated, and that some states were in alleged doubt, produced caution and hesitation, while rumors of possible intervention by our government in Cuba resulted in the further liquidation of long accounts, and induced more or less bear selling, the net result being a considerable reaction on the market. Friday, however, brought a renewal of bullish sentiment. The acknowledgement of their defeat by the silver candidate and leaders was well received, and the Cuban war scare was shown to have little foundation. The feature was the appearance of heavy outside buying orders, and the covering of the short contracts made the day before aided in causing further marked advances.

Conservative opinion on the "street" was not at fault in relation to the irregularity which the market has exhibited. It has been pointed out that the result of the election had been discounted to a large extent, and that the revival of business confidence and activity is a slow process. The fact that London, while taking a very cheerful view of the election here, has not developed a marked demand for our securities, is also a factor, and it may be further said that the reassertion of a decided public interest in stock speculation is slow work. It is argued that as the general conditions throughout the country improve the stock market will tend to reflect them.

The activity of the market has been notably increased. Among other developments is the large volume of trading in bonds and the general character of the advances in the bond list. Governments were strong, and the new 4s rose from 116⅞ to 120¼. Railroad mortgages, both of the inyestment and the speculative classes, are generally in increased demand, with a corresponding effect in their prices. A further gratifying indication is that since Wednesday some of the cities whose bonds have been vainly offered during the last two months were promptly absorbed, and it is believed that the $16,000,000 of New York city 3½s, for which bids will close on Monday, will be fully subscribed for.

Prices for active stocks have generally followed the course described in the opening paragraph. Some stocks, however, have shown individual tendences. Sugar, for instance, opened on Wednesday at from 125 down to 121, an advance taking the extreme quotation of 7 points. It vibrated actually around 122, and on Thursday sold down to 116½, but rallied to 121, though in Friday's advance the stock seemed to be for sale and failed to act in sympathy with the list. Chicago Gas has been a very strong feature. It rose from 70¾ to 78½, and had good support not only on the defeat of Governor Altgeld in Illinois, but on the declaration of a dividend of 1½ per cent. for the current quarter. Manhattan, which sold up to 98, was another strong feature, and Reading reorganization certificates held strong at between 30@31½. Bay State Gas has been favorably affected by the retirement of the Addicks party from control and the transfer of the property to interests identified with the Standard Oil organization. American Tobacco was another strong stock, rising to 84, the explanation of which came in the form of a 4 per cent. dividend on the common. The usual features of the railroad share list were all strong, including St. Paul, Burlington, Louisville and Atchison, the latter rising to 16¼ for the common stock on the face of news that legal action had been taken against the company in Kansas.

General Mention.

J. P. Morgan & Company, as reorganization managers of the Philadelphia & Reading Railroad Company, under plan and agreement of December 14 last, give notice that all holders of certificates of deposit of securities included in said plan who have failed to make payment of any assessment, and who shall not do so before November 26, shall cease to be parties to the said plan and agreement and will, without further notice, absolutely forfeit their securities with any part of the assessment paid. In every such case the managers may sell such securities deposited, and all right in the cash theretofore paid, or the new securities which may be issued therefor to any purchaser, being such amount as the managers may determine, will be used for any of the requirements of carrying out the said plan, and as a reserve for the uses of the new company in the discretion of the managers. Payments hereunder may be made at the offices of J. P. Morgan & Company, Drexel & Company, Philadelphia, or J. S. Morgan & Company, London. In addition to the above, the bankers heretofore named announce that up to November 26 they will continue to receive deposits on payment of the assessments in full with 6 per cent. interest and a penalty of $20 per $1,000 general mortgage bond, first, second or third preference income mortgage bonds; $1 per share of stock, and 50c. per $1,000 deferred income bond. After November 26 no further deposits will be received under the plan of reorganization.

Boston Stock Market.

The results of the election are seen in higher prices, although the close shows a quieter tendency, with some decline from the top. Values are generally higher than a week ago, Atchison showing a gain of 2½ points, with Chicago, Burlington & Quincy 6⅜ points higher. Boston & Montana advanced 6½. Sugar has rul ed high, and closes at 6 points advance. Bay State Gas advanced to 13, and closes 3½ points above a week ago.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE REVIVING.

BETTER DEMAND FOR IRON, COTTON AND WOOL, LOWER RATES FOR MONEY, AND RENEWED ACTIVITY IN TEXTILE MILLS AND OTHER INDUSTRIAL ESTABLISHMENTS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, November 6.—The result of the election lends a more confident feeling, and the tone of values is generally firmer. The market has not got started on the new basis as yet, and business for the past few days has been slow, due in part to the stronger feeling of sellers. The money market outlook favors lower rates. Call money is quoted at 6 per cent., with 4 months' loans at the same price. Mercantile paper is quiet at about 6@7 per cent. The boot and shoe market is firm, with a fair volume of orders for spring being booked, while prices are stronger. Leather is firm but rather quiet, with hides in light supply and kept closely sold up. Iron and steel are showing more tone, while the lumber market is quiet but firm.

Providence, November 6.—The result of the election has led to an increased confidence in the future of trade and to preparations for a larger output. Orders which were contingent on the election are

now being filled, sales of this character having been quite numerous, especially in such lines as lumber, jewelry, etc.

Philadelphia, November 6.—Neither in wool nor dry goods is there any change from the dullness that has characterized affairs for some time past. It is too early to see the results to follow the result of the election. Leather continues weak and slightly lower. Boots and shoes show increased demand, with fair prices and better collections. The feeling in the iron trade is that prices will gradually stiffen, although the season is too far advanced to hope for any decided improvement.

Pittsburgh, November 6.—General business has been practically at a standstill, owing largely to the uncertainties regarding the campaign, but now that the election is over it is believed a reaction will set in, and, while no boom is anticipated, a general improvement is expected in all lines. Pig Iron is 25c. higher. Sales are larger than last week, but the market remains firm, and the trade generally are reassured by the outlook.

Baltimore, November 6.—Business for the past week has been at a standstill, owing to the election, but the success of sound money has lent tone to business affairs, and merchants feel hopeful for the future. Business is expected to revive very soon.

West and Northwest.

Cleveland, November 6.—Business during the first half of the week was comparatively light, the intense interest in the election being the overshadowing feature. In all financial and commercial departments the tone of business has already improved, and, although the season is far advanced, the outlook now for continued improvement is regarded as very encouraging.

Detroit, November 6.—A better feeling prevails in bank and business circles generally. An improvement is looked for. Collections are fair.

Chicago, November 6.—Renewed confidence, the first step in the way of increased business activity, has been established by the election. Trade is not active, as the change from comparative quietness to great animation cannot be expected within a few days. Sales are liberal in volume, are expected to increase gradually, and are about equal to those of last year. There is more disposition on the part of manufacturers and jobbers to do business, but none look for a boom until the effect of the election wears off and all settle down to work. Prices on everything are showing a hardening tendency, but few important advances are noticeable. Pig iron is 25c. to 50c. higher than ten days ago for northern coke, sales of between 15,000 and 20,000 tons being made for next year's delivery. No. 1 foundry is held at $11.50 to $11.75, and No. 2 at $11 to $11.50. Charcoal irons are unchanged. The Joliet works of the Illinois Steel Company have started up on steel rods and billets. Orders are more numerous. Large sales might be made were manufacturers willing to make prices for delivery beyond January 1. Their indisposition to sell is due to the belief that prices will be higher with the new year. A good business is being transacted in iron cotton ties with the south, a new feature with manufacturers here. Lumber is fairly active, and white pine 25c. to 50c. higher on common grades. Building prospects are favorable for the investment of $20,000,000 within the next few years. Produce trade is slow. Wool receipts, 475,721 pounds. Election has created confidence among bankers, and they are loaning money freely to parties refused previously. Northwestern elevator people have been good borrowers during the past few days. Deposits are increasing, and money recently hoarded is being returned to savings banks. Collections are good.

Des Moines, November 6.—General wholesale and retail dealers are much pleased over election, and business interests are much encouraged over the results. Everyone is pushing business now.

Louisville, November 6.—On account of the political influences very little business has been done. The result of the presidential election is believed to be conducive to a gradual improvement in all departments of trade, and a better feeling exists generally.

St. Louis, November 6.—The result of the national election is eminently satisfactory to the various business interests, and the outlook is bright. Business for the major part of the week has been practically at a standstill, all interest being centered in politics. Leading staples, as heretofore, are in fair demand. A large number of travelers have already started on the road with every assurance of a large winter and spring trade. Demand has improved in many lines, notably iron and steel, and there is a decided tendency to cover future requirements at present values. As a rule, however, prices are hardening, and figures are quoted for early shipment only. Bankers report increased deposits and demand for money. Shipments of boots and shoes for the year, up to date, show an increase of about 20 per cent. over same period last year.

Kansas City, November 6.—A general complaint of poor business is voiced by all wholesale and retail dealers. Collections are very slow.

Milwaukee, November 6.—As yet no improvement in trade is noted, though merchants and manufacturers feel more hopeful for the future as a result of the election. Collections are slow.

Minneapolis, November 6.—Business has been very quiet during the past week because of the election, but some improvement is now looked for, although it is too late in the season to expect any considerable increase. The result of the election is manifested in a return of confidence, the appearance of gold in banking transactions daily and a lower rate of interest. Several lines of business report the shipping of orders which were contingent on the result of the election. Prices of lumber are firmer. Flour is active.

Duluth, November 6.—The announcement of the result of the election has had a very invigorating effect upon trade, as is evidenced by the receipt of unusually large orders from country merchants which were contingent upon the result. Gold again appears in circulation, some banks paying smaller checks with that metal exclusively, and a general restoration of confidence is manifested.

Omaha, November 6.—Business has been practically suspended on account of the election, and trade in only a few lines has been even normal. Collections have been bery slow.

Sioux Falls, November 6.—Trade in all lines is quiet. Collections are good.

Southern Cities.

Charleston, November 6.—A considerably better feeling is observed since the success of the sound-money candidates. Collections since election are a great deal easier. There is no material change in trade.

Savannah, November 6.—Trade on Tuesday was very dull, but that during the rest of week was fair. Collections are slow. Naval stores receipts and shipments have fallen off. All grades of rosin have advanced. Spirits have advanced ⅞c. gallon. There is a steady demand for both.

Atlanta, November 6—Sales are good, but collections are not so good on account of the decrease in the price of cotton. Merchants, as a rule, seem satisfied with the result of the election.

Augusta, November 6.—Trade this week has been quiet, owing to the election and rainy weather. Fertilizer notes given last spring and all falling due November 4 have been met promptly. Farmers to a large extent have met their obligations better this fall than for a number of years past. General satisfaction on part of business men is expressed at the result of Tuesday's election, and the belief is trade will materially improve in all lines.

Jacksonville, November 6.—Trade and collections are very dull, due to election.

Birmingham, November 6.—There is a decidedly better feeling, due to the results of the election. Iron is stronger in price, and general business is looking upward.

Chattanooga, November 6.—Business is quiet. Merchants believe there will be an immediate revival.

Memphis, November 6.—General trade has been dull, but an improvement is looked for next week on account of the sound money victory. Collections are fair.

Nashville, November 6.—Trade this week is very quiet, owing to election. Sentiment is favorable to a steady improvement from now on.

New Orleans, November 6.—Notwithstanding the election excitement general trade has been fairly brisk. The result promises an easier money market and an increased trade. The cotton movement is heavy, and exporters have taken largely. Receipts of new crop sugar are steadily increasing, but the market has strengthened. Rice is inactive. There is a good demand for commercial discounts.

Galveston, November 6.—Business in all lines has been at a standstill throughout the week, and is not expected to resume activity before next week.

Pacific Coast.

San Francisco, November 6.—Few changes are reported in commercial lines. The produce and fruit market is fairly active, grapes are plentiful and cheap, wool and hops are in better demand and prices firm. Collections are slow.

Portland, November 6.—Rains and cooler weather have been followed by increased sales of seasonable goods. The wheat movement is slower. About 25 per cent. is still in farmers' hands. Prime hops are in good demand, and medium grades are selling at fair prices, ranging from 7c. to 11c. Groceries and products are steady, with better tendencies.

Tacoma, November 6.—General trade is quiet. Wheat is active, this being the largest week's operations known here. Exports for October are valued at $1,098,000. Exports for ten months this year show an increase exceeding $2,000,000 compared with the same period last year. Imports have decreased.

Seattle, November 6.—Trade is rather quiet. A large consignment of salmon and tallow has been shipped abroad this week.

Canada.

Toronto, November 6.—Wholesale trade in merchandise is quiet. The weather is unfavorable and orders are confined to small parcels. Payments are rather better.

Montreal, November 6.—Trade in most lines has been quiet and featureless, although collections have improved somewhat. The result of the election in the United States has inspired a better feeling here, with the expectation of an improvement in business shortly. Quebec City advices report a slight improvement in general trade. Shoe manufacturers state orders are coming in more freely, with easier collections.

Halifax, November 6.—The general condition of trade in the local market is unchanged, and the volume of business is light. Collections are slow. St. John, N. B., reports the indications are that the lumber cut will be as large as last year, if not larger. Shipments of lumber to British ports last week were large, but those to the United States continue comparatively small. The price of Newfoundland fish has dropped considerably, and this will, no doubt, further accentuate the depression.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM OCTOBER 24, 1896, TO OCTOBER 30, 1896, INCLUSIVE.

Dry Goods.

The market has ruled rather quiet as a whole, but the tone is firmer at the close. Cotton goods are firmer, and values are higher in many instances. The mills are quite well employed, and have better expectation of selling their product. Printed fabrics are going quite well for the season, while new patterns for spring are being shown with good success. Dress woolens are selling in a moderate way for spring, although now that the election is over a good demand is expected. Some mills have already taken considerable orders. Men's-wear woolens are showing more tone, with the prospect for a better demand for higher-cost fabrics. As yet spring orders have been largely confined to low-cost stuff.

Wool.

The result of election has tended to harden values on all kinds of wool, but as yet buyers have not taken hold freely. Buyers have purchased considerable wool at the lower values ruling, and larger operators are now in position to wait until goods are sold. The price of territory wools are quoted at 31@32c. for scoured fine medium and fine, with choice staple lots at 33@35c. This is a sharp advance over two months ago, when the same wool was sold at about 25@27c., more at the inside price for cash on round lots. Fleeces are quoted firm, but sales have ruled slow, while offerings are moderate. Pulled wools are doing better, and are quoted higher. Australian wools are in good demand and quoted higher, the stronger markets abroad making holders more confident. Carpet wools are quiet, but values are very strong all along the line.

THE COFFEE SITUATION.

The *American Grocer* says: "The crop of 1896–97 is a demonstration of the extent to which a period of high prices has stimulated production. The area devoted to coffee has been rapidly extended in Brazil, in Central America, United States of Colombia, Venezuela and Mexico. Coffee growing is a profitable industry when coffee sells in New York at prices considerably below a basis of 10¾c. for No. 7 Rio. At the prices of the past five years planters have been receiving enormous profits.

"It is apparent that we have entered a period of low cost. A decline has taken place of over 5c. per pound in the cost of Brazil sorts, and the question is whether this fall in the price has fully discounted a supply largely in excess of the world's requirements. The answer will be found in the estimated outturn of the 1897–98 crop. If that is up to or above the average supply, then there is a chance for lower prices. If the next crop is to be light in Brazil, it would seem as if the present basis was near bottom.

Messrs. W. H. Crossman & Brother estimate "an enormous crop in Brazil for 1896–97, viz, a total export of not less than 8,000,000 bags. This is a total far beyond the yearly average for seven years, ending June 30, 1896, of 5,657,286 bags (332,781 tons). In 1891–92 Brazil exported 7,267,000 bags, and it is certainly not unreasonable to estimate that the exports from the largest yield on record should exceed the shipments of 1891–92 to the extent of 733,000 bags. Brazil has furnished 54 per cent. of the world's supply. On that basis the crops of 1896–97 will aggregate 14,814,800 bags." The estimate for the total crops is 14,000,000 bags, "based on a minimum Brazil yield of 8,000,000 and 6,000,000 for other countries, or about 500,000 bags above the average crops of the past three years.

"The total deliveries in Europe and the United States for five crop years ending June 30, 1896, were 54,677,976 bags, or a yearly average of 10,935,595 bags. Hard times curtail the use of coffee, especially if prices rule high. There has been no increase in the deliveries of coffee worthy of note since the advent of high prices, as the following table of deliveries in Europe and the United States shows:

Year.	Bags.
1895 06	11,142,813
1894-95	11,212,851
1893–94	10,571,533
1892–93	10,946,228
1891–92	10,804,551
Total five years	54,677,976
Yearly average (643,270 tons)	10,935,595

"The above shows the steady nature of the world's requirements, which is subject to other than crop influences. Hard times and high cost cut down the demand. With a return to prosperity, the United States should increase its consumption of coffee at least 400,000 bags. Last year the deliveries fell below 1894–95 here and in Europe, but to slight extent." This shows the fairness of the estimate of requirements, viz., 11,500,000 bags, "to meet which there is an estimated supply of 14,000,000 bags." * * * "The outlook for the 1897–98 crop is favorable for a full average yield. If it should duplicate the suply of 1896–97, we cannot see how it can fail to foster and maintain an era of cheap coffee. There is certainly no basis in sight upon which to carry forward a bull campaign. We have arrived at a time when it is fairly safe to carry liberal stocks, and the lower prices go the safer the operation of buying freely."

THE BRITISH IRON INDUSTRY.

The London *Economist* says: "According to returns which have been prepared by the British Iron Trade Association, the output of pig iron during the first half of the present year has been larger than that of any previous half year in the history of the trade. The total make of pig iron in Great Britain for the first half of 1896 amounted to 4,328,444 tons, which is at the rate of 8,656,888 tons a year. This shows an advance of over 607,000 tons on the pig-iron output of the first half of last year, which amounted to 3,721,000 tons, and the increase appears to be pretty fairly distributed over all the leading pig-iron producing districts, including especially Cleveland and Scotland. The principal districts compare as under:

	—Tons— First half 1896.	First half 1895.
Cleveland	1,600,960	1,459,672
Scotland	620,000	480,380
Cumberland	352,059	307,996
Lancashire	309,044	260,560
South Wales	398,985	331,368

"It will be noted that the principal advance has taken place in Scotland and Cleveland, but it is to be remarked that this advance is not altogether a function of the increase in the number of furnaces in blast, but is also largely due to better results being obtained in the methods and plant employed. The total number of furnaces employed during the first half of the current year was 359, as compared with 339 for the first half of 1895. At both periods there was a very large unemployed blast furnace plant in existence, the total number of inoperative furnaces at the end of June, 1895, being 348, whereas at the end of June of the current year it was 307. There is a constant tendency to decrease the number of unproductive furnaces, either by dismantling them entirely or by bringing them up to modern requirements, which latter is generally a costly process.

"The stocks of pig iron held in the United Kingdom at the end of June last, disregarding makers' stocks in Scotland, which have not been ascertained, amounted to 1,216,757 tons, which is an increase of 122,145 tons on the stocks held at the end of December. The increase principally appears in the stocks of iron held in the Cleveland district and in Scotland. The principal items are as under:

Tons.	June 30, 1896.	December 31, 1895.
Cleveland	345,525	300,344
Scotland	305,189	282,172
Cumberland	344,500	203,507
Lancashire		78,003

"In all the other districts the stocks are so nominal that they do not call for further remark. On the whole, it may be stated that in relation to the extent and rate of production, the stocks are not unusually heavy—on the contrary, in some districts they are exceptionally light—and it is one of the most encouraging features of the industrial situation that so much iron is going into consumption.

"Although the rate of output of pig iron for the first half of the current year has exceeded that of any previous six months, the annual output has on four previous occasions exceeded 8,000,000 tons, in 1881, 1882, 1883 and 1889. The largest output in any one of those years was 8,586,000 tons in 1882, which has, consequently, held the record for our own country up to the present time. So far as can be judged at present from the furnaces in blast during the second half of the year, the total output for the current twelve months will not be much, if any, short of 8,750,000 tons, but it is, at any rate, to be expected that it will exceed that of 1882, and will thus break the record. It is hardly necessary to add that we now speak of the United Kingdom alone, seeing that in the United States the output of pig has several years exceeded 9,000,000 tons, although it is not expected to go above 8,500,000 tons for the current year.

"The great bulk of the iron now being produced in Great Britain is being consumed in the manufacture of steel, of which it is estimated—having regard to the ascertained output in the first half of the year—that about 4,000,000 tons will represent the British production for 1896. This large output would absorb about 4,500,000 tons of pig iron, and leave a little over 4,000,000 tons for other purposes. Of this latter quantity we generally export about 1,000,000 tons as pig, and the 3,000,000 tons that remain will be chiefly used in malleable iron works, which continue to produce over 1,000,000 tons of puddled iron annually, and in foundries, etc. The most notable feature of the recent growth of the trade has been the greatly increased demands made by the steel industry, and especially by that branch distinguished as the open-hearth steel trade, which is now producing about 2,000,000 tons a year. This industry has chiefly become located in Scotland and the north of England, but it is now extending in south and north Staffordshire, Lincolnshire, south and west Yorkshire and other minor districts, and it promises before long to leave the Bessemer steel manufacture far behind. It is satisfactory to be able to add that the most competent authorities are agreed in looking upon the equipment of our open-hearth steel works as at least equal to anything of the kind in any part of the world.

"The recent outcry as to foreign competition invests with a special interest the fact that up to the present time the United Kingdom has made a greater advance in production than any other country has done in the current year. Our increase of output for the first half of the year was at the rate of over 1,200,000 tons a year, which is believed to be more than the increase of output likely to be shown by all other European countries put together, although that cannot be positively asserted until the returns of all the different countries are made up. But, however we may compare with our competitors, we have, at any rate, made an advance of which we need not feel ashamed, and which should afford renewed encouragement to those who had become disheartened by the apparent success of our rivals."

GOLD PRODUCTION OF 1896.

The Washington correspondent of the New York *Journal of Commerce* wires to that paper as follows: "Mint Director Preston has not modified his estimate that the gold production of the world for the calendar year 1896 will be $220,000,000. This is in the nature of an inside estimate, but Mr. Preston always prefers to keep within such limits rather than to predict a larger production than may be shown by the final figures. The production of the world for 1895 was $203,000,000. This itself was a record-breaking total and represented an almost steady annual increase since 1890, when the production was $118,848,700. Several influences have operated to diminish production during the present year, from the political troubles in South Africa to the strike of the miners at Leadville and Cripple Creek, but all these influences have not prevented an increase in nearly every leading country where gold is produced. Modern machinery and the stimulus to gold production afforded by the silver chatter about the scarcity of gold have been felt throughout the world, and each of the leading countries appears to be competing with the other for swelling the aggregate product. The United States will show a production of not less than $50,000,000 for 1896. South Africa will probably show an aggregate of about the same amount, making the contest between the two countries a close one for primacy in gold production. Australia, which has often stood at the head, was crowded out of place for 1895 by the United States and South Africa. Australia will show some increase for 1896, but not so much as the other leading countries. Her total production will probably be about $48,000,000, which will leave her slightly behind her two great rivals.

"While the gold production of the United States is estimated out of abundant caution at $50,000,000, it will not be surprising if it is several million larger. Colorado will show this year a production of from $16,000,000 to $17,000,000, California will show a nearly equal aggregate, Montana will produce $4,000,000 to $5,000,000, South Dakota $4,000,000 to $4,500,000, and Utah and Alaska will make large gains. The mint officials have not been seeking special reports from these states, but are governed by what they see in the public prints and by the actual increase in deposits of gold bullion at the mints. Alaska is likely to show a production running close up to $1,000,000 during the current year. If the United States should figure among producers to the amount of $54,000,000 it might raise the total for the world to $225,000,000. Mexico may have contributed to swell the production of the United States in past years by means of the smuggling of gold across the border for the purpose of escaping the Mexican export duty. Efforts have recently been made by Director Preston to correct these errors and to assign to Mexico her proper place as a producer of the yellow metal. This correction will be made in the official statistics for 1895, and the production for 1896 will show an increase of from $1,000,000 to $1,500,000. Nearly all the gold produced in Mexico is exported, and a large part of it comes across the border to American refineries.

"The Russian empire is developing some important gold fields which will probably contribute an increase of $5,000,000 for the current year over the recorded production of 1895. The Russian government requires all gold produced in the empire to pass through the Russian mints, and has been endeavoring to concentrate the gold of the country as largely as possible in the public Treasury and in the Bank of Russia. The new gold fields are in Siberia, in the Lena Delta, and are being worked by French companies which have secured concessions from the government. The return of peace in China and Japan will contribute to an increased production of gold in those countries. It has been found difficult to obtain accurate statistics of production in China. Reliance has been placed mainly on the import and export statistics, showing a balance of exports resulting from home production. The statistics for Japan are more easily obtained, and are usually furnished officially by the Japanese government and included in some of their admirable statistical reports. Corea will probably show some increase of production during the current year, but statistics usually come slowly from that country. The silver production of the world is not quite so closely followed at the Mint Bureau as the gold production, but it is believed that the total for the world and for the United States for 1896 will be about the same as for 1895. The figures for the United States are estimated at 57,000,000 ounces."

MINERAL PRODUCTION OF INDIA.

The London *Times* says: "From Dr. Watt's review of the mineral production of India for the past year it appears that the production of coal, though increasing rapidly, is not keeping pace with the consumption. Last year the production was 4,370,000 tons, or just 55 per cent. more than the previous year (ten years ago the production was just 1,250,000 tons), but the import of coal was 800,000 tons, the largest on record except one year. Dr. Watt reminds us that coal is not used for domestic purposes, and this growing production and importation show growing industry. The iron industry, on the other hand, progresses very slowly, the product last year being only 46,000 tons. The furnaces are almost wholly confined to Bengal and to those places where coal is abundant in the immediate neighborhood of the ore, and where smelting can be carried on by European methods. In the central provinces ore exists in abundance, but the smelting is primitive and there are no authentic statistics. In Madras there is abundance of ore, but no fuel, while in Bombay there are both ore and fuel, but enterprise has not yet been systematically directed to smelting. The production of petroleum is almost entirely confined to Assam and Burma. The Burma oil wells last year produced 19,000,000 gallons—a considerable increase over any previous year—and in Assam the already small production decreased. The import of petroleum to India last year was 53,500,000 gallons, against 86,500,000 the previous year. The gold produced was a little under 250,000 ounces, valued at 175 lakhs of rupees. Mysore contributed the whole of this except a couple of thousand ounces. The Mysore mines cover an area nine miles long, worked by eleven companies, which give employment to over 13,000 men. There are 60 shafts, varying in depth from 30 feet to nearly 1,500 feet. The value of the gold produced in India is considerably more than that of the coal. Of diamonds only 215 carats were produced last year, valued at less than 20,000 rupees. Jade is the most important Indian precious stone in a commercial sense; the value of last year's production was 4½ lakhs, and of Burma rubies and sapphires nearly 3 lakhs. Salt, however, is the most important of all the mineral products of India; last year it amounted to 1,069,000 tons, which considerably exceeds the average for the past five years."

INDIA'S DEMAND FOR WHEAT.

A Simla telegram to the London *Times* says: "The news that California wheat is being shipped to India in view of a famine here was not altogether unexpected. Merchants must have known that food stocks had fallen low throughout the upper and central parts of India. The wheat-eating population is very large in the Northwest Provinces and the Punjab, and grain dealers have raised prices so much as to cause serious popular discontent. This shows itself in the form of grain riots in various towns. The best news we could receive now would be that twenty or thirty cargoes of wheat were being shipped from North and South America. The immediate effect would be to steady the market and check a further rise, while the actual arrival of the cargoes would cause the native grain dealers to lower their prices. The distress which now exists is confined to well-defined areas, but if no rain falls before November the area likely to be affected by the failure of the cold weather and spring crops will be of an enormous extent. The Punjab, the Northwest Provinces, Oudh, Central India, the Central Provinces, Berar, and parts of Behar, Rajputana and Bombay, will all be affected. In short, everything depends on rain within the next three or four weeks, and at present there are no signs that a fall will occur. In connection with the question of food supplies some remarks on the export of wheat by the director general of statistics in his annual review of trade just issued are interesting. Taking the last fifteen years and dividing them into three-year periods, he shows that the trade has undergone contraction since 1887, when over 22,000,000 hundredweight were exported. In 1891–92 the export touched the high figure of 30,000,000 hundredweight, but this was an exceptional year. In the last triennial period ending March 31 of this year the export has fallen below 10,000,000 hundredweight."

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

REORGANIZATION OF

Philadelphia & Reading Railroad Company

AND

Philadelphia & Reading Coal & Iron Co.

UNDER PLAN AND AGREEMENT DATED DECEMBER 14, 1895.

23 WALL STREET, NEW YORK, November 6, 1896.

Notice is hereby given that all holders of certificates of deposit of First, Second, or Third Preference Income bonds, Deferred Income bonds, or Stock of the Philadelphia & Reading Railroad Company, under the said Plan and Agreement, who have failed to make payment of any assessment payable as heretofore called under said Plan, and who shall not before November 26, 1896, make payment of all such assessments due thereunder (together with six per cent. interest upon the amount thereof from the several dates when such assessments were due and payable), and also a further sum equal to one-quarter per cent. upon the par value of such bonds or stock deposited, will, upon November 26, 1896, without further notice or action, cease to be parties to the said Plan and Agreement, or to be entitled to any benefit thereunder or in the securities deposited or assessments paid, and will without right of redemption absolutely forfeit their bonds or stock deposited, together with any part of the assessments paid. In every such case the Managers may sell such bonds and stock deposited, and all right in the cash theretofore paid in respect thereof, or the new securities which may be issued in respect thereof, to any purchaser paying such amount as the Managers may determine, and the proceeds thereof will be used for any of the requirements of carrying out the said Plan, and as a reserve for the uses of the New Company, in the discretion of the Managers.

Payments hereunder may be made at our office, as above, or at the office of Drexel & Co., Fifth and Chestnut Streets, Philadelphia, or of J. S. Morgan & Co., London.

J. P. MORGAN & CO.,
Reorganization Managers Philadelphia & Reading Railroad Company, under said Plan and Agreement.

TO THE HOLDERS OF

Philadelphia and Reading Railroad Company's

General Mortgage Bonds,
First, Second, and Third Preference Income Bonds,
Deferred Income Bonds,
Stock.

NEW YORK, PHILADELPHIA, AND LONDON, November 6, 1896.

Referring to our circular of May 6, 1896, notice is hereby given that after November 26, 1896, no further deposits of the above-described bonds and stocks will be received under the plan of reorganization.

Deposits will be received up to that date, but only on payment of the assesssments in full, with six per cent. interest from the dates when the several instalments were due and payable, and a penalty of

$20.00 per $1,000 General Mortgage Bond and First, Second, or Third Preference Income Mortgage Bond:
$1.00 per share of Stock;
.50 per $1,000 Deferred Income Bond.

DIVIDENDS.

THE AMERICAN COTTON OIL COMPANY.

DIVIDEND NO. 10. PREFERRED STOCK.

No. 46 CEDAR ST., NEW YORK CITY, Nov. 6, 1896.

The regular semi-annual dividend of THREE (3) PER CENTUM upon the outstanding Preferred Capital Stock of The American Cotton Oil Company has this day been declared out of the net profits of the Company, payable on the 1st day of December, 1896, at the Bank of Messrs. Winslow, Lanier & Company, No. 17 Nassau Street, New York City, to the holders of record of such Preferred Stock, upon the closing of the Preferred Stock Transfer Books.

The Stock Transfer Books of the Company will be closed on Thursday, the 12th day of November, 1896, at 3 o'clock P. M., and will remain closed until Friday, the 4th day of December, 1896, at 10 o'clock A.M.

By order of the Board of Directors.

JUSTUS E. RALPH, Secretary.

MEETINGS.

NEW YORK OFFICE OF

THE AMERICAN COTTON OIL COMPANY

No. 46 CEDAR STREET, NEW YORK CITY, November 6th, 1896.

The Annual Meeting of the Stockholders of The American Cotton Oil Company will be held at the principal office of the Company, in the state of New Jersey, the Refinery, near Guttenburg, in Union Township, Hudson County, on Thursday, the 3d day of December, 1896, at 12 o'clock noon, for the purpose of electing Directors and for the transaction of such other business as may properly come before the meeting.

The Preferred and Common Stock Transfer Books of the Company will be closed on Thursday, the 12th day of November, 1896, at three o'clock P. M., and will remain closed until Friday, the 4th day of December, 1896, at ten o'clock, A. M.

By order of the Board of Directors.

JUSTUS E. RALPH, Secretary.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 14, 1896.

Owing to the singular closeness of the election in some of the states it has been, up to the present time, impracticable to determine with absolute exactness the extent of the successful candidate's majority in the electoral college. It has apparently been determined on complete though unofficial returns that Kentucky has chosen McKinley electors by a plurality of 250 or so. South Dakota, on the other hand, appears to have chosen Bryan electors by a still narrower margin, 25 or 30 votes. Wyoming appears to be still in doubt, though the first presumption that McKinley electors have been returned there may stand until more complete returns have been received. The margins in the states mentioned was, of course, known from the first not to be large, so that the changes which later returns have made in the pluralties are comparatively trifling. Revised figures of the congressional elections seem likely to reduce the majority of the sound money men in the House of Representatives, while the precise camplexion of the Senate remains still to be determined.

What the future of the free-silver agitation will be remains yet to be seen. Mr. Bryan, it is true, has declared that the work of agitation is to be carried on, and he has accepted an engagement to deliver an address to organizations favorable to silver in his own town in which he is expected to outline his future line of policy and that of his party. This pronouncement will be awaited with some interest. Senator Teller, on being asked this week whether it would be possible to pass a tariff bill throuh the coming Senate without a free silver rider, said that it would be very impolitic for the silver men to show their hands now and make their intent plain to their opponents. Meanwhile, the leaders of the Bryan party in the east have been very careful to avoid being quoted in regard to the future action of the party. Many of them, as is well known, while supporting at least ostensibly the nominees of the Chicago convention, took that attitude, not because they were desirous of seeing a free coinage policy adopted, but in order to retain their hold upon the party machinery.

Advices from Washington indicate that the revised international rules to prevent collisions at sea which were formulated by the Washington International Marine Conference may go into effect on July 1. It appears that the officers of the State and Treasury Departments have been working to this end since the adjournment of Congress, and that Great Britain is coöperating with the United States in securing the assent of the nations which have not as yet formally announced their adhesion to the rules. The nations which have thus far agreed to adopt the rules and enforce them after July 1 are Great Britain, Germany, France, Denmark, Russia, Italy, Portugal, Austria, Belgium, Spain, Hawaii, Japan, Mexico, Guatemala, Chili and Honduras. These nations, with the United States, control 22,000,000 tons, or more than five-sixths of the world's shipping, while the important nations whose assents have not yet been received are Norway, Sweden, the Netherlands, Brazil and Turkey, controlling about 3,000,000 tons of shipping.

A strong representation of the agricultural interests of the country appeared at the Farmers' National Congress, at Indianapolis, this week. Among other things, the meeting adopted a memorial to Congress asking that body to see to it that no trusts are organized that can extort exorbitant prices for farm products, favoring the protective policy, and suggesting, in reference to wool, amendments to the Dingley bill, providing that the "skirting" clause of the act of 1890 shall not be applicable to the bill, that the pledge therein, that it shall continue in operation "until August 1, 1898," shall be stricken out; that the duty on woolen rags, shoddy, mungo, flocks, nocks, wartes, and other adulterants shall be made prohibitory, and that wool and woolen manufactures imported under its provisions shall not remain in bonded warehouses more than ten days. This memorial was not adopted without dissent, however.

One of the features of the proceedings was a thoughtful address by ex-President Harrison, in which he pointed out the dangers of too exclusive a pursuit of class interests and the importance of recognizing the interdependence of classes in the existing condition of society. He said that it is a custom of the time for men of a particular occupation to associate themselves together, to develop and cultivate mutual interests. Such organizations, he said, are to be encouraged, but it must not be forgotten that lawyers, farmers and laborers all have interests, and that no one class should try to get the better of the other classes. When any men, engaged in a particular calling, from high motives associate themselves together and pursue those high motives in their association, only good can result. But, he said, people should not be selfish in their purposes. If, he continued, we were absolutely selfish in our purposes and thought only of our own good, the good of the class and of the individual of the class, we should find that good most highly promoted by taking a broad view of things, and by admitting to our deliberations the thought that it is not possible for one class to be highly prosperous while all other classes are suffering; that there is an interdependence in all our business and social relations, and that this is highly developed in a free government like ours; in other words, in a broad sense, we prosper together and we suffer together; we are interdependent. These are considerations which are of particular interest under present conditions, when there has been revealed an undeniable disposition in some quarters to make political capital out of alleged conflicts of interest between classes.

There has been a material decrease in the counterfeiting of paper money during the past year, according to the annual report of Chief Hazen, of the Secret Service. This, he thinks, can be accounted for by the large increase in "raised" or "altered" notes found in circulation, some of which are most skilfully executed. He attributes the facility with which the public are deceived by raised notes to the frequent changes in the designs of United States notes, which make it almost impossible for the public to become familiar with the currency. It is also made plain, he adds, that the distinctive paper in use is an aid to the criminal rather than a protection to the public, because of the fact that a note printed upon paper containing silk threads (as a number of the best counterfeits and all of the raised notes are) is accepted in a majority of instances without hesitation, owing to the erroneous impression that the paper used by the government is manufactured by a secret process and cannot be counterfeited. He has also become convinced that the introduction of silk into the paper tends to lessen its wearing quality, and is therefore responsible, to a degree, for its short life. The counterfeiting of gold and silver coins has been on the increase in all parts of the country.

The report of Inspector-General Breckinridge treats at length of the subject of military instruction among the colleges of the country. It is suggested that in all cases the officers detailed to duty as military professors therein be made members of the faculty in full standing to add to their influence and usefulness. During the past year there were matriculated in the 106 colleges having an army detail 40,560 male students, or an average of 372 per school. The total enrollments in the military department reached 19,435, a slight decrease per school. About 17,500 students of these have received military instruction. The reports show that in these schools there has been some gain in favor of military discipline. It is held that suitable uniforms of the fatigue style should be insisted upon for the students wherever practicable, and that more attention should be given to theoretical instruction in the science of war. Benefit, too, it is suggested, might be derived from the encouragement of competition between the cadets of the various colleges and schools.

The Supreme Court of Illinois has recently declared the Torrens land title transfer law of the state unconstitutional, upon the ground that the law conferred judicial powers on the recorders of deeds. The court held that it would be difficult to more clearly and positively confer judicial powers upon a person unqualified under the constitution to exercise those powers than is done by the law, a circumstance which doubtless resulted from an attempt to adopt the provisions of a similar law in force in Australia, Canada, England, and perhaps other countries, by which the certificate of title issued becomes conclusive as to the ownership of the property, and in which countries no constitutional or other restriction exists against the legislative grant of such powers to non-judicial officers. It is understood that the advocates of the law will ask for a rehearing of the case, and that if they can get no relief in this way, they will endeavor to have an amended act passed which shall obviate the constitutional objections raised by the court.

Disquieting rumors as to the condition of our relations with Cuba have been current for a few days past. It was reported that the American minister at Madrid had compelled the withdrawal of certain notes sent by the Spanish government to other European powers to sound them in relation to the position of the United States; that the consul-general of Havana had demanded the suspension of certain discriminations directed against American shipping, and that a fleet was being fitted out with a view to possible hostilities with Spain. These statements have since been denied, as have others of a like disquieting nature which have been set afloat within the past few days.

THE SPECULATIVE OUTLOOK.

While the stock market is still more or less under the influence of the favorable conditions that presented themselves in connection with money and general business as soon as the election was over, there has been some qualification of the bullish anticipations that were so prevalent in speculative circles last week. The public has once more interested itself in the Wall street market. This is shown not only by the large volume of buying orders for outsiders, many of whom have been out of the stock market for months, if not for years, but by the inquiry for investments and the preparations which dealers in that class of securities are making to supply such demands. The large oversubscription for the New York city bonds offered this week, and referred to in another portion of this issue, is a case in point. In spite of this, and of the presence of a demand for all classes of securities, which has made reactions in the speculative share market rather inconsequential, it is evident that the public buying demand for securities has not attained its full volume. This is natural, and, it may be added, healthful for the market itself. After such a long-drawn pressure as the country has lately experienced the readjustment must be slow, and the full improvement of business a somewhat protracted process. Any violent advance in stock market values would be in the nature of discounting the future, and the participation of the public to any large extent in such a movement could not fail to bring about the inevitable reaction in Wall street at a much earlier date than would be desirable for the good of all other material interests. The position of the stock market, therefore, seems to be dependent upon the gradual growth of public speculative interest, in due pace not only with the reëstablishment of confidence, but with the actual degree of revived activity in general trade, and with the better results which may be shown by railroad and industrial corporations.

The attitude of the professional stock operators has been a matter of no little interest. It seems that Wall street itself had confidence in the triumph of the sound-money cause. Hence the vigorous purchasing of stocks by such interests in the days preceding the election and in the face of a stringent money market. Yet, the result of the election once known and the public appearing as buyers, the professional speculators, the room traders and the various classes who make up the permanent element in the market were prompt to accept profits. It was selling from such sources to which the reaction on the day succeeding the election was due, and the same element has been prominent in bringing about the hesitating tone and the recessions from the highest level of prices noted in the latter portion of the present week. It may be added that this attitude on the part of the regulars is not thought to be based on the prevalence of any idea that the market is likely to experience marked declines. On the contrary, it is attributed in a considerable degree to a desire to have values recede sufficiently to facilitate the acquisition of fresh lines of long stock, and to establish a basis of values from which there can be a further and possibly a prolonged advance. It must be noted, however, that the traders and the large operators have indulged in more or less short selling, and that in such circles the possibility of a rupture between the United States and Spain in regard to the Cuban revolt has been discussed with great earnestness as a possible element in the situation, and on the various reports in that connection much of the actual bearish manipulation that has affected prices has been based. The fact cannot have failed to strike any observer of the market that, while the professional class in the street were inclined to realize profits on purchases of the regular active stocks, it is due largely to their initiative that a number of the inactive members of the share list, particularly of the low-priced variety, have been lifted into places of increased prominence in the trading, and have in many instances displayed unwonted strength. In some instances it is possible to attribute such movements in hitherto neglected securities to the interests largely identified with the corporations themselves. In others, the public has been apparently ready to follow any lead, however slight, but probably in the majority of such cases the "street" itself has taken hold and is apparently influenced by a belief that the time has come for the readjustment of many of these drooping values to a higher level.

Europe's attitude has not, it is true, been altogether satisfactory. The favorable view taken in London of the result of our election has not been followed by the development of a public appetite for American securities. There has been foreign buying, but it seems to resemble that of the local professionals, comparatively small profits creating a readiness to sell. This, however, may be explained partly by reference to the fact that the British public in the past never came into the American market till a "boom" on this side was well under way, with well defined symptoms of such a movement. At the same time, due regard must be paid to the existence of unusually high money rates in London and to the disquiet caused in the mining market by the action of the Transvaal government, which may demand as indemnity for the Jameson raid a sum that might crush the chief enterprise in which Mr. Rhodes is engaged. Without entering into the causes in detail, the London market has certainly failed to act as if it was ready at this juncture to enter into a decided bull speculation in "Americans."

Turning to the money market, the situation is decidedly encouraging. The return of the hoarded gold to the savings banks, trust companies and other depositories continues on a large scale. The Treasury is making no special effort to attract any of it, and yet the government gold reserves are growing steadily, and already are $7,000,000 in excess of its holdings on the eve of the election. The New York bank statement is confidently expected to display a large gain in this item for the present week. Over $5,000,000 in gold has already gone into the Clearing House vaults at this city, and the movement has an appreciable effect in enabling the banks to meet all demands upon them for aid by the business and speculative publics, the result being a fair and steadily increasing buying demand for commercial paper, a liberal offering of time money, and ample supplies of money on call.

The foreign exchange market has ceased to be regarded as a serious factor either in connection with money or speculation. There has been a decided reaction from the low rates, the ability of mercantile interests to obtain money with which to liquidate balances due abroad, and the tendency of lower money rates here to cause the paying off of loans of foreign money made at high rates during the recent stringency offsetting the sales of the exchange which had been acquired by many timid people in lieu of hoarding gold. The most noteworthy incident of the week in this connection was the sale of a block of some $4,000,000 government bonds for foreign account. The rumor current was that the holding came from the Bank of England itself, though it is impossible to confirm it. The transaction in question was, at any rate, responsible for the sudden advance of exchange on last Monday to the extreme rate of 4.86 for demand bills on London. This, however, was temporary, and the impression that gold exports might ensue disappeared as suddenly as it arose. The exchange market has since been dull on a somewhat lower level, though the firmness of the London money market, which would account for the sale of the governments above referred to, has a further tendency to keep exchange on a relatively high basis. It is needless to say that gold imports have stopped, though some scattering amounts previously secured continue to come in, raising the total amount that has come to these shores since August to about $70,000,000, probably the largest amount of specie ever received within a similar period.

OCTOBER RAILWAY EARNINGS.

October gross railway earnings do not make a very favorable showing, general trade having been at a very low ebb. Total earnings of 121 railroad companies, with over 93,700 miles of track, aggregated $48,149,580, a decrease of 4.3 per cent. from October, 1895, which month showed a gain of 6.8 per cent. from October, 1894. The decrease for October this year was the largest in any month since the summer of 1894.

The increases and decreases shown in each month for the past three years make the following comparison with the month of October.

	1895.	1894.	1893.
November	Inc. 6.3	Dec. 1.4	Dec. 6.6

Totals, U. S.	Inc. 4.0	Dec. 2.9	Dec. 1.4	Dec. 4.6	Inc. 3.1
Mexican	Inc. 10.8	Inc. 9.1	Inc. 22.0	Inc. 3.8	Inc, 6.6
Totals	Inc. 4.1	Dec. 2.4	Dec. .7	Dec. 4.3	Inc. 3.3

Increases shown in October are confined to the trunk lines, coal roads and the Mexican group, in which the gains, at best, are slight. Heaviest decreases are in the central-western group, 11.3 per cent., and the granger roads, 6.1 per cent. Decreases in the eastern, southern, southwestern and Pacific groups range from 3 to 4 per cent. The gain of 1.8 per cent. by the trunk lines is due entirely to increased earnings by the Grand Trunk and its branches. Gains are few in number, and decreases are more than twice as numerous, increases numbering only thirty-two, whereas the decreases are fully eighty-two. Only three of the granger roads show increases, but the smallest proportionate number of gains is in the central-western group, where only four out of thirty-eight show increases. Only one-third of the southern roads show increases, one-half of the southwestern group, and about one-fourth of the Pacific roads. The following table shows the leading increases and decreases during October:

	Increases.
Grand Trunk system	$152,726
Buffalo, Rochester & Pittsburgh	106,306
International & Great Northern	47,227
Missouri, Kansas & Texas	71,115
Kansas City, Pitts. & Gulf	36,232
Oregon Railway & Navigation	149,469
Mexican National	40,539
Mexican Railway	47,045
Total	$644,659

	Decreases.		*Decreases.*
*Bur., Ced. R. & N.	$61,351	Toledo & Ohio Central	$52,717
Chicago, Mil. & St. P.	371,752	Wabash	221,622
Chicago, R. I. & Pac.	68,839	New York Central	37,225
Great Northern	37,385	Cin., N. O. & Tex. Pac.	47,112
Iowa Central	31,795	Louisville & Nash.	38,000
Wisconsin Central	32,861	Norfolk & Western.	39,781
Balt., Ohio & S. W	54,608	Southern	109,442
Chicago & E. Illinois.	42,747	Alabama Gt. Southern	34,156

Grand Rapids & Ind.	44,019	Denver & Rio Grande	61,400
Illinois Central	140,675	Northern Pacific	115,948
Lake Erie & Western	39,509	Mexican Central	33,817
Pittsburgh & Western.	51,918	Total	$2,541,354

* Three weeks.

Only eight companies show increases exceeding $30,000 each, and the total of these eight roads is $644,659. On the other hand, twenty-nine show decreases exceeding $30,000 each, the total of which is $2,541,354.

For ten months total earnings of 116 companies operating 92,408 miles aggregated $389,295,100, a gain over a year ago of 3.3 per cent., which follows a gain in 1895 over 1894 of 4.7 per cent. Only two groups of roads show decreases, the central-western and the one eastern. The largest gain is that of the granger roads, 8.2 per cent. Other increases are less notable, varying from 2 to 5 per cent. in the cases of the trunk lines, the coal roads and the southern lines. The southwestern roads show only a fractional increase, while the gain in the Pacific group is in excess of 5 per cent.

ARBITRATION TO END THE VENEZUELAN CONTROVERSY.

Judging from present indications the vexatious Venezuelan controversy is now upon the brink of settlement. The first real intimation of the extent to which developments in the negotiations for arbitration had proceeded was given in the speech of Lord Salisbury at Guildhall. In this address the British premier expressed the belief that the controversy was at an end. It was often surprising, he said, by what very obvious arrangements questions of great difficulty were solved. In the discussions had with the United States on behalf of Venezuela, the question, he said, had not been whether there should be arbitration, but whether the arbitration should have unrestricted application. Great Britain had always claimed, respecting those who, apart from historic right, had the right which attaches to settled establishment, that the settled districts should be excluded from arbitration. The difficulty for many months had been to find how to define the settled districts, and the solution had come from the United States, in the suggestion that the colonial empire should be treated just as individuals were; that the same lapse of time which protects individuals in civic life from having their title questioned should also protect the English colony from having its title questioned; and where that lapse of time could not be claimed, though there should be an examination of the title, yet all that equity demanded in consideration of such title should be granted. It was, he continued, a very simple solution, and he believed it was not using unduly sanguine words to say that it had brought the controversy to an end.

This declaration of Lord Salisbury produced an immediate and gratifying effect on both sides of the Atlantic. The details of the agreement on which Lord Salisbury's declaration was based have not been given to the public, but it is known that on Monday an agreement defining the basis upon which a final settlement should be arranged for was reached between Mr. Olney and Sir Julian Pauncefote, and a statement of the result was at once cabled to Lord Salisbury in time to enable him to make a reference to it in his Guildhall speech, which forms an annual occasion for touching on the principal international events of importance in which the United Kingdom is concerned. It is understood that a final court of arbitration has been arranged for, which is to consist of five members. Of these, two are to be chosen by the Chief Justice of the United States and two by the Lord Chief Justice of England, while the fifth arbitrator is to be appointed by King Oscar II. of Sweden and Norway, in the event of the four arbitrators whose appointment has been provided for failing to agree upon the deciding member of the tribunal.

Beyond the constitution of the tribunal the most important feature of the convention under which the arbitration is to proceed is the provision that fifty years' actual possession is to constitute a conclusive title as regards the settled districts. With the exceptions involved by the adoption of this period of prescription, the entire region in controversy between Venezuela and British Guiana is submitted to the jurisdiction of the tribunal. It was at first proposed by Lord Salisbury that the arbitration tribunal should include in British Guiana any territory held in bona fide occupation by a British subject on January 1, 1897. Mr. Olney submitted as a counter proposition that the British government should consent to unrestricted arbitration of all the territory in controversy, with the period for the acquisition of title by prescription fixed by agreement of the parties in advance at sixty years. Lord Salisbury suggested a reduction of this period to twenty or twenty-one years, but this did not meet Secretary Olney's view, and after some further discussion the period of fifty years' prescription was agreed upon.

The announcement of Lord Salisbury was followed by the publication of some installments of the diplomatic correspondence leading up to the settlement, and of an official statement by the Venezuelan Boundary Commission announcing the suspension of its efforts to arrive at any decision in the matter of the boundary. In this paper the commission recites that the statements of Lord Salisbury, as reported in the dispatches, make it probable that the boundary dispute now pending between Great Britain and Venezuela will be settled by arbitration at an early day, and that under these circumstances, while continuing its deliberations in the preparation and orderly arrangement of many valuable maps, reports and documents which have been procured and used in the course of its labors, it does not propose to formulate any decision, for the present, of the matters subject to its examination, but will continue its sessions from time to time, with the hope and expectation that a friendly and just settlement of all pending differences between the nations interested will make any final decision on its part unnecessary.

In the face of this gratifying outcome of the protracted and at times vexatious controversy over the Venezuelan boundary question, any disposition to regard the result from any other standpoint than that of a conclusion honorable to both the great parties to the controversy seems out of place. It may be of interest, however, to quote for the benefit of American readers the words in which the leading organ of British public opinion refers to the fact that Venezuela is not to be represented on the arbitration tribunal. The *Times* says: "This is a most far-reaching concession and a signal diplomatic success for the United States, and is interesting to the Americans much more keenly than any mere rearrangement of Venezuelan territory. It secures to England the advantage of dealing with a responsible and friendly government, and admits the principle that the United States may not only intervene in disputes with South American republics, but may entirely supersede the original disputant and assume exclusive control of the negotiations. Great Britain cannot bind other nations by this concession, but she sets up a precedent which may in future be quoted with great effect against herself, and she has greatly strengthened the hands of the United States government should the latter desire to intervene in any future dispute between a South American republic and any European power. It need scarcely be said that the right of interference involves responsibility. If the United States espouse the quarrels of petty republics, they are bound to compel the republics to fulfill their engagements. Such a general protectorate, if executed in the equitable manner which the Washington Cabinet may be expected to adopt, may go far to enforce the principles of national honor and honesty in quarters where now they are often very imperfectly observed."

NEW YORK CITY BONDS SOLD.

Since the election was decided a number of the large cities of the country have promptly put on the market the bond issues which they had been unable to place on satisfactory terms during the period of financial uncertainty which commenced with the assembling of the Chicago convention. In some cases, indeed, municipal authorities recognized the character of the situation and refrained from offering the securities which it was desired to place, waiting for the change in connection with investments which was expected as soon as the election was over. It is, indeed, known that in a number of instances municipalities have been more or less embarrassed from this cause, being unable to continue or commence work upon necessary improvements, although there are cases where temporary loans were secured from local institutions. The record of municipal borrowings in the month of October, however, indicates the state of the bond market. It appears that the total amount of obligations of municipalities throughout the United States placed during the month just ended (which includes some refunding operations) was $4,688,000, against nearly $7,000,000 in October, 1895, and $8,600,000 in the same month in 1894.

The past ten days has, however, witnessed a complete change. The investment demand revived with the utmost promptness, though savings banks, insurance companies and other large buyers of this class of securities are not as yet in the field as buyers—at least to a normal extent. Bond dealers are, however, ready and eager to take the better class of issues, being once more certain of their ability to secure loans upon such values, as well as of the proximity of a large and increasing demand from both corporations and private investors.

Brooklyn, Philadelphia and Cleveland are among the larger towns which have in the past week brought out long-delayed bond issues and found a market for them at normal

premiums. The chief interest in this connection, however, attaches to the successful result of the tender by the city of New York of $16,040,590 of 3½ per cent. gold bonds, issued for various purposes and having different periods to run. It will be remembered that the city, relying on the extremely high credit it had enjoyed, came forward in July last with a portion of these bonds and met with an almost humiliating failure, both as to the character and size of the bids, the bonds being consequently withdrawn until the present time.

New York can again claim that its credit is fully appreciated and that it stands in the very front rank of borrowing municipalities in the world. The bids for the bonds opened on Monday last exceeded all records in this country for similar securities. They aggregated no less than $180,000,000, although some $14,000,000 of the amount were classed as speculative bids of an unsubstantial nature. This incident is believed to be the outcome of the success attained by a few bidders of the same class in the allotment of the last United States government loan, and the comptroller of New York has very properly suggested the enactment of a regulation that hereafter bids for the city's bonds shall be accompanied by a certified check for a portion of the amount bid for, which would tend to diminish the chances of bids of an unsubstantial nature.

The prices offered by the bidders ranged from par to 115, some of the higher prices being offered by parties who, in the opinion of the Sinking Fund Commissioners, were presumably unable to take up the bonds for which they made application. Under the existing laws these bidders must be allowed a chance to make good their tenders for the amount they applied for. The bulk of the bids, however, came from dealers or corporations and at prices ranging from par up to 105 or over. There were three bids for the whole issue coming from houses of the highest standing, it being understood that in each case the bidders represented a syndicate or combination of interests. The award was made to one of these houses, Messrs. Vermilyea & Co., whose bid was 104.71, or a total premium of $755,794. The success of the loan has been naturally regarded with great satisfaction in financial circles and in the money market, and seems to point the way to a new era of activity and strength in municipal bonds of the better class.

COMING REVENUE LEGISLATION.

Almost immediately after the election rumor began to busy itself with the subject of future revenue legislation. The deficit under the existing tariff law certainly seems to point to the desirability of some legislation to raise further revenue. In some quarters the suggestion was made that the incoming President should call an extra session to make a general revision of the tariff. This suggestion appears to have the support of Senator John Sherman, of Ohio, who has been quoted as saying that an extra session of Congress would be called shortly after the 4th of March next. That there will be a demand for this action from many quarters there can be no doubt; in fact, expression has been given to the demand already in interviews and in editorials in the press in certain localities.

On the other hand, this programme has been criticised, not only because of the appearance of haste involved, but also for a variety of other reasons, one of which is that it would open again a period of tariff agitation. Many of those who are opposed to the idea of a general revision at this time speak favorably of the proposition to endeavor to pass the Dingley bill, which came before Congress at the last session, immediately after the opening of the short session in December. The essential provisions of this measure are as follows:

Be it enacted, That from and after the passage of this act and until August 1, 1898, there shall be levied, collected and paid on all imported wools of Classes 1 and 2, as defined in the act hereinafter cited, approved October 1, 1890, and subject to all the conditions and limitations thereof, and on all hair of the camel, goat, alpaca and other like animals, except as hereinafter provided, and on all noils, shoddy, garnetted waste, top waste, slubbing waste, roving waste, ring waste, yarn waste, and all other wastes composed wholly or in part of wool, and on woolen rags, mungo and flocks, a duty equivalent to 60 per centum of the duty imposed on each of such articles by an act entitled, "An act to reduce the revenue and equalize duties on imports and for other purposes," approved October 1, 1890, and subject to all the conditions and limitations of said act; and on all wools and Russian camel's hair of Class 3, as defined in said act, approved October 1, 1890, and subject to all the conditions and limitations thereof, there shall be levied, collected and paid the several duties provided by such act approved October 1, 1890; and paragraph 279 of schedule K, and also paragraph 685 in the free list of an act entitled, "An act to reduce taxation, to provide revenue for the government, and for other purposes," which became a law August 27, 1894, are hereby suspended until August 1, 1898.

Section 2. That from and after the passage of this act and until August 1, 1898, there shall be levied, collected and paid on all imported articles made in whole or in part of wool, worsted, or other materials described in section 1 of this act, except as hereinafter provided, 60 per centum of the specific pound or square yard duty imposed on each of such articles by an act entitled "An act to reduce the revenue and equalize duties on imports, and for other purposes," approved October 1, 1890, and subject to all the conditions and limitations thereof, in addition to the ad valorem duty now imposed on each of such articles by an act entitled "An act to reduce taxation, to provide revenue for the government, and for other purposes," which became a law August 27, 1894, and on carpets, druggets, bockings, mats, rugs, screens, covers, hassocks, bedsides, art squares and other portions of carpets or carpeting made in whole or in part of wool, the specific square yard duty imposed on each of such articles by said act approved October 1, 1890, and subject to all the conditions and limitations thereof, in addition to the ad valorem duty imposed on such articles by said act, which became a law August 27, 1894.

Section 3. That from and after the passage of this act and until August 1, 1898, there shall be levied, collected and paid on all imported lumber and other articles designated in paragraphs 674 to 683, inclusive, of an act entitled "An act to reduce taxation, to provide revenue for the government, and for other purposes," which became a law August 27, 1894, a duty equivalent to 60 per centum of the duty imposed on each of such articles by an act entitled "An act to reduce the revenue and equalize duties on imports and for other purposes," approved October 1, 1890, and subject to all the conditions and limitations of said last-named act; but pulp wood shall be classified as round unmanufactured timber exempt from duty; provided, that in case any foreign country shall impose an export duty upon pine, spruce, elm, or other logs, or upon stave bolts, shingle wood, pulp wood, or heading blocks exported to the United States from such country, then the duty upon the lumber and other articles mentioned in said paragraphs 674 to 683, inclusive, when imported from such country, shall be the same as fixed by the law in force prior to October 1, 1890.

Section 4. That on and after the passage of this act and until August 1, 1988, there shall be levied, collected and paid on all the imported articles mentioned in schedules A, B, C, D, F, G, H, I, J, L, M and N of an act entitled "An act to reduce taxation, to provide revenue for the government, and for other purposes," which became a law August 27, 1894, a duty equivalent to 15 per centum of the duty imposed on each of said articles by existing law in addition to the duty provided by said act of August 27, 1894; provided, that the additional duties imposed by this section shall not in any case increase the rate of duty on any article beyond the rate imposed thereon by the said act of October 1, 1890, but in such case the duty shall be the same as was imposed by said act; and provided further, that where the present rate of duty on any article is higher than was fixed by said last-named act, the rate of duty thereon shall not be further increased by this section, but shall remain as provided by existing law.

The schedules referred to in the last section for which additional duty is provided cover chemicals, earthenware and glassware, metals, manufactures of woods, tobacco, agricultural products, spirits and wines, cotton manufactures, flax, hemp and jute, silks, pulp, papers and books and sundries. It has been suggested that the passage of this measure would provide the revenue immediately needed, and that little or no opposition to it may be expected from the minority in the House, while the President might be counted upon not to veto it, in accordance with a long-standing tradition, but even if opposed to it might be expected to let it become a law without his signature.

MANHATTAN'S YEAR.

Rumor has lately been very busy concerning the Manhattan elevated railway system of New York city. There have been persistent reports that the control of the corporation was to pass into the hands of the Metropolitan Traction Company, the concern which now owns a major portion of the surface car lines of the city. One variation on this theme has been that a new outside combination proposed to obtain possession of both the Manhattan and the Metropolitan. Denials have not stilled the reports in question, and the rapid recovery in the market quotation of Manhattan stock which began even before the presidential election, and which this week carried the price to over par, was based upon this attractive theory. At the same time it is known that the Manhattan management is considering the possibility of meeting in some way the extra competition which the elevated roads have encountered since the change by the Broadway and Third avenue lines to cable power, and the construction of branches and extensions by the former in parts of the city hitherto dependent for transit upon the Manhattan. The expenses of the latter have been cut down as much as possible, so it is said, though the decrease in traffic on the lines would naturally have led to the running of lighter trains and the curtailment of outlay in other directions. The possibility of replacing steam as a motive power with electricity has also been under consideration, and experiments have been made to that end upon portions of the system. The management have expressed the opinion that the change can be made with advantage, and that it will probably be done when it is determined what plan is the best under the conditions which present themselves. So far, however, nothing of a definite character has transpired in this connection, and the reports of a combination with the surface roads, referred to above, have apparently been the only basis on which the decided improvement in Manhattan has been effected, unless, indeed, an additional favorable influence is found in the refunding of a part of the outstanding bonded debt at a lower rate of interest.

The annual report of the Manhattan Railway for the year ending September 30, 1896, was made public this week. The figures are interesting in themselves, and point to the continued effects of the cable roads' competition. The net result of this is that in the year under consideration the surplus earnings were equal to about 4 per cent. on the stock, and that after paying the full 6 per cent. dividends thereon there was a deficit of $596,000, whereas in the year ending September 30, 1895, the surplus was equal to 4.69 per cent. on the stock, and the deficit after the 6 per cent. dividends was $391,000. In 1894 earnings were equal to 6.81 per cent. on the company's share capital, and there was a surplus of $240,179 over the same.

The record of passengers carried is, however, very suggestive. This year the total number was 173,390,424, against 179,234,356 in 1895 and 190,669,854 in 1894. There is an increase shown in the passengers transported on the suburban extension of the system, the number on that portion of its lines being 10,046,820, against 8,838,289 in 1895 and 5,489,469 in 1894. Adding these to the passengers of the Manhattan proper, the total of passengers for this year is 182,437,244, against 188,072,645 last year, a decrease of 5,535,401, while in 1894 the aggregate was 196,159,323, making a decrease in two years of 13,722,079. The figures giving the receipts and expenditures for three years are as follows:

Year ending Sept. 30.	1896.	1895.	1894.
Gross earnings	$9,352,115	$9,745,926	$10,138,143
Operating expenses	5,471,275	6,132,827	6,095,557
Net earnings	$3,880,840	$3,613,099	$4,042,586
Charges	2,677,611	2,204,887	2,002,406
Balance	$1,203,228	$1,408,212	$2,040,179
Dividends (6 per cent.)	1,800,000	1,800,000	1,800,000
Deficit	$596,772	$391,788	*$240,179

* Surplus.

The gross earnings this year decrease $393,810, operating expenses are reduced $661,552, and the net increases $267,741.

BUSINESS OF THE POSTAL DEPARTMENT.

What may be called the peculiarly business features of the work of the Post Office Department are dealt with in the annual report of the First Assistant Postmaster-General. He reports that during the last three fiscal years the aggregate savings in the divisions of salaries and allowances of postmasters were $545,994; in free delivery, $2,314,415, and post office supplies, $218,540; total, $3,278,985. For that period there was an aggregate reduction of 3,030,134 in pieces of mail matter sent from post offices to the dead letter office. The total number of presidential offices July 1 last was 3,651, of which 169 were first class, 746 second class, and 2,736 third class. The gross receipts for all the first, second and third class offices—the fourth class having been already reported by Fourth Assistant Maxwell—were $65,282,365, and the total salaries $6,203,900. Since November 2, 1894, there have been 2,459 positions in the post offices drawn into the classified service. This leaves as the only positions at first class post offices that are now excepted from civil service examinations, assistant postmasters and principal cashier; at second class offices, assistant postmaster, under any legal designation.

Notwithstanding enormous increases in gross receipts, the numerical increase in the force has been considerably less than 50 per cent. of previous years. During the fiscal year twenty-nine stations and 120 sub-stations were established, and one station and seven sub-stations were discontinued, a net increase of 141 stations and sub-stations. Fifty-five post offices of the second, third and fourth classes were discontinued during the year, and fifty-four stations and sub-stations were

established to take their place. Attention is drawn to the fact that the realty values in a number of the larger cities are so rapidly advancing that in order judiciously to expend the money appropriated for rent at first and second class offices, the Post Office Department, the report says, should be at liberty to execute leases for post office premises for a period in excess of five years, where, in the opinion of the Department, it is necessary. The expected completion of sixteen government buildings during the present year will result in an annual saving of $24,081 in rent.

One of the principal features of the report deals with the subject of free delivery. It appears that the experiment of free delivery in forty-five towns and villages cost the Department $8,247, leaving an unexpended balance of $1,753. Investigation showed that in a majority of the offices the gross receipts had decreased since the establishment of the service, the Department being compelled to send money to some offices for the payment of the letter-carriers' salaries. Congress did not appropriate for further permanent or experimental service, and the experiment was necessarily discontinued with the close of the fiscal year. There are sixty-three offices entitled to the establishment of the free delivery service during the fiscal year ended June 30, 1896, but the service could not be established at more than nineteen offices without entailing a greater expense upon the limited appropriations for the current year than the maintenance of the established service would permit. The rural free delivery experiment was in operation at points in thirty states by the 1st of this month, and the result of this test will be submitted in a special report to Congress in December.

Statistics of the operation of the free delivery service since its inception in 1863 are given in the report, as follows:

Year.	Offices.	Carriers.	Gross receipts.	Cost of service.
1863-64	66	685	.....	$317,063
1864-65	45	757	.....	448,664
1865-66	46	863	.....	589,236
1866-67	47	943	.....	699,934
1867-68	48	1,198	.....	995,934
1868-69	48	1,246	.....	1,183,915
1869-70	51	1,362	.....	1,230,079
1870-71	52	1,419	.....	1,351,923
1871-72	52	1,443	.....	1,385,965
1872-73	52	1,498	.....	1,422,495
1873-74	87	2,049	.....	1,802,696
1874-75	87	2,195	.....	1,880,041
1875-76	87	2,269	.....	1,981,186
1876-77	87	2,265	.....	1,893,619
1877-78	87	2,275	$12,117,820	1,824,166
1878-79	88	2,359	13,066,470	1,947,706
1879-80	104	2,628	15,082,166	2,363,693
1880-81	109	2,861	16,887,086	2,499,911
1881-82	112	3,115	19,414,772	2,623,262
1882-83	154	3,680	22,317,499	3,173,336
1883-84	159	3,890	21,596,020	3,504,206
1884-85	178	4,358	21,940,169	3,985,952
1885-86	181	4,841	22,629,826	4,312,306
1886-87	189	5,310	25,014,385	4,618,694
1887-88	358	6,346	29,459,943	5,422,356
1888-89	461	8,257	32,206,493	6,957,941
1889-90	454	9,066	36,648,000	7,976,202
1890-91	519	10,130	40,405,386	9,072,160
1891-92	568	10,737	44,031,728	9,965,892
1892-93	610	11,625	48,444,363	10,683,575
1893-94	610	11,736	45,801,210	11,229,436
1894-95	604	12,714	49,728,621	12,135,544
1895-96	627	12,834	52,567,624	12,713,861

Regarding the money order system, it appears that the aggregate number of domestic and international money orders issued during the year was 24,947,849, amounting to $185,953,264, and their payments and repayments were 24,140,848, amounting to $177,087,567. There was an increase of over 8 per cent. in the whole number of money orders issued, showing growth of the system, and the total increase in revenue from both the domestic and international business was $74,147. The total amount of bills of exchange resulting from exchange of international money orders sent to foreign countries during the year was $8,291,799, the balances received from abroad for the same purpose being $201,870. Touching the allowances authorized to be made to postmasters for the amount of money order funds lost in transit by burglary, fire, or other unavoidable casualty, it appears that during the past year there were examined and adjudicated, under the supervision of the Assistant Attorney-General for the Post Office Department, 354 cases of such alleged losses, amounting to $25,475.17, being sixty less in number and $894.53 less in amount than in the preceding year. In 269 of these cases, amounting to $16,651.69, the claim of the postmaster was allowed; in sixty cases, amounting to $6,947.06, the claim was disallowed, and the remaining twenty-five cases, amounting to $1,876.42, were withdrawn. In the dead letter office 6,253,363 pieces of original dead mail matter were received, about $33,860 being inclosed, and 87 per cent. of the money restored. Letters also came containing drafts, checks, etc., of the apparent value of $956,095, about 92 per cent. of this being returned to owners.

Among the recommendations contained in the report prominence is given to the private letter-box abuse in large cities. It is in some cases impossible to locate persons engaged in conducting fraudulent and unlawful correspondence through the mails, who, for a comparatively small sum, can rent a box in some cigar or stationery store, through which to receive letters addressed to them. Several bills have been introduced within the past few years designed to put an end to the practice of boycotting postmasters at offices of the fourth class, thereby depriving them of the compensation properly belonging to them. This matter, the Assistant Postmaster-General says, should be called up, and some action taken that would result in postmasters receiving at least the compensation which properly belongs to their respective offices. Other recommendations provide for the placing of dealers in obscene matter upon the fraud list, a penalty for the unlawful use of the frank of a member of Congress, authority for the suspension of post office employees, for substitute clerks with pay in the place of regular clerks necessarily absent, for leave with full pay to clerks or carriers disabled while on duty, and for substitutes to assist regular carriers on holidays and other emergencies, and requiring bonds covering negligence or dishonesty of money order clerks.

BIMETALLISM, INTERNATIONAL AND INDEPENDENT.

If anybody is entitled to be regarded as an exponent of theoretic bimetallism, it is General Francis A. Walker, who is easily the first of American bimetallists, and takes rank second to none abroad in this particular field of propaganda. His position in relation to the demand for independent free coinage by the United States, which has been lately so signally rebuked by the people, is well known, but a restatement of it may not be without interest in view of the fact that in some quarters there is manifested a disposition to endeavor to galvanize the silver issue into a new life. A statement of his views was made by him on Saturday last in an address delivered before the Massachusetts Schoolmasters' Association.

General Walker said that the question was often asked why, if France could do so much by herself alone in maintaining the parity of the two metals, could not the United States look to produce a similar effect? To this he answered, in the first place, that the time has passed when even France herself could maintain the function she performed from 1809 to 1873, so greatly have the stocks of the precious metals been increased, so vast is now the mass of securities immediately marketable, so much more rapid is the communication of news and the transportation of specie, so potent has been the influence of Germany through its passage from the silver to the gold states, so much have trade and production developed with the improvement of arts and the increase of population. In the next place, he said, the people of the United States normally use vastly less metal money than the French now do, or than the French did in the early time, and by consequence this country is not and has never been in a position to exert an equal effect on the market for the money metals.

Finally, he said, if bimetallism is indeed to be reëstablished for the great objects which have been pointed out, it must be sought through international agreement. No single state is powerful enough to do this work alone, and every state owes it to its own citizens not to venture upon rash experiment, the failure of which might wreck its credit and destroy its commerce and industry. Nothing is to be gained by a venture which could only result in throwing an additional onus and odium upon this subject. During the past summer a few ardent European bimetallists, under the excitement of seeing the United States apparently about to undertake the free coinage of silver alone, have been led away into giving some doubtful encouragement to the proposal. But the general sense of the bimetallists of Europe is distinctly opposed to any such measure on our part. "If," he continued, "the advantages of bimetallism shall not prove sufficient to overcome the jealousies and animosities of European nations, we can at least say that the people of the United States, by reason of their high standard of wages, their large accumulations of wealth and their vast undeveloped resources, can endure the evils of gold monometallism as long as the rest of them."

It can scarcely be said that the view here taken as to the outlook for international bimetallism by one of its main promoters is any too sanguine. On the other hand, the chosen leader of the silver forces in the late campaign speaks, in an address issued by him, of the "delusive hope of international bimetallism," and declares that "before the year 1900 international bimetallism will cease to deceive." The advocates of the single gold standard can look upon the situation with complacency, but they should relax none of the strenuousness which won the recent victory at the polls, and which may conceivably be needed to give the free-coinage movement a final quietus in the future.

LIGHT RAILROADS IN ENGLAND.

Under the above title the *Railroad Gazette*, in its last number, had an interesting discussion of an act passed by the British Parliament at its last session which authorizes the construction of light railroad lines in the United Kingdom. Notwithstanding the density of railroad mileage in that country, there are many localities which would be benefited by the possession of railroad connection, though on account of the very expensive nature of ordinary railroad construction as practiced there it cannot be obtained. The same conditions exist in this country in sections where the population is dense. The neighborhood of the large cities, the mining districts of Pennsylvania and the New England manufacturing sections are typical instances, and in such the electric trolley railroad has worked a revolution of transportation facilities so far as passenger travel is concerned. Whether American examples have been taken into account in framing the new British legislation upon this subject is not clear. It would, however, seem that the necessities which called for it are the same in the old country as in the new, though the manner in which it has been approached is characteristically British.

The bill, it appears, provides for roads that can be built in a light manner without the expense that the ordinary solidity of railroad construction in England involves and which will serve both passenger and freight traffic. Moreover, such projects are to be free from the prohibitory expense of application to Parliament which the regular railways have to encounter whenever they undertake to build even a small branch line or "feeder." In addition, the principle of public aid in the construction of the new class of lines is applied, grants of public money may be made by the localities involved in case it can be shown that the road would benefit agriculture or any definite industry. In addition, the general government exempts the roads constructed under the act from the duty on passengers levied on the ordinary railroads.

A very radical step is also taken by the new law on the subject in the form of an authorization to British counties, districts or towns to either subscribe for, lend money to, or even construct and operate light railways themselves. "Indeed," says the *Railroad Gazette*, "in one respect local authorities occupy a specially privileged position, for, whereas in the case of application by a company the refusal of the Light Railway Commissioners to approve the scheme is final, a local authority is empowered to appeal from the commissioners to the Board of Trade. On the other hand, a local authority which desires to construct and work the line itself must find the whole of the funds, for Treasury advances, whether on loan or as a gift, may only be made to companies."

In another respect, that of obtaining right of way, the law is calculated to facilitate such enterprises. "The provisions dealing with the acquisition of the land necessary for the undertaking reflect the spirit of the age in emphasizing the landowner's duties rather than his rights. Before state aid is given to a line, the Treasury must be satisfied that 'landowners have, by the free grant of land or otherwise, given all reasonable assistance in their power.'" A very commendable provision is that light railways shall not destroy or injure any building or object of historical interest, or injuriously affect natural scenery, and due safeguards are thrown over the construction of junctions between the light railroad lines and the regular roads, so that there shall be no interference with the tracks used for passenger traffic. The methods and standards of building the new roads are left to the Commissioners of Light Railways and the Board of Trade, the legislation embodied in the Railway Regulation acts having no application to the new light lines. "The newspapers of Great Britain," adds the journal from which the quotations are taken, "are full of light railroad discussions and light railroad projects, and we shall doubtless soon see definite steps taken in many parts of the kingdom. In Scotland, indeed, the question has already been raised in an interesting form. The Great

North of Scotland Company is a small but very enterprising company, with some four hundred miles of line in the fertile but mountainous county of Aberdeen, on the northeast coast of Scotland. Its principal officers have lately been round Europe studying continental light railroad development, and as one result the company has expressed its readiness to undertake the construction of a number of light railroads centering in Aberdeen."

THE POSITION OF THE SILVER MARKET.

All the evidence thus far confirms the belief that in the silver market, at least, the result of our election had been pretty well discounted. Mr. Moreton Frewen, the noted English bimetallist, who was here for some time before the election, had, indeed, predicted a free-silver victory. His claims, however, did not appear to have stimulated any speculative purchases in London, and the decline in the commercial quotations for bars in that market which followed the news of the success of sound money in the United States was of a sentimental kind, and was unaccompanied by any indications of a speculative liquidation of silver values such as would have followed if there had been any large bull account in them opened on the chances of a free-silver triumph. It is true that in this market on the Wednesday succeeding the election silver bullion certificates had a sharp but momentary drop. The price, which was 65⅝ on the Monday before the election, opened two points down and touched 62½, though this was promptly followed by a rally to 64½, and since that time silver certificates have been rather steady and neglected. The drop itself was apparently the result of closing out a few speculative holdings, the remnant of the comparatively large amount which Wall street operators had taken during the summer, when the prospects of the free-silver candidate looked much more promising than they afterwards became. In fact, the bulk of this speculative bull account in silver was liquidated some weeks ago, when the decline in the London market, due to the Indian famine, the depression of Eastern exchange and the decreasing demands for the countries east of the Cape of Good Hope asserted themselves and made a weaker silver market a tangible probability.

Reference was made in these columns prior to election to the Indian situation as the real controlling factor in the position of the silver market. The outcome of the election here makes this a matter of certainty. The continued weakness of prices for the metal in London, with its corresponding effect upon the quotations here, is strictly the result of the conditions prevalent in India, supplemented by the state of exchange with the other silver-using countries of the East. The London *Statist*, in its issue of October 31, goes so far, indeed, as to say that if the silverites in the United States were defeated the outlook for silver would be extremely gloomy. The decline in the commercial price in the past fortnight indicates, however, as already pointed out, that there has been no extraordinary depression from this cause. On the other hand, the issues of the journal in question and the other London financial papers at hand this week, though written prior to our election, contain references to another factor that has the apparent effect of steadying silver for the time being. The circumstance to which they direct attention is the higher value of money in India, and the strengthening of India exchange, with its natural tendency to steady the price of silver. On this point the *Statist* observes, speaking of the considerable demand for India Council bills and the high rates obtained at the allotment on the 28th ultimo: "So long as money in India continues scarce, the value of the rupee is likely to remain firm, and should money become dearer, which is considered probable, exchange is likely to go still higher. The government will be compelled to make large disbursements to those employed on relief works, and money may gradually filter back into the market, although, on the other hand, the movement of the rice crop early next year will again denude the market and may keep the value of money in India at a high level." The fluctuations of the Indian price for silver, though well below the London quotations for bars, are in sympathy with exchange, and this, it appears, constitutes for the time being an obstacle to a more decided drop in silver.

DOMESTIC TINPLATE PRODUCTION.

The annual report of Special Agent Ayer to the Treasury Department for the fiscal year ending June 30, 1896, is a favorable one, in that it shows an increase in the output over the previous year. Less than 2 per cent. of the largely increased product is made from imported sheets, and fifty out of fifty-three firms use American rolled sheets exclusively.

The report states that the production in the United States of commercial tin and terne plates was 307,228,621 pounds, against 193,801,073 pounds in the previous fiscal year, an increased production of more than 58 per cent. Of the production for the year, 303,002,098 pounds, or more than 98½ per cent., were made from sheets rolled in the United States, against about 83 per cent. made from such sheets during the fiscal year ended June 30, 1895. The production for the year, distributed according to weight and kind of plates, was as follows:

	Lighter than 63 lbs. per 100 sq. ft.	*63 lbs. per 100 sq. ft. & heavier.*	*Total.*
Tinplates, lbs	182,045,569	30,543,612	212,589,181
Terneplates, lbs	82,874,323	11,765,117	94,639,440
Totals	264,919,892	42,308,729	307,228,621

These figures show that more than 86 per cent. of the production belonged to the class of plates weighing lighter than 63 pounds per 100 square feet, the proportion being about the same as that for the previous fiscal year. Of the entire production 69 per cent. consisted of tinplates, against 62 per cent. for the preceding year. The report embraces the production of fifty-three firms.

	Pounds.
Total imports during fiscal year ended June 30, 1896	385,070,372
Total exports, same period	137,659,779
Net imports	247,410,593
Total domestic production	307,228,621
Approximate consumption in the United States.	554,639,214
Average annual capacity of mills completed June 30, 1896 (180), say	560,000,000
Same, of mills completed and in process of construction June 30, 1896 (188), say	585,000,000

Of the fifty-three firms, fifty used wholly American plates, with an output of 291,725,467 pounds, and three used both American and foreign plates, with an aggregate output of 15,503,154 pounds, of which 11,276,631 pounds, or about 73 per cent., were made from American black plates. No firm used wholly foreign plates. Of the fifty-five firms reported as producing commercial tin and terne plates during the fiscal year ended June 30, 1895, thirty-seven used wholly American plates, with an output of 131,429,609 pounds; seventeen used both American and foreign plates, with an aggregate output of 62,311,308 pounds, of which 29,047,325 pounds, or about 46½ per cent., were made from American black plates; one firm used foreign plates only, with an output of 60,156 pounds.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

Recent advices from London as to the Indian wheat crop are that the situation is more serious than previously, and that the demand may overtax the supply. Inquiries for wheat have been received at London from India, and Australia continues its occasional purchases in California. These facts point to the present as an extraordinary season, one certainly not likely to witness so low a range of prices as have marked recent years. The recent increase in wheat shipments from exporting countries to Europe was the outcome of the sharp advance in prices. In the opinion of those in a position to judge, they were to replenish depleted stocks. The heavy exports of wheat from the United States to the United Kingdom are believed by Beerbohm to mean correspondingly less available at the end of the latter half of the current cereal year. Perhaps the only bearish evidence to-day is to be found in the free shipments of wheat from farmers' hands in the United States, attracted by higher prices, which, in some instances, have supported the claim that the domestic wheat crop is underestimated by those who place it at 400,000,000 bushels. BRADSTREET'S has not given out any report or opinion of the wheat crop in this country this year justifying the statement credited to it—that the crop will amount to only 400,000,000 bushels; but it has commented at length on the claim of northwestern milling interests that the crop will not amount to more than that total, pointing out that if that total is to be accepted we have not more than 22,000,000 bushels of wheat to export during the remaining eight months of the cereal year, unless we intrench upon wheat needed at home for seed, for food and for reserves. That such is the case, however, remains to be seen. Shipments of wheat to Europe from all exporting countries during twelve weeks ended October 24 are declared to have exceeded current requirements of various importing countries by about 11,600,000 bushels; but stocks in the ports of the United Kingdom at the close of October were less than at the beginning of August, pointing to the strength of the statistical position of wheat in that country. An examination of reports of stocks of wheat afloat for and in Europe, as reported to BRADSTREET'S, during the past eleven weeks, shows them to have increased, net, more than 20,000,000 bushels compared with like stocks and shipments in 1895, while in 1895 such supplies decreased, net, more than 2,000,000 bushels as contrasted with the like portion of the year 1894. On the other hand, the weekly increases of domestic available stocks of wheat during the past eleven weeks, compared with like weeks in 1895, amount to more than 21,000,000 bushels, net, but in like weeks in 1895 the corresponding gain, compared with the like portion in 1894, was nearly 37,000,000 bushels. The movement of wheat prices in this country during the week would seem to indicate that traders have begun to more fully appreciate the meaning of the statistical position of the cereal.

CURRENT BUSINESS NEWS.

Industrial.

The twentieth annual General Assembly of the Knights of Labor began its sessions this week at Rochester, New York.

A new central labor body, to be known as the Chicago Federation of Labor, was organized in that city on Tuesday.

The Chattanooga *Tradesman* is "warranted in the prediction that the south is now entering upon an era of industrial prosperity which will rapidly bring it to the front rank of the manufacturing sections of this country."

The Chattanooga *Tradesman* says: "During the past week the Tennessee Coal, Iron & Railway Company have sold 4,000 tons of pig iron at an advance of 25 per cent. per ton over previous prices, and from the inquiries received, it is evident that orders aggregating many thousands of tons will be placed in the next few days, and a further advance in prices is confidently expected."

The labor troubles at Leadville, Col., are unsettled this week and the militia have remained under arms.

G. B. Swinehart, editor of the Juneau, Alaska, *Mining Record*, has compiled data showing the gold output of the territory for the current year to be $4,670,000, of which $2,315,000 was taken from placer ground, and $2,355,000 from quartz claims. The output for 1895 was $3,000,000, and the estimated output for 1897 $6,000,000. A total of 549 stamps are in operation, 85 having been added during the present year.

The Plainfield *Daily Press* says that the Standard Oil Company will soon commence the work of doubling the refining capacity of its plant at Constable Hook, N. J., and will spend $1,700,000 in the work.

Commercial.

The Vienna *Fremdenblatt* says: "Count Adolf Gyulai, the well-known Austrian sportsman, who has just completed a journey through the United States, has published a pamphlet giving the result of his investigations into American horse breeding. Count Gyulai states that the United States in the immediate future will export not only trotting horses, but also large numbers of driving and draught horses, to Europe. The price of horses in America is steadily falling, so that breeders have been forced to take to exporting in order to get rid of their stock. In three years the number exported has risen from 10,117 to 27,555."

A Chicago dispatch says: "The railroad companies are refusing to receive potatoes even with the freight prepaid because of their extreme abundance."

The quantity and quality of this year's peanut crop of Virginia and North Carolina are below the average.

The New York state shell fish commissioner reports that during the past year 3,500,000 bushels of oysters were taken from the waters of that state, which "is fully 500,000 bushels more than has been taken in any previous year of which the state has record, and the quality of the oysters is unsurpassed."

The sixteenth annual session of the Farmers' National Congress began this week in Indianapolis.

Delegates from the grain growing states in the western and middle states met in Chicago on Monday and organized the Grain Dealers' National Association, "to obtain relief for the country shippers in the matter of shortage imposed by the railroads and kindred interests."

The annual session of the National Grange was begun in Washington this week. Thirty states were represented.

A Chicago morning paper says: "Window glass has advanced 10 per cent. within three days, and an additional advance of 10 to 15 per cent. is the specific object of a meeting of the local jobbers to be held in this city this afternoon."

Samuel Spencer, president of the Southern Railway Company, is reported as saying "that the first fortnightly trip of the new southern export line from Norfolk to European ports would be made between November 25 and December 1. The Johnston Line, from Liverpool, has been engaged for the work. Three lines will be established—one from Norfolk, one from Savannah, and a third from Brunswick. The first trip will be made from Savannah November 15. This too, will be a fortnightly line."

Financial.

The sales on the New York Stock Exchange for October were as follows:

	1896.	1895.	*Decrease.*
Stocks, shares	4,899,641	5,066,025	166,384
Governments	$988,500	$508,300	*$480,200

* Increase.

The following securities were sold at auction this week at New York:

5 Shares Fifth Avenue Bank, $100 each	$3,000 per share.
1 Membership New York Produce Exchange	$200
$127,000 First Consolidated Mortgage Bonds of the Lake Ontario & Riverside Railway Company, September 1, 1896, coupon attached; also lease of the Shenandoah Mills property, in the city of Oswego, New York, dated June 1, 1896, for ten years	$1,000
515 Shares National Air Brake Company	$10 per lot.
$1,000 Atchison & Pike's Peak Railroad (Central Branch Union Pacific) 1st 6 per cent.	41
1 Certificate membership New York Produce Exchange	$180
50 Shares Diamond Match Company	141
100 Shares New York Buiscuit Company	62¼
25 Shares American Surety Company	194
100 Shares New York Biscuit Company	62
50 Shares Diamond Match Company	141
36 Shares Continental National Bank	136½
10 Shares Real Estate Exchange & Auction Room, Limited	75½
67 Shares Newman National Bank, Newman, Ga.	94
185 Shares First National Bank, Newman, Ga.	106
105 Shares West View Cem. Company, Atlanta, Ga.	25
50 Shares West View Floral Company, Atlanta, Ga.	11
829 Shares Eagle & Phenix Manufacturing Company, Columbus, Ga	$825 lot
$20,000 State of Virginia 6 per cent. deferred certificates.	7¼

The London *Times* concludes "the present indications are that the United States will take a million or two more of gold before the year is out, but early in 1897 a reflux is probable."

The *Commercial Bulletin* says: "The fire loss of the United States and Canada for the month of October, as compiled from our daily records, shows a total of $8,993,000. This is a remarkable improvement over October's showing in 1895, as will be seen from the following table, which exhibits the losses by months:

	1894.	1895.	1896.
January	$10,568,400	$11,895,600	$11,040,000
February	11,297,600	12,360,200	9,730,100
March	9,147,100	14,239,300	14,839,600
April	11,540,000	11,018,150	12,010,600
May	10,777,800	7,761,350	10,618,000
June	8,282,300	9,223,000	5,721,250
July	16,307,000	9,085,000	9,033,250
August	10,432,800	9,929,000	8,895,250
September	10,149,900	10,766,300	8,200,650
October	8,186,700	13,411,500	8,993,000
Totals	$105,789,600	$109,689,400	$99,081,700

The Chicago, Burlington & Quincy Railroad Company has declared a quarterly dividend of 1 per cent., payable December 15.

The Adams Express Company has declared a quarterly dividend of 2 per cent., payable December 1.

The North Pennsylvania Railroad Company has declared a quarterly dividend of 2 per cent., payable November 25.

The London *Economist*, "while sharing in the general satisfaction at the triumph of McKinley," cannot but "feel that too optimistic views are taken of the results. The free silver agitation which paralyzed business has suffered defeat, but a mere popular pronouncement will not suffice to place the currency upon a sound basis. The coming McKinley administration, if it takes the right course, will gradually redeem its notes, and leave the supply and regulation of the paper currency to the banks, whose function it more properly is."

The Chicago, Burlington & Quincy Railroad Company has declared a quarterly dividend of 1 per cent., payable December 15.

The Adams Express Company has declared a quarterly dividend of 2 per cent., payable December 1.

The North Pennsylvania Railroad Company has declared a quarterly dividend of 2 per cent., payable November 25.

The American Express Company has declared a semi-annual dividend of 3 per cent., payable January 2.

The Hecker-Jones-Jewell Milling Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable December 1.

Dealings were made in the unlisted department of the Stock Exchange on Friday, for the first time, in the securites of the reorganized Northern Pacific Railroad Company, "deliverable when issued." The prior lien 4s sold at 85, the general 3s at 52½@53¼, and the preferred stock at 34½@34⅞.

The Third Avenue Railroad Company has declared a quarterly dividend of 2¼ per cent, payable November 28.

The Diamond Match Company has declared a quarterly dividend of 2½ per cent., payable December 12.

Railroads.

The Manhattan Elevated reports for the past three fiscal years:

	1894.	1895.	1896.
Gross earnings	$10,138,143	$9,745,926	$9,352,115

Other income	66,953	67,052	26,633
Total income	$1,269,697	$1,121,594	$963,472
Fixed charges	367,463	330,590	328,467
Balance	$902,234	$791,004	$635,005
Dividend	890,000	559,000	560,000
Surplus	$12,234	$232,004	$75,005

Miscellaneous.

The annual session of the National Commission of Mutual Insurance Underwriters was begun in Kansas City, Mo., this week.

The Association of American Agricultural Colleges and Experimental Stations began its tenth annual convention in Washington, D. C., this week.

As to the tariff, the London *Economist* warns the English public not to be sanguine as to immediately heavy exports to this country. It feels sure that English manufacturers will be likely to take advantage of the present law, and they will be wise if they do so, as under the new law they are not likely to have such opportunities to capture our home trade as they now have.

The London *Statist's* editor wired that paper from the United States October 29: "Despite the reported 'odds' of four to one on the return of Mr. McKinley the result of the United States elections is by no means a foregone conclusion."

The report of the chief financial officer of the navy is that it has taken nearly $8,000,000 "to maintain sixty warships in commission—that is, to keep them in fighting trim, officered adequately and manned by a sufficient crew. Most of the vessels have been kept on the active list for the entire twelve months, and the relative cost for the efficiency is about equally divided."

Foreign.

If it is found possible to restore the old channel of the Amu-Daria and divert its waters again into the Caspian sea, "Russia would have the enormous advantage of a continuous waterway from St. Petersburg and the Baltic right away to Afghanistan."

There has been talk in the Transcaspian "of a project for another railway line to the gates of Herat through Persia."

The western section of the Siberian Railway from Cheliabinsk to the Obi, 889 miles in length, with a branch of 158 miles from Cheliabinsk to Ekaterinburg, was opened within a month. "A new section of the Transcaspian Railway, running 48 miles from the port of Krasnovodsk on the Caspian to the main line to Samarkand, was also opened for traffic."

The Pan-American Medical Congress meets at the City of Mexico on the 16th inst. "An entire hotel has been taken for the accommodation of the visitors."

A new cotton factory is about to be erected at Orizaba, Mexico, at a cost of more than $3,000,000, furnished by European capitalists.

The government of the Transvaal republic, according to a Johannesburg dispatch, has decided to put in a claim for £1,000,000 ($5,000,000) indemnity against the British Chartered South Africa Company, as one of the results of the raid of Dr. Jameson and his followers into the territory of the Transvaal.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Husband and Wife—Note.

The Supreme Court of Georgia held, in the recent case of Strickland vs. Vance, that one who takes a promissory note payable to himself, signed by a man and his wife, apparently as joint principals, is in law chargeable with a knowledge of the real consideration of the paper and of the wife's true relation thereto, whether he conducted in person or by another the negotiations leading to its execution and delivery to himself; and if, in fact, the wife signed the note as surety for her husband it was void as to her, and she could maintain against the payee an action for the recovery of money or property belonging to her separate estate with which she had parted in settlement of the note.

Bank—Trade Name—Good Will.

The Supreme Court of Wisconsin held, in the recent case of The Bank of Tomah vs. Warren, that the trade name under which a banking business has been profitably conducted for a number of years is a part of the good will, and an assignable asset, and as such will pass to an assignee under a voluntary general assignment; that the mere discontinuance of a banking business for eight months, while the same is in the hands of an assignee, will not preclude the assignee's vendee from asserting his right to use the former trade name which passed by the assignment and transfer; and that the wrongful use of a trade name may be enjoined without proof that anyone has actually been deceived.

Telephone Facilities—Constitutional Law.

The Supreme Court of Indiana held, in the recent case of The Central Union Telephone Company vs. Fehring, that section 5529 of the Indiana Revised Statutes of 1894, which provides that a penalty of $100 may be recovered from a telephone company for its failure or refusal to supply, without discrimination or partiality, telephone connections and facilities to all applicants within the local limits of its business who will comply with its regulations, was constitutional. This act requires telephone companies not only to furnish an applicant with an instrument and properly connect the same with its exchange, but also to supply all the connections and facilities necessary to the use of the instrument, including connection with any other subscriber when requested during hours that the exchange is open for business.

Important Telephone Decision.

Judge Showalter, of the United States Circuit Court at Chicago, has rendered a decision of importance to the telephone industry, which is to the effect that the Watson telephone switch patent had expired July 30, 1895, by virtue of its having been taken out in Canada by the inventor July 30, 1890. The discovery that a Canadian patent had been issued on the invention was, it appears, made only recently by the Western Telephone Construction Company, which concern was the principal defendant in the suit brought by the combined Bell and Western Electric combination. It is said that under the decision in the Bates refrigerator case the discovery of the Canadian patent shortens the time of the Watson concession five years, it having been ruled that a patent taken out in a foreign country acts against a later patent issued in this country.

Written Contract—Parol Evidence.

The Supreme Court of Minnesota held, in the recent case of The Wheaton Roller Mill Company vs. The John T. Noye Manufacturing Company, that where in the absence of fraud, accident or mistake the parties have deliberately put their contract into writing, which is complete in itself and couched in such language as imports a complete legal obligation, parol evidence is inadmissible to introduce into the contract a term which is not contained in the writing; that the only criterion of its completeness or incompleteness is the writing itself, and that it cannot be proved to be incomplete by going outside of the writing and proving that there was an oral stipulation entered into not contained in the written agreement. The court held, however, that while the writing itself is the only criterion, it is not necessary that its incompleteness should appear on its face from mere inspection, but it is to be construed, as in any other case, in the light of its subject matter, and the circumstances in which, and for the purpose of which, it was executed, which evidence is always admissible in the construction of written contracts in order to put the court in the position of the parties. The court repudiated the doctrine that, in the case of written contracts for the sale of personal property, which are silent on the subject of warranty, an oral warranty may be proved on the ground that it is merely collateral to the contract of sale, and it appearing that the defendant contracted to furnish and set up in plaintiff's mill an engine and boiler of a specified make, size and power, held that there was no implied warranty that it would furnish power enough to operate the mill.

Contract—Letters—Evidence.

The case of Earle vs. Sayre, recently decided by the Supreme Court of Georgia, arose upon an action in which the plaintiffs sought to recover upon a contract which they alleged had been made in writing between themselves and the defendant by means of an epistolary correspondence, by the terms of which, as they insisted, the defendant was unequivocally bound to pay to them the price of certain goods. The defense was that no complete and binding contract for the purchase of the goods had ever been made by the defendant, for the reason that the letters composing the correspondence plainly showed that the minds of the parties had never met and that they had never "agreed to the same thing in the same sense." It appeared from an inspection of the correspondence that, if not clearly susceptible of the construction put upon the letters by the plaintiffs, they were at least ambiguous, and it further appeared that the trial judge allowed both the plaintiffs and the defendant the fullest latitude in introducing evidence to explain the true intent and meaning of the letters The court held that the defendant could not complain that the jury found in favor of the plaintiffs' version of them, there being ample evidence to support the verdict.

Insurance—Account Books—Evidence.

In the case of Levine et al. vs. The Lancashire Insurance Company, lately decided by the Supreme Court of Minnesota, it was held that in an action against an insurance company for the value of a stock of merchandise destroyed by fire, day books, ledgers and other books of account, kept in the usual course of business, showing the amount and value of the goods, were competent evidence, when properly verified or authenticated; that the fact that some entries were made by the bookkeeper from temporary slips furnished by salesmen will not affect their character as original entries; that while the fact that books of account contain some errors affects their credibility, yet in the absence of evidence that the books were fraudulently falsified, it will not necessarily render them incompetent; that in an action to set aside an award it is competent for one of the arbitrators (who refused to join in the award) to testify as to acts of partiality and misconduct on the part of the other arbitrators, and that where an insurance company objects to the sufficiency of proof of loss on one ground alone this amounts to a waiver of all other objections. The court further held, that where on a trial a party objected to the admission of certain books of account on the ground that they were not properly authenticated under the statute, he could not be heard to urge on appeal that the statute was inapplicable, and that they should have been authenticated according to the common law rule.

Insurance—Policy—Alteration.

The Kentucky Court of Appeals held, in the recent case of the Phoenix Insurance Company vs. McKernan, that any material alteration of a written contract made by the obligee without the consent of the obligor invalidates the contract; that an alteration may be a material one, although it does not make the contract more disadvantageous or burdensome to the obligor than the true contract made and assigned by the parties; that an intention to defraud is not necessary to make the change work a forfeiture of the contract; that where a policy of fire insurance upon a building was by the procurement of the insured and without the consent of the insurance company so altered after its delivery as to include the "shelving, counters and drawers" in the building, the policy was thereby rendered void; that in an action on the policy the court erred in submitting to the jury the question as to whether the alteration was made with fraudulent intent, as that was immaterial; that courts may reform written contracts so as to make them conform to the real agreement, but an obligee in a contract cannot do so; that if it were a fact that the alteration in this case was made for the purpose of conforming the policy to the verbal agreement between the parties, that did not prevent it from rendering the contract void, and that the withdrawal of any claim on account of the loss of the additional property included by the alteration does not have the effect to restore or revive the contract really executed and delivered.

BUSINESS NOTES.

Russia's Trade With Us.

A St. Petersburg dispatch to the London *Times* with reference to the recent visit to the United States of Prince Khilkoff, Russian Minister of Communication, dwells upon the great increase of American trade with Russia. It says: "American locomotives are being imported. Americans are building a locomotive works on the Volga, and are laying naphtha pipe line in the south, while armor plates for the Russian Admiralty are being made in the United States. It is the belief that the object of the Prince's tour was to give the Czar a report on American railways, which will be useful and instructive in the present active developments of Russian railways."

Hardware Men to Meet.

The third convention of the National Hardware Association of the United States is to be held in Philadelphia Wednesday, Thursday and Friday of next week. The Philadelphia *Ledger* says: "There is a good deal of business to be transacted, and it is expected that the members will devote themselves mainly to this feature of the annual gathering, leaving but little time for the various forms of recreation that are frequently enjoyed on the occasion of conventions. It is not anticipated that many ladies will accompany the members who come from a distance. The National Association numbers among its members over 200 of the largest jobbing hardware firms in the country, and it represents a large investment of capital. The business transacted by those in membership is said to aggregate a total value of $150,000,000 a year."

Petroleum Market in the East.

The *Engineering & Mining Journal* says: "Reports from the East show that a change is gradually going on which is of some importance to our producers. American petroleum only a few years ago constituted the entire supply in the markets of India, China and Japan. It has been to a very considerable extent replaced in those countries by Russian oil, and the trade is now being further divided by the active competition of new fields. Langkat oil now holds almost as great a share of the Chinese trade as the Russian product, and the other newly opened fields of Borneo, Sumatra and Java are making rapid progress. Although the Japanese oil wells have not done as well as was expected, they furnish a considerable part of the home supply. It looks very much as if the Far East would, in a few years, cease to be a customer for American oil, and would take its supplies entirely from the new fields which are now in course of development."

Growth of European Colonies.

Lord Rosebery's innocent reference to the growth of the British empire and the increasing responsibilities suggest the following comparisons of the total area of the territories belonging to each European power, including that of the mother country:

Territories belonging to	*Square miles* 1884.	1896.	*Actual addition.*	*Area* 1896 *compared with* 1884.
France	869,000	3,595,000	2,726,000	4 times
Great Britain	8,530,770	11,129,860	2,599,090	1⅓ times
Germany	208,670	1,231,740	1,023,070	6 times
Belgium	11,370	1,011,370	1,000,000	89 times
Italy	110,620	610,620	500,000	5½ times

The London *Times* says: "We are all living in glass houses, and that 'land grabbing,' if the German press prefers to call it so, is not confined to one power. In proportion to the extent and responsibilities of the British empire and the demands which compel us to be constantly lengthening our cords and strengthening our stakes we have sinned greatly less than any other power. We cannot conclude more appropriately than by quoting a passage reproduced from the *Vossische Zeitung* by the Berlin correspondent of the *Times* in our issue of Saturday, simply changing 'Britain' and 'British' for 'Germany' and 'German,' and vice versa: 'It is evident that Britain cannot silently give way when British interests are directly or indirectly endangered by German plans, and that in such cases Britain should appeal to the same rights as those claimed by Germany. This is the opinion of the vast majority of the British people."

The New Steel-Making Process.

The *Engineering and Mining Journal* says: "Paragraphs have been going the rounds of the southern papers in relation to the promising future of steel-making in Alabama, based upon the alleged success of the so-called Hawkins process. This process has been for some time carried on in Birmingham, but only on a small scale and with very doubtful success, as we are informed on good authority. No large quantity of metal has yet been made, and the specimens so far produced have been very far from meeting the usual tests of merchantable steel. It is to be regretted that currency has been given to statements which do not seem to be supported by the facts, since they will only serve to do harm in the end. As our readers know, we have always believed in the possibilities of steel-making in the south, and have urged upon the Alabama iron men the advantages of putting at least a part of their product on the market in finished form. The fact that they have succeeded in turning out basic pig iron of excellent quality indicates that there is a field for the introduction of the basic steel process which promises far better results than can be expected from the expenditure of time and money on empirical processes of doubtful utility."

Trade Prosperity Abroad.

The London *Daily Financial News* says: "From almost every quarter come evidences of improved trade and greater prosperity on the part of the working classes. In Austria-Hungary, for instance, it is stated that the imports for the first nine months of this year show a decrease in grain and live stock, while tobacco, wool and coal have considerably increased. In other words, less food had to be obtained from abroad, and the people have been able to spend more on such comparative luxuries as tobacco and clothing. It is also not unsatisfactory to find that the exports exceeded the imports for the nine months by 24,000,000 florins, the result being not a little due to the large quantities of sugar and grain recently exported."

German Textile Operatives.

The growth of the textile industry in the German empire is shown in the result of last year's census of mechanics reported to the State Department by Consul Sawter, at Glauchau. In this industry over 1,000,000 persons are employed, and the interesting fact is noted that there has been a yearly decrease of male and a corresponding increase of female employees. The exact number of employees was 1,017,112, against 932,592 in 1882. Since 1883 the males decreased from 582,070 to 552,230, a change of 29,840. Their places have been filled by females, whose number grew from 350,522 to 464,316 in the same period. One curious result of these changes is the improved sanitary surroundings and comfort provided for the employees. Their every interest in this way is being considered to encourage good and satisfactory labor. Washrooms and lockers for non-working apparel are provided, and dining-rooms, where coffee and potatoes (the latter one of the chief components of the luncheon) are roasted or boiled in a special wire receptacle. There are also separate lunch-rooms for whole families employed in the factories, where they can distribute food from the family basket and enjoy together the recreation afforded by the noonday meal. Some of the larger factories have a buffet where can be purchased at a merely nominal price beer, sausages, rolls, coffee, cake or any little luxury in the form of pastry.

Chief Wheat-Exporting Countries.

The London *Times* says: "The sustained advance in the price of wheat since the new cereal year began six or seven weeks ago, serves to impart a special interest to the communication made by Sir John Lawes and Sir Henry Gilbert to the recent International Agricultural Congress. They showed what had been the exports of wheat for the last quarter of a century from the chief wheat-exporting countries of the world. In the subjoined table the details are summarized, the annual averages being given for each indicated period of five years. The unit adopted is the metric-tonne, which is equivalent to 1,000 kilograms, or 2,204 pounds avoirdupois, and differs but little, therefore, from the imperial ton of 2,240 pounds. Parentheses are used in those cases in which the totals were not available for all the years of the period, but the average is none the less the annual one, being calculated on the number of years for which the totals were forthcoming. It will be seen that only for the United States of America and British India were the totals obtainable for every one of the twenty-five years, whilst in the lower half of the table the first quinquennial period is omitted because the exports in 1871–75 were, for the countries concerned, utterly trivial:

ANNUAL AVERAGE EXPORTS OF WHEAT, AND FLOUR RECKONED AS WHEAT, FROM THE CHIEF EXPORTING COUNTRIES OF THE WORLD, IN METRIC-TONNES.

Period.	*United States.*	*Canada.*	*British India.*	*Russia in Europe.*

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The volume of business improves slowly in nearly all lines. The most active demand is among jobbers in dry goods, clothing, millinery, shoes, leather and hardware, and in leading industrial lines, nearly 200 mills, factories and foundries having started up this week, one-half of them in iron, steel, machinery, tools, carriages, lumber, glass, woolen and cotton goods lines. About 130 other industrial establishments have increased working forces or working hours, or both, among them nineteen iron and steel establishments, ten glass works, and four factories, each making lamps, clocks, woolen goods and cotton. A partial record of the number of men given employment in industrial lines since November 6 shows an aggregate of nearly 30,000. Demand for iron and steel has not increased after the activity of a week ago, but prices are firm — in some instances higher — and the trade continue confident of a large business during the coming year. Cotton and cotton goods continue firm and unchanged in price; print cloths have an upward tendency. Wool is higher on more active demand, but manufacturers are not supplying in excess of wants. Other advances in prices are for leather, shoes, white pine lumber, petroleum, lard, sugar, and for wheat, corn and oats. The strength of the statistical position of wheat is as marked as heretofore, and renewed inquiries are received from Australia. The conspicuous decreases in price are those for coffee, pork and turpentine. Western jobbers report an increase in mail orders, and that between-seasons in some lines alone prevents improvement in demand from jobbing being general. Mercantile collections throughout central western and southern states are easier, but complaints are still heard from the west.

Bank clearings leaped up 20 per cent. this week compared with a week ago, the total being $1,190,000,000. Contrasted with the average weekly total in four preceding weeks, the gain is 22 per cent. When compared with the corresponding week last year, the increase is only 1.5 per cent., but contrasted with the second week of November, 1894, and the like week in 1893, the increase is 17 per cent. in each instance. The corresponding total in 1892 was large, and the current week's aggregate, as compared with it, shows a falling off of 11 per cent.

October railway earnings, reflecting ante-election conditions, make the poorest showing of any month for several years. The October total of 121 roads is $48,149,580, a decrease of 4.3 per cent. from a year ago. The trunk lines, coal roads and Mexicans show gains, while the central western, grangers, southern, southwestern and Pacific roads report decreases. Losses by individual roads outnumber gains more than two to one. For ten months earnings of 116 roads aggregate $389,295,100, a gain over ten months in 1895 of 3.3 per cent., when the gain was 4.7 per cent. over 1894. The grangers show the largest increases, followed by the trunk lines, the southern, Pacific and coal roads.

Net earnings of 62 roads for September aggregate $16,467,566, a decrease of eight-tenths of 1 per cent. from September, 1895, whereas gross earnings of those roads fell off 2.6 per cent. For the nine months ending September 30 the gross earnings of 73 roads, including most of the leading systems of the country, aggregate $448,030,462, and the net earnings $139,148,214, gains, respectively, of 3 per cent. and one-tenth of 1 per cent. over a year ago. There have been 258 business failures reported this week, 35 more than last week, but 21 fewer than in the corresponding week one year ago, 22 fewer than in the like week two years ago, and 112 fewer than in the corresponding week of 1893.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal amount to 4,664,515 bushels this week, the heaviest week's total since the second week of September, 1893. This is an increase of about 1,200,000 bushels over last week, of more than 1,300,000 bushels over the corresponding week one year ago, more than 1,700,000 bushels as compared with the like week in 1894, a gain of about 2,000,000 bushels as compared with the corresponding week of 1893, and of more than 700,000 bushels as contrasted with the like week in 1892. Exports of Indian corn have also increased heavily, amounting to 3,782,000 bushels this week, compared with 2,247,000 bushels last week, 1,921,000 bushels in the like week last year, and very much smaller totals in corresponding periods in three preceding years.

Reports of possible hostilities with Spain over Cuba have been used in the New York stock market to neutralize the bullish speculative feeling aroused by the election and its effect on business and the money market. This has checked the rising tendency in prices and occasioned reactions. Professional speculators have worked for lower prices to regain stocks at advantageous figures or to cover short contracts, the bear interest having increased considerably. The activity and strength of low-priced stocks is a feature. The demand for municipal bonds is growing, and the large oversubscription for the issue offered by New York city has attracted attention to this department. The American market in London has been restricted by high money and a decline in "Kaffirs." The Bank of England is credited with the sale of $4,000,000 United States government bonds in this market early in the week, causing a sharp rise in exchange, but the rate for demand sterling has receded to 4.85½. Gold imports have stopped, the total since August being $70,000,000.

Wholesale merchants at Toronto report trade improved among grocery and hardware dealers, due in part to the stimulus of cold weather. There is also an improvement at Montreal, where the trade feature continues to be heavy exports of apples, cheese and butter. Lumber shipments from New Brunswick have fallen off, but an early increase is expected. Rains have prevented farm work on Prince Edward Island. There is no change in trade throughout Nova Scotia. Bank clearings at Winnipeg, Hamilton, Montreal, Toronto and Halifax amount to $26,006,000 this week, an increase of about $1,800,000 as compared with last week, and about $600,000 as compared with the like week last year. There are 44 business failures reported from the Dominion of Canada this week, as compared with 50 last week, 45 in the week one year ago, 33 two years ago, and 35 three years ago.

FINANCIAL.

The Money Market.

Increasing ease has continued to rule in the New York loan market. The somewhat unfavorable bank statement of last Saturday was disregarded, as a reflection of conditions prior to the election. A favorable showing is expected to-day, as the banks have gained for the past ten days both from the interior movement of money and the return of hoarded gold. The extent of the latter movement is indicated by the fact that the Treasury gold reserve has risen from $115,000,000 to $123,100,000, while about $5,000,000 of the gold turned into the banks here has been deposited in the Clearing House vaults against certificates of deposit. Money on call at the Stock Exchange has been abundant at rates varying from 2½ to 5 per cent. as a maximum. Commercial paper of the best grade has been in inadequate supply for constantly increasing demand. Both local and country institutions are in the field as buyers. Double names are quoted at 5@5½ per cent. Transactions in time money are once more being effected, business at the opening of the week being restricted by the belief of borrowers that rates would relax still further. Loans are, however, being made on the basis of 4½@5 per cent. for thirty to ninety days, and 5 per cent. for longer periods.

The New York Banks.

Last Saturday's statement of averages of course represented the divergent influences before and after the election. The latter predominated and the statement was, therefore, looked on as exhibiting the last of the unfavorable situation. The principal changes were the decrease of $4,070,700 in loans and the reduction of $8,000,000 in deposits, while the legal tenders decreased $5,579,000, and specie was increased $924,000. As a result of the other changes the surplus reserve decreased $2,652,825, the figures of the statement comparing as follows with those of the preceding week:

	Oct. 31, '96.	Nov. 7, '96.	Changes.
Loans	$446,250,400	$442,179,700	Dec. $4,070,700
Deposits	446,445,900	438,437,600	Dec. 8,008,300
Circulation	20,495,800	20,516,300	Inc. 20,500
Legal tenders	66,296,600	60,717,200	Dec. 5,579,400
Specie	62,778,100	63,702,600	Inc. 924,500
Total reserve	129,074,700	124,419,800	Dec. 4,654,900
Reserve required	111,611,475	109,609,400	Dec. 2,002,075
Surplus reserve	17,463,225	14,810,400	Dec. 2,652,825

The surplus a year ago was $19,260,050, against $61,669,650 in 1894.

The Boston Banks.

	Nov. 7, '96.	Oct. 31, '96.	Changes.
Loans	$161,955,000	$162,542,000	Dec. $587,000
Circulation	10,283,000	10,285,000	Dec. 2,000
Deposits	101,037,000	98,316,000	Inc 2,721,000
Due from reserve agts	16,161,000	16,208,000	Dec. 47,000
Legal tenders	5,700,000	6,037,000	Dec. 337,000
Specie	9,610,000	9,627,000	Dec. 17,000
Surplus reserve	1,998,800	2,073,229	Dec. 74,429

Foreign Exchange.

Irregularity rather than strength has been the feature of the exchange market. The proceedings have been, on the whole, dull, but for the sharp rise in rates on last Monday, posted quotations being marked up 1c. for both long and sight to 4.83½@4.87, while actual business in bankers' demand sterling was quoted as high as 4.86. The explanation of this was that a large block of government bonds—no less than $4,000,000—had been sold for foreign account. The rumor both here and in London was that the bonds belonged to the Bank

of England, which had held them since the syndicate operations of February, 1895. This has not been confirmed, however. In any event the transaction seems to have been closed in a day, and the exchange to make remittance of the proceeds provided without delay. After this was accomplished the market dropped back, posted rates being marked down on Tuesday to 4.82½@4.86, at which figures they stood till Friday, when the demand rate was advanced ½c. to 4.86½. Actual business in demand sterling ranged after Monday at between 4.85@4.85½, the market being very dull, though its tone was affected both by the firmness of money in London and the increasing ability of merchants here to obtain loans of money. The supply of commercial bills has not been particularly large, while the paying off of loans of sterling continues. Offerings of the exchange hoarded prior to the election are apparently exhausted, and foreign operations in the stock market have been mixed and without tangible influence on rates. Monday's advance produced temporary fears that gold might be exported. The further yielding of rates, however, put this at rest for the present. Some small amounts of gold have continued to come in, amounting for the week to $1,375,000, making the total imports of specie since August about $70,000,000.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

4.81½ @ 4.82	4.82½ @ 4.82¾	4.81½ @ 4.82	4.81¾ @ 4.82	4.82 @ 4.82¼	4.82 @ 4.82¼

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.86@4.86¼; commercial bills, 4.81; francs, 5.21¼@5.19⅜; reichsmarks, 94½@95¼.

The Bank of England directors left the minimum discount rate of the institution unchanged on Thursday at 4 per cent. The bank for the week lost £342,000 in specie, but its proportion of reserve is 52.40 per cent., against 51.96 per cent. last week. The decrease in specie is due to withdrawals for domestic circulation. It is stated that £500,000 of the Japanese indemnity fund was released on Wednesday. The bank this week also made large loans to the London open market, discount there being firmer at 3⅝@3¾ per cent., while call money was up to 3½@4 per cent., the fortnightly settlement in the Stock Exchange developing pressure for money, while prices were lower under the lead of the Kaffir mining group, which was affected by reports that the Transvaal republic had demanded an indemnity of £1,000,000 from the British Chartered Company on account of Jameson's raid. Paris and the continental money markets are firm, discount being 1¾ per cent. in Paris and 4⅝ per per cent. in Berlin.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending November 6, 1896:

	1896.	1895.
Dry goods	$1,542,773	$2,176,583
General merchandise	6,272,477	9,248,835
Totals for the week	$7,815,250	$11,425,418
Previously reported	382,520,472	442,673,113
Since January 1	$390,335,722	$454,098,531

The exports (exclusive of specie) from New York to foreign ports for the week ending November 10, were $840,789 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$7,675,146	$7,461,548
Previously reported	323,426,646	290,271,351
Since January 1	$331,101,792	$297,732,899

Silver.

The silver market this week has been slightly lower, its tendencies being governed entirely by the condition of Eastern exchanges. It is suggestive that the Bank of Bombay has raised its discount rate from 7 to 8 per cent. In London the quotation for commercial bars fell from 30d. per ounce to 29 13/16d., with a corresponding decline here from 65¼c. to 64⅞c. Transactions in silver bullion certificates in our market aggregated 131,000 ounces, at a decline from 65¼ to 64⅝. The certificates now outstanding amount to 750,000 ounces. A month ago they were 1,044,000 ounces.

THE STOCK MARKETS.

The New York Stock Market.

Public interest and buying power have continued to increase during the week, and were reflected in the general advance of stock market values and the decided broadening of speculative activity. On the other hand, a large section of the professional element in Wall street have opposed the advance and either worked for a reaction or indulged in short sales. The belief in such circles has been that the market has advanced sufficiently to discount the immediate effects of the election on general business and on the position of railroad and other corporations. The temporary recession on Wednesday and Thursday last was, however, based mainly on the reports that Cuban affairs were approaching a crisis and that a rupture between the United States and Spain was in prospect, and similar rumors on Friday were made the occasion for a sharp attack on prices, resulting in some liquidation, with a corresponding unsettling of speculative sentiment. The firmness of the London money market and the disorganization of the Kaffir mining speculation there, due to a report that the Transvaal republic had made a demand for an indemnity of $5,000,000 from the British South African Company, checked London's growing enthusiasm for American securities and resulted in some temporary foreign selling. The most notable incident of this kind was the sale here of $4,000,000 government bonds, which reports credited to the Bank of England itself. At the close of the week, however, the London market having passed safely through a fortnightly settlement, was again displaying a favorable attitude toward our market. Among the bullish influences of the week, due weight must be given to the heavy oversubscription for the $16,000,000 New York city 3½ per cent. bonds and the generally high average of the bids, as well as to the decided revival of an investment demand for municipal bonds and other high-grade investments. The further advance in the wheat market cannot be neglected, as it had under present circumstances a direct tendency to increase the confident feeling in speculative circles. Money has worked decidedly easier and is obtainable on time at rates which favor extended operations in the stock market.

The opposition of professional speculative interests to the advance has been referred to. It cannot be said that this was due to the prevalence of any ideas that the market was likely to meet a serious check. In fact, the larger class of operators seem to have encouraged a reaction, simply as affording opportunity for the acquisition of stocks on more favorable terms, while the traders who sold short were prompt to cover their contracts as soon as the market presented evidences of renewed purchasing. One of the features of the week was the renewed activity and strength in many of the long dormant securities, and especially in stocks that have been selling at low figures. This was partly the result of manipulation by pools and parties in interest, and partly the transfer of the buying demand, both public and professional, to a class of securities which had not yet moved in proportion to the rise in the more active classes.

This renewed interest in the low-priced stocks has indeed been the chief feature of the week. London's purchasers were largely in this class, among the stocks prominently affected being Southern Railway preferred, Northern Pacific and Union Pacific, and others of similar standing. The Atchison securities were affected by the so-called "snap" receivership proceedings in Kansas, but rallied when the case was taken up by the United States courts, which, it seems, still retain jurisdiction over the property. American Spirits, the successor to the reorganized Distillers' Company, were a feature, the common stock advancing from 8¾ to 14 on pool manipulations supplemented by talk of dividends in the preferred. The movement in Northern Pacific preferred carried it from 24⅞ to 28 on the theory that the stock was comparatively too low, and dealings have also commenced on a large scale in the new preferred, "when issued," which sold up to 35½. Hocking Valley, Wheeling & Lake Erie and the Ohio roads have been favorably affected by the disposition to advance soft coal rates.

The leading speculative stocks were affected more or less by the disposition of professional interests to work for lower prices. Sugar was erratic and heavy, rising to 123¾, only to fall on Friday to 119, with a recovery to 120½. It is argued that the approach of the session of Congress and the possibility of tariff revision is adverse to the Company. General Electric rose to 35½, but declined to 33 on Thursday, though a large increase in the company's business is talked of. Burlington has been the leader of the Grangers on the reputed increase of corn traffic. The stock rose from 82 to 83¾, reacted to 81⅝, and rallied to 82¼. St. Paul was heavy, falling from 79⅝ to 77⅜, while Reading, all assessments paid, failed to respond to the advancing tendencies and fell from 31¾ to 30⅛.

Boston Stock Market.

The stock market is dull but strong. Stocks seem to be well held, and margined speculative accounts have not come into the market to any extent. Brokers call it a bull market. Nearly all the active stocks are higher than a week ago, Atchison showing a gain of about ½ point, Chicago, Burlington & Quincy nearly 4 points, New York, New Haven & Hartford 7 points, Calumet & Hecla 5 points, Boston & Montana 6 points, Butte & Boston 2 points, General Electric 4 points, Rubber 4 points, Sugar 4 points, and Leather preferred 3 points. Bell Telephone has dropped 3 points.

Prices of principal shares, with volume of transactions, have been as follows:

General Mention.

The general reorganization committee of the Oregon Railway & Navigation Company, Alfred S. Heidelbach chairman, notifies holders of certificates of deposit of the New York Security & Trust Company, United States Trust Company of New York, and the State Trust Company, representing, respectively, consolidated mortgage bonds, collateral trust mortgage bonds and stock of the above company, that on and after November 23 the New York Security & Trust Company will, upon presentation of the certificates of deposit above mentioned, deliver to the holders thereof in exchange the new securities of the Oregon Railroad & Navigation Company, as agreed by the plan of reorganization. For the purpose of determination of the securities to which the holders of certificates of deposit may be entitled, it will be necessary that a few days elapse between the deposit of the certificates and the delivery of the new securities.

The reorganization committee of the Oregon Improvement Company have fixed December 15 as the limit within which securities may be deposited with the Manhattan Trust Company, New York, or the Old Colony Trust Company, Boston, without penalty. Notice is given that thereafter securities will be received only on the payment of a penalty equal to 1 per cent. of the par value thereof.

CONTINUED IMPROVEMENT.

MORE FACTORIES, FURNACES, MILLS AND SHOPS STARTED.

INCREASED DEMAND FOR DRY GOODS, MILLINERY, SHOES, HATS, HARDWARE AND OTHER STAPLES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, November 13.—The increased confidence in the business situation has caused a better demand for nearly all kinds of goods, and values are hardening. There is no boom on in any line, but a good conservative business in all. Money is easier and trade is feeling the effects of it. The call for money is not large, and probably will not be for some time. Call money is quoted at 5 per cent., while mercantile paper is quiet at 6 per cent. The boot and shoe market is quiet owing to the advance manufacturers are obliged to get on account of the rise in leather. Leather holds very firm at the advance, while hides are in small supply and higher. Iron and steel show marked improvement, and there is also a better feeling in the lumber market.

Philadelphia, November 13.—Wool shows but little change; prices are firm, and there is a disposition to hold stocks. The result of the presidential contest has stimulated trade with some manufacturers, but there is not as yet any great demand for goods, and collections continue poor; there is, however, an increased feeling of confidence and a better outlook, with a fair demand for dry goods, although no great activity in the retail trade, yet a disposition is manifested to buy a little more freely. There is a better feeling in lumber, and orders have been freely placed; prices are low, but steady, and a general improvement is looked for. There is some improvement in tobacco, but it is too late in the season to estimate on any definite results; factories at this time are more or less idle, being engaged in making up and reporting stocks to the United States government. Havana is scarce and high, with no prospects of any crop for some time to come. A better feeling in iron with stronger prices, but the immediate condition does not show much business.

Pittsburgh, November 13.—A better feeling prevails in all lines and at points tributary to this city. An increase is noted in the volume of business, and prices are well maintained. The outlook is promising for a good late fall and winter trade. The business in iron was probably not as large as the week previous, but prices are kept up, and the trade generally are sanguine.

Buffalo, November 13.—The result of election has tended to restore confidence, and a better feeling seems universal. Indications point to some increased activity in general business, and business men are very hopeful for the future. There is a total absence of anything approaching a boom, and the general expression is that we do not want one. Some new manufactories have started, the most notable of which is the new plant of the Tonawanda Iron & Steel Company, employing 300 hands; others that have been idle have resumed, and some that have been running with small forces have largely increased. In financial circles the de-

posits are increasing somewhat, and there are evidences of money that has been hoarded being returned to circulation. Collections are improving. The weather during the past week has not been favorable to retail business.

Baltimore, November 13.—Business this week has been quiet. Clothing and dry goods merchants say it is between seasons now, but there appears to be a better feeling among the trade, with a good outlook for the spring. There has been a marked improvement in collections, more noticeably from the south.

West and Northwest.

Cleveland, November 13.—The tendency toward a general improvement in business is manifested by increased activity along industrial lines, and the feeling is one of encouragement.

Cincinnati, November 13.—Business is irregular, but in the main improved.

Detroit, November 13.—In leading lines a better demand is reported. Manufacturers are busier than formerly and collections show an improvement.

Chicago, November 13.—There has been an increase in sales in all lines, particularly in dry goods, clothing, millinery and shoes. The feature of dry goods was the closing out at auction of the Edson, Keith & Co. stock of $200,000 worth of goods at a satisfactory price. A large number of western and southwestern buyers have been brought in by cheap railroad rates, secured by the Merchants' & Manufacturers' Association, and they have purchased liberal stocks. Mail orders are also enlarged, and the holiday trade is especially good. Leather is selling more freely at fall prices, and hides have advanced 1c. since the election. Orders for light hardware are larger, and increased sales of bar iron, steel and plates are reported. Prices have advanced $2 per ton. There is a quieter feeling in pig iron, consumers having bought last week, and sales are light, but the recent advance is well maintained. White pine lumber is fairly active at 50c. to $1 advance. Yellow pine is firmer, and hard wood is selling better. Grocers report a good business, with everything well held. Butter, eggs and potatoes have advanced owing to light receipts, but poultry and apples are lower, with increased offerings. Wool receipts, 336,725 pounds.

Louisville, November 13.—A decided improvement in general trade is manifest and a much better feeling is apparent. While orders for merchandise are small, they are increased in number. Leaf tobacco is firmer, and fine brands of whisky are in better demand. Collections are improving.

St. Louis, November 13.—There is a decided improvement in all branches of trade, but as it is between seasons in a majority of lines purchases, especially by retailers, are largely for immediate shipment and use. A few manufacturing industries are restarting, many others are increasing their output and travelers are sending in some orders dated ahead. A boom is not expected, neither is it wanted, as a steady betterment is considered likely to be more lasting. The lesson of the depression is also likely to manifest itself in conservatism, at least for a time. Values are advancing, but not to an unhealthy extent and principally on goods which are greatly below normal prices. The pig iron and iron and steel markets show a strong demand and at proportionately higher prices than other commodities. Hides continue to advance, leather now acting in sympathy, and the finished product will shortly advance in turn. Banking officials are highly elated at the turn of affairs, reporting larger deposits, and are discounting with greater freedom.

Kansas City, November 13.—Business is quiet. Collections better.

Milwaukee, November 13.—A safer feeling pervades business circles and better results are expected, though the volume of business remains, as yet, restrained. Collections are slow.

St. Paul, November 13.—Compared with previous weeks, there is a marked improvement in all lines, particularly in dry goods, boots and shoes, hardware and leather. The steady advance in the price of wheat and the seasonable weather are thought to contribute to this in no small degree. Collections are excellent.

Minneapolis, November 13.—The feeling of confidence noted last week is still further shown by larger orders in some lines from country merchants. Sash and door manufacturers note orders for stock from those who have for many months ordered only for immediate wants. Furniture manufacturers are receiving more satisfactory advance orders. Flour is firmer in price, and the production is large. Lumber is quiet, but prices firmer. Country collections are good.

Duluth, November 13.—Heavy sales of iron ore have been made to eastern parties during the week, but this comes too late in the season to create any unusual activity in mining, except to cause a greater amount of underground work during the winter. A better feeling prevails in trade circles generally and collections are reported easier.

Omaha, November 13.—Trade is very quiet and collections dull.

Sioux Falls, November 13.—There is a better feeling generally with tradesmen. Purchases are made more freely and in larger quantities. In spite of severe weather retail trade is good. One-fourth of the grain is in stack, farmers selling freely, and many range cattle are going to market. Collections are easy.

Southern Cities.

Charleston, November 13.—A better feeling is observed in all lines. There are prospects of a good trade for the balance of the season. Collections continue easier.

Savannah, November 13.—Trade has increased and collections are better, confidence being restored, and more money is in circulation. Orders for cotton are coming in. There is an increase in naval stores receipts, but shipments are about the same. Turpentine prices are lower, rosin steady.

Atlanta, November 13.—Trade is good, collections fair.

Augusta, November 13.—Wholesale trade is fair, but jobbers think November will be quiet in grocery and dry goods lines. Collections are fair.

Jacksonville, November 13.—There is a steady gain noted in all branches of trade, with a wonderful increase in collections.

Birmingham, November 13.—Business improves slowly. Prospects are encouraging.

Chattanooga, November 13.—Fear of panic has disappeared. Improvement is looked for. In mercantile lines business has been quite dull during the week.

Nashville, November 13.—Trade is moving in seasonable volume. No particular impetus is noted so far.

Memphis, November 13.—General trade shows an improvement, and a better feeling is observed since the election. Collections are good.

New Orleans, November 13.—General trade shows a disposition to expand under the renewal of confidence in our monetary conditions. Cotton and sugar receipts meet active demand, with stronger markets. The rice market is inactive, but holders are confident. State, city and local securities have appreciated under active trading. The heavy crop movement keeps money in good demand.

Galveston, November 13.—A better feeling exists among merchants of all classes owing to the result of election, and a marked revival in all trades is anticipated soon. The only noticeable improvement thus far is confined to jobbers, who are replenishing their present abnormally low stocks.

Pacific Coast.

San Francisco, November 13.—Changes in commercial markets are all on the basis of higher prices, the most noticeable being those in leather, hides and tallow. Considerable inquiry is being made for wheat from Australia. Prices are firm, while freights are weak.

Portland, November 13.—The improvement in business is slight, but money is offered more freely, and business men feel hopeful. Country orders are more liberal and collections better.

Tacoma, November 13.—General trade is unchanged. Wheat shipments continue heavy. The lumber trade is not so active.

Seattle, November 13.—General trade is firmer and prices are advancing. A Japanese steamship arrived with about 750 tons of silk, teas and curios.

Canada.

Toronto, November 13.—Trade is improving in wholesale departments. In both groceries and hardware orders are more numerous, and colder weather is beneficial to the dry goods trade. Fancy goods are active. Wheat is higher at 85c. at Ontario points.

Montreal, November 13.—Business has not shown much increased activity during the week, but the sentiment is stronger and confidence is being revived. Navigation will soon close, and advantage is being taken of the remaining open season to rush goods through. Exports of apples, cheese and butter are still heavy. There are no notable changes in prices. Heavy rains have caused considerable damage.

Halifax, November 13.—The general tone of trade remains materially unchanged. Collections continue slow. In Prince Edward Island heavy rains have prevented many farmers from getting in their potatoes, and should the weather turn cold considerable loss will result. St. John, N. B., reports lumber exports for the week small, but an improvement is looked for.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only or four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Dry Goods.

The dry goods market is still rather quiet, though the tone is buoyant and dealers are anticipating an improvement in business. The advance in cotton goods has been maintained and the market is quite firm. Printed fabrics are still rather quiet, though some of the mills are taking good orders for spring. The market on those is very firm and prices have an upward tendency, all orders being taken at value. Jobbers are doing well on all classes of printed napped goods. Dress woolens are selling

fairly well, and business is slowly improving. In men's-wear woolens there is a better feeling, and quite a business is being had on reorders.

Wool.

The wool market is very firm and fairly active, while prices are higher. Sales show considerable increase over a week ago. Manufacturers who are in need of wool are buying and paying the advance, while those who have no orders ahead are holding off. The mills are fairly well ordered ahead, and while some of the larger ones discounted the result of the election and bought considerable wool at low prices, none have a great deal on hand. Territory wools are quoted at 33@34c. for scoured fine and fine mediums, with choice staple lots held up to 37c. Fleeces are firm, with offerings moderate and sales small. Pulled wools are selling fairly at full prices. Australian wools are active and very firm, with the markets abroad strong and higher. Carpet wools are firm and fairly active.

THE GOVERNMENT AND THE FARMER.

The Philadelphia *Ledger* says: "The condition of the farming industry in the United States received a very large share of attention during the recent political campaign. The pessimistic orators diligently insisted that the agricultural interests of the country had been sacrificed for other interests; that the agrarian situation was deplorable; that agriculture had been discriminated against by federal legislation, while manufactures and commerce had been stimulated by fostering laws. The fact that agriulture is the only industry represented in the highest counsels of the nation, in the person of the Secretary of Agriculture, should of itself dispel the illusion that the great calling has been neglected by the federal government. No other business interest is thus specifically represented in the Cabinet, or has a better opportunity to secure a hearing in the inner counsels of the administration. This unique distinction was accorded to agriculture without serious dissent, and that industry has derived great benefits from the position given to it in the government. It has been suggested that a Secretary of Manufactures and a Secretary of Commerce might, with equal propriety, be appointed to make our governmental system more symmetrical in its relations to the great callings, but agriculture is at this time the only business calling thus represented. The usefulness of the Secretary of Agriculture is not challenged, but it would be difficult to assign any satisfactory reason why the farming industry should enjoy such distinction while the other interests named are excluded.

"Agriculture has been promoted in many directions by the direct assistance of the federal and state governments. In a timely article in the *North American Review*, 'What the Country is Doing for the Farmer,' Mr. W. S. Harwood points out what has been accomplished by the great number of experiment stations and agricultural colleges receiving national and state appropriations. 'Vast as has been the progress,' says the writer, 'of the United States in manufactures, in invention and the like, there is, perhaps, no branch of our national life which has shown more immense advancement in the past thirty years than that of agriculture.' He goes on to say that since the passage of the Morrill bill, establishing land-grant colleges, institutions having agricultural courses have been located in every state and territory except Alaska. Incidentally thereto a very large number of experimental stations have also been established under government auspices, by which the farmer has been taught how 'to conserve the products of his soil and enhance the value of his labor.'

"Mr. Harwood states that there are at this time about 5,000 students in these agricultural, state-fostered institutions. Nearly 11,000,000 acres of land have been granted to them by the general government and more than $9,500,000 have been realized from the sale of the land thus far put on the market. The value of the buildings and grounds of the agricultural colleges reaches $16,000,000, and the value of their libraries and scientific apparatus is $3,500,000. A table containing the number of graduates returning to the farms from twenty-six state agricultural colleges is presented, showing that in many cases a large percentage engage directly in the work for which they are prepared by the institutions. That this is not the result in all cases is not through any neglect on the part of the government to induce graduates to become practical farmers. The writer animadverts to the disposition of the authorities of some of the agricultural colleges to provide a 'too generous' curriculum by which young farmers are tempted to engage in pursuits other than farming, and insists that the model institution so arranges its course that the student 'will, perforce, become an agriculturist.' This criticism of the management of our agricultural colleges is borne out by the facts. Certain institutions of this character too closely resemble the ordinary college or university, with an agricultural annex as a pretext for the demand for federal or state aid. This is a matter for the attention of the farmers, who complain that modern education tends to draw young men away from the farms to city and town occupations. So far as provision for agricultural education is concerned, the government has generously fostered agriculture, and has aided it in every other way that it can be aided within constitutional limitations."

GOVERNMENT CROP REPORT.

The returns to the Department of Agriculture for the month of November as to the rates of yield make the average of corn 27.3 bushels, which is above the yield indicated by the condition figures in October. Last year the preliminary estimate of yield was 26.2 bushels. The rates of yield in the large principal corn states are as follows:

THE YIELD OF CORN.

	1896.	1895.	1894.	1893.	1892.	1891.
Average	27.3	26.2	19.7	22.6	22.4	26.0
New York	31.7	35.6	28.2	29.3	...	31.8
Pennsylvania	37.1	33.5	32.0	24.3	...	33.3
Ohio	39.9	32.6	26.3	24.3	29.6	33.7
Michigan	37.0	33.8	23.2	23.7	...	29.3
Indiana	32.4	32.6	23.9	...	28.0	32.0
Illinois	40 4	37.4	28.8	...	25.8	31.2
Wisconsin	33.6	31.3	...	...	..	26.7
Minnesota	30.6	31.2	..	..	...	26.5
Iowa	37.7	35.1	15.0	35.4	28.0	36.7
Missouri	26.3	36.0	22.0	27.5	28.0	29.9
Kansas	27.1	26.3	11.2	20.3	23.3	26.7
Nebraska	37.2	16.1	6.0	25.0	28.7	36.3

Using the corn report of the Department of Agriculture as a basis for his figures, Mr. J. C. Brown, statistician of the New York Produce Exchange, has prepared a statement showing the yield in bushels indicated by the report. His figures, with additional comparisons taken from his annual statistical report, are appended, the figures of the yield per acre being based on the value of a condition of 100 for ten years.

Corn crop indication.	*Aug.* 1, '96.	*Nov.* 1, '96.
Condition	96.0	....
Indicated average yield per acre, bushels	27.6	27.3
Area, acres	81,000,000	81,000,000
Indicated crop, bushels	2,235,600,000	2,211,300,000

Actual corn crops.	*Yield per acre.*	*Area, acres.*	*Crop, bushels.*
1895	26.2	82,075,830	2,151,138,580
1894	19.4	62,582,269	1,212,770,000
1893	22.5	72,036,465	1,619,496,131
1892	23.1	70,626,658	1,628,464,009
1891	27.0	76,204,515	2,066,154,000
1890	20.7	71,970,763	1,489,970,000
1889	29.4	72,087,752	2,122,327,547
1888	26.2	75,672,763	1,987,790,000
1887	26.1	72,392,740	1,456,161,000
1886	22.0	75,694,208	1,665,441,000
1885	26.5	73,130,150	1,936,176,000
1884	25.8	69,683,780	1,795,528,000
1883	22.7	68,301,889	1,551,066,895
1882	24.6	65,659,546	1,617,025,100
1881	18.6	64,262,025	1,194,916,000
1880	27.6	62,317,842	1,717,434,543

"The average yield of buckwheat is 18.7 bushels per acre, against 20.1 bushels last year, and 16.1 for the year 1894.

"The average yield per acre of potatoes is 86.8 bushels, which, though not phenomenal, is, nevertheless, above the average for the past two years. The average yield of hay, as indicated by the preliminary returns, is 1.36 tons, against 1.06 last year. The average yield of tobacco is 679 pounds per acre, against 743 pounds last year, and 733 pounds in the year 1894. The European agent notes the lack of trustworthy estimates of the Russian wheat shortage.

"The advance in prices, which is expected to be fairly maintained, will result in increased acreage in Great Britain. Wet weather in October throughout central Europe was unfavorable for the potato crop. A good corn yield has been realized on the lower Danube."

AN ARGUMENT FOR A BOUNTY TO FARMERS.

The *American Agriculturist* says: "Mr. Lubin will again urge the National Grange to declare in favor of a bounty on exports of farm produce in American bottoms. It will be remembered that much of the time at the session of this body a year ago was occupied by this discussion, but the idea was not indorsed. It was curtly dismissed last year by the Farmers' National Congress, and probably will be again at this year's congress at Indianapolis, next week.

"Mr. Lubin returns from his investigations abroad more firmly convinced than ever of the importance of an export bounty. He finds that not only from the United States, but from various European countries, improved agricultural machinery is being largely exported to the cheap land and labor countries of Russia and the southern hemisphere. He emphasizes the probable development of this foreign competition, which we have already fully discussed. At the recent Budapesth International Agricultural Congress this factor was considered, and it seems to be the general impression that the cheap land and labor countries would be stimulated to increase their production by the rise in the world's price of wheat. Realizing all this, the congress concluded that 'each country should so adjust its protective system as to prevent any undue disturbance in the equilibrium of values, and to promote such internal reforms as to remove all possible friction in internal production and distribution.'

"So long as the United States pays out over $200,000,000 each year for crops that ought to be grown within its borders, *American Agriculturist* submits that if the government is going into the bounty business at all, the wiser plan will be to thus encourage the production of the sugar, wool, hides, etc., that we are now importing. We doubt very much if this people will ever authorize a direct bounty on our surplus crops exported to other lands. Certainly the case seems hopeless so long as this nation imports so largely of crops that it should produce at home. We welcome any wise means of developing the foreign market for our agricultural surplus, but we contend that it is not businesslike to pay the freight on wheat sold in England in competition with Argentina, and then pay the freight on sugar from Germany sent in exchange for this wheat. If instead of so much wheat, this country produced all the sugar it consumed, our people would save the freight both ways and the manifold charges of middlemen that flourish on this export and import trade.

"Instead of putting a duty on exports to still further increase the surplus of grain in foreign markets, let us insist on whatever reasonable aid or legislation may be necessary to enable our farmers to produce the wool, sugar, hides and the like, now imported. In the latter case the farmer gets the money in his own pocket, as is shown by the state sugar bounty in Utah and Nebraska; in the case of an export bounty it is mighty doubtful whether the grain grower would ever see a cent of it."

MISLEADING STATISTICS.

The Philadelphia *Press* says: "Some of the writers who set themselves up as 'specialists' on economical and other questions are strangely misinformed. 'An Essay on the Distribution of Wealth,' of which Charles B. Spahr is the author and a New York house the publishers, illustrates this point. A lot of alleged statistics are given to show that the rich are growing richer and the poor poorer every year, which statistics are not worth the paper they are written on.

"It is asserted in this book that 'the statistics' show that two-thirds of the families living in New York city are propertyless. What statistics? Those of the tax office. But any one not a 'student' shut up in a room theorizing who pretends to have knowledge on this subject knows that many of the richest people in the United States live in New York and figure on the tax books as 'propertyless.' They board at the most expensive hotels or rent magnificently furnished houses or apartments but own no property in New York city. Jay Gould for several years lived in that city and paid not a penny of taxes, accordlng to the tax books; in fact, was 'propertyless.' Yet he indirectly paid taxes on many millions invested in that city. These millions were held in stocks and bonds of various corporations, all of which paid taxes on the value of their property to the city, and paid another tax to the state. But in the statistics which Mr. Spahr quotes Jay Gould was returned as one of the poor—a 'propertyless' man.

"If a person has money it brings him no income unless he invests it, and he cannot get an income out of it unless it is put in property that is taxed. Gould's wealth illustrates that fact. His estate was nearly altogether in the shape of stocks and bonds. Millions were invested in western railroads. Those roads were taxed to the fullest extent in Kansas, Missouri and other states through which they ran. The taxes had to be paid before dividends on stock or interest on bonds. As a lien on the property taxes go ahead of anything else. Hence it is untrue to say that Gould's wealth escaped taxation. And the same is true of the property of all rich men. Unless they put their money in colleges, churches or other property of that kind, from which no income is drawn, they do not escape taxation. Perhaps an exception should be made in the case of the rich silver mine owners. But they are few in number.

"All the true statistics demonstrate the falsity of the contention that the rich are growing richer and the poor poorer. As was shown in the *Press* recently from the tax books, while the population has more than doubled since 1860 the number of separate owners of real estate has more than trebled. This leaves out of the calculation property owned by corporations and others. The ownership of railroad stock is distributed more and more each year. Trust companies, mutual life insurance companies and other corporations, made up of thousands of persons, are large owners in railroad stocks and bonds. There is an increasing number of farm owners in the west, and the depositors in savings banks and other such institutions have enormously increased. There is nothing more absurd than this false cry that wealth in this country is being centralized in the hands of a few persons."

BRITISH AGRICULTURAL RETURNS, 1896.

The London *Times* says: "The latest official return issued by the Board of Agriculture enables us to complete our information concerning crops and live stock as at June 4, 1896, the date of collection of the details. To present a comprehensive view of the areas of crops and numbers of live stock in the kingdom, including the Isle of Man and Channel islands, we have constructed this table, the term corn crops, embracing wheat, barley, oats, rye, beans and peas, and green crops, including potatoes, turnips, swedes, mangel, cabbage, kohlrabi, rape, vetches, etc.:

Crops.	1896. *Acres.*	1895. *Acres.*	1896 *compared with* 1895. *Increase. Acres.*	*Decrease. Acres.*
Total cultivated area	47,882,099	47,883,133	....	1,034
Total of permanent grass land	27,973,688	27,831,117	142,571	....
Total of arable land	19,908,411	20,052,016	...	143,605
Corn crops	8,862,608	8,865,338	....	2,730
Green crops	4,429,264	4,399,949	29,315	....
Clover and grasses, under rotation	5,960,449	6,061,139	....	100,690
Flax	74,098	97,225	....	23,127
Hops	54,217	58,940	....	4,723
Small fruit	76,797	74,920	1,877	....
Bare fallow	450,946	494,505	....	43,559
Live stock.	*Number.*	*Number.*	*Number.*	
Horses	2,115,557	2,112,207	3,350	....
Cattle	10,942,423	10,753,314	189,109	....
Sheep	30,853,809	29,774,853	1,078,956	....
Pigs	4,301,328	4,238,870	62,458	....

"The loss of 2,730 acres in the area of corn crops is insignificant when compared with last year's enormous decline of 500,539 acres; nevertheless, it shows that the pendulum has not yet begun to swing in the opposite direction. In the case of green crops the increase cancels only one-third of last year's diminution of 86,165 acres. The loss of 100,690 acres to the area of temporary grass land is, we believe, more apparent than real. The 100,690 acres are probably included in the permanent grass area.

"In the live stock table, it should be understood that horses include only those used solely for agriculture, horses that are unbroken, and mares kept solely for breeding. This year's increase of 3,350 succeeds to an increase of 19,917 head last year, 12,703 in 1894, and 12,038 head in 1893. The addition of 189,109 to the number of cattle compares with losses of 27,482 head last year, 426,758 head in 1894, and 311,863 head in 1893. The increase of 1,078,956 in sheep is substantial, but there was abundant room for it when we recall the losses of 262,965 head last year, 1,737,006 head in 1894, and 1,867,984 head in 1893. The increase of 62,458 pigs follows increases of 444,827 head last year, 516,013 head in 1894, and 12,132 head in 1893. But in 1892 there was a big decrease of 1,006,866."

In the United States about 79 per cent. of the total number of concerns failing had $5,000 or less, and 12 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any simtlar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

DIVIDENDS.

THE AMERICAN COTTON OIL COMPANY.

DIVIDEND NO. 10. PREFERRED STOCK.

No. 46 CEDAR ST., NEW YORK CITY, Nov. 6, 1896.

The regular semi-annual dividend of THREE (3) PER CENTUM upon the outstanding Preferred Capital Stock of The American Cotton Oil Company has this day been declared out of the net profits of the Company, payable on the 1st day of December, 1896, at the Bank of Messrs. Winslow, Lanier & Company, No. 17 Nassau Street, New York City, to the holders of record of such Preferred Stock, upon the closing of the Preferred Stock Transfer Books.

The Stock Transfer Books of the Company will be closed on Thursday, the 12th day of November, 1896, at 3 o'clock P. M., and will remain closed until Friday, the 4th day of December, 1896, at 10 o'clock A.M.

By order of the Board of Directors.

JUSTUS E. RALPH, Secretary.

FINANCIAL.

OREGON RAILWAY & NAVIGATION CO.

To the Holders of Certificates of Deposit of the New York Security and Trust Company, the United States Trust Company of New York and the State Trust Company, representing respectively Consolidated Mortgage Bonds, Collateral Trust Mortgage Bonds and Stock of the Oregon Railway and Navigation Company.

NOTICE IS HEREBY GIVEN that on and after MONDAY, NOVEMBER 23, 1896, the NEW YORK SECURITY AND TRUST COMPANY, No. 46 WALL STREET, NEW YORK CITY, will, upon presentation to it of the certificates of deposit above mentioned, deliver to the holders thereof in exchange therefor the Consolidated Mortgage Bonds of The Oregon Railroad and Navigation Company and the Stock Trust Certificates of the Central Trust Company of New York, representing, respectively, Preferred and Common Stock of The Oregon Railroad and Navigation Company to which such holders may be, respectively, entitled under the provisions of the Plan of Reorganization, dated September 6, 1895, and amended February 5, 1896.

Holders of certificates of deposit who may be entitled to receive bonds in amounts less than $1,000, or to receive certificates representing preferred or common stock in amounts less than one share, may at their election either receive scrip representing such fractional amounts of bonds or certificates, or buy or sell fractional amounts of bonds or certificates sufficient to entitle them to a $1,000 bond or to a certificate representing a full share of stock at prices which will be fixed from time to time by the General Reorganization Committee, the New York Security and Trust Company acting as the agent of the Committee for the purpose of making such sales or purchases.

Arrangements have been made with The Oregon Railroad and Navigation Company, whereby the New York Security and Trust Company will, at the time of delivery of the new consolidated mortgage bonds, also, on presentation, pay the coupon due thereon on December 1, 1896.

For the purpose of determination of the securities to which the holders of certificates of deposit may be entitled and of preparation of such securities, it will be necessary that a few days elapse between the deposit of the certificates of deposit with the New York Security and Trust Company and the delivery of the new securities, and said Trust Company will therefore issue temporary receipts for the certificates of deposit to be ultimately exchanged for the new securities.

Dated NEW YORK, November 9, 1896.

REORGANIZATION OF

Philadelphia & Reading Railroad Company

AND

Philadelphia & Reading Coal & Iron Co.

UNDER PLAN AND AGREEMENT DATED DECEMBER 14, 1895.

23 WALL STREET, NEW YORK, November 6, 1896.

Notice is hereby given that all holders of certificates of deposit of First, Second, or Third Preference Income bonds, Deferred Income bonds, or Stock of the Philadelphia & Reading Railroad Company, under the said Plan and Agreement, who have failed to make payment of any assessment payable as heretofore called under said Plan, and who shall not before November 26, 1896, make payment of all such assessments due thereunder (together with six per cent. interest upon the amount thereof from the several dates when such assessments were due and payable), and also a further sum equal to one-quarter per cent. upon the par value of such bonds or stock deposited, will, upon November 26, 1896, without further notice or action, cease to be parties to the said Plan and Agreement, or to be entitled to any benefit thereunder or in the securities deposited or assessments paid, and will without right of redemption absolutely forfeit their bonds or stock deposited, together with any part of the assessments paid. In every such case the Managers may sell such bonds and stock deposited, and all right in the cash theretofore paid in respect thereof, or the new securities which may be issued in respect thereof, to any purchaser paying such amount as the Managers may determine, and the proceeds thereof will be used for any of the requirements of carrying out the said Plan, and as a reserve for the uses of the New Company, in the discretion of the Managers.

Payments hereunder may be made at our office, as above, or at the office of Drexel & Co., Fifth and Chestnut Streets, Philadelphia, or of J. S. Morgan & Co., London.

J. P. MORGAN & CO.,
Reorganization Managers Philadelphia & Reading Railroad Company, under said Plan and Agreement.

TO THE HOLDERS OF

Philadelphia and Reading Railroad Company's

General Mortgage Bonds,
First, Second, and Third Preference Income Bonds,
Deferred Income Bonds,
Stock.

NEW YORK, PHILADELPHIA, AND LONDON.
November 6, 1896.

Referring to our circular of May 6, 1896, notice is hereby given that after November 26, 1896, no further deposits of the above-described bonds and stocks will be received under the plan of reorganization.

Deposits will be received up to that date, but only on payment of the assessments in full, with six per cent. interest from the dates when the several instalments were due and payable, and a penalty of

$20.00 per $1,000 General Mortgage Bond and First, Second, or Third Preference Income Mortgage Bond:
$1.00 per share of Stock;
.50 per $1,000 Deferred Income Bond.

J. P. MORGAN & CO.,

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

New York Building-Loan Banking Company,

INSURANCE.

1850.—1896.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 21, 1896.

Late returns from some of the close states render it possible to make an approximately accurate statement as to the extent of the sound money majority in the House of Representatives. It is believed that the sound money men in that body will number 202 and the free silver men 155, so that there will be a sound money majority of 47. The sound money men are, of course, mainly Republicans, though a few members of that party will vote for free coinage. The figures show a considerable falling off in the number of Republicans in the House, a decrease, as compared with 1894, of over fifty. As it is, however, the majority in favor of sound money is sufficient and decisive. Touching the nature of the monetary legislation which will be brought forward in the House, nothing having the stamp of authority has been made public as yet. Indeed, one can scarcely look for suggestions of this kind until it shall have been determined whether the plan of calling an extra session will be adopted, for the House just elected will not, in the ordinary course of events, begin its deliberations until December of next year. On the other hand, of course, the fact will not be forgotten that the organization of the present House will be continued, as far as possible, in its successor, the same party remaining in control.

Naturally enough, the great topic of interest at the annual dinner of the New York Chamber of Commerce this week was the recent victory for sound money in the national election. Among the addresses delivered at the dinner, the brief one of Mr. Cockran was the most notable, giving as he did his impression as to the proper course to be followed by the sound money Democrats who formed such an important factor in the result. After some general remarks, Mr. Cockran addressed himself to the consideration of the question how the fruits of the recent victory can be harvested. He declared in effect that the forces of order cannot afford to disband while the forces of disorder are still in the field, being marshaled by their defeated leader for a new assault upon credit and upon industry, and that the people cannot afford the luxury of political divisions as to the administration of the government when the existence of the government is imperiled, or afford to quarrel about systems of laws while the moral law itself remains an issue in American politics. He declared it to be the duty of all the men who contributed to win this victory to coöperate now in the harvesting of its fruits, but he added the significant statement that the men who have coöperated to elect Mr. McKinley cannot be held in coöperative support of his administration by the bestowal of offices upon any of their number, but only by the adoption of a policy which will commend itself to all of them.

The talk of a currency commission, which was heard a good deal last year, is being renewed. It may be remembered that at the last session of Congress Representative Heatwole, of Minnesota, introduced a resolution providing for a non-partisan currency commission. By its terms the President was to appoint nine citizens, eminent in trade, political economy and banking, to act with the Comptroller of the Currency as a commission of experts to offer recommendations for needed changes in our present inadequate banking and currency system and to report its recommendations to Congress. This resolution, it is now said, may be pressed during the coming session of Congress, and especially in view of the fact that considerable discussion has been engendered as to currency legislation in the next Congress. It is known that the Banking and Currency Committee of the House, to whom the Heatwole resolution was referred, was not favorably impressed with it, because the committee believed itself competent to evolve a satisfactory currency scheme. As nothing was accomplished in the last session, it is now possible that a currency commission may be looked upon with favor, especially as the prospect of definite financial legislation is somewhat remote. It might as well be understood, however, that the commission should start with the assumption that there is to be no further compromise on the question of a monetary standard.

The pool of steel billet manufacturers which met in New York city last week accomplished the purpose for which it convened, and adjourned without publishing a full report of its proceedings. It appears that some manufacturers of steel have been antagonized, and the horizon is not entirely clear. In fact, the outcome is for industrial war. A representative of one of the companies antagonized by or which antagonized the steel pool furnishes particulars to the newspapers. The steel combination was formed in New York city last April by representatives of the companies signing a written agreement and electing officers. The agreement bound the subscribers to produce, each, its own percentage of the total output of steel, and it is declared that the Illinois Steel and the Carnegie Company, each, were to produce 25 per cent. of the total output of steel in the country. In case any company produced less than the share allotted it, the pool was to pay it $2 per ton for every ton of such deficiency, and if more, it was to pay to the pool $2 per ton for every ton of such excess, and each company is declared to have deposited $5,000 to form a fund from which forfeits should be paid for breaches of contract. Another feature is said to have been the division of the country into districts, for the establishment of prices schedules, Pittsburgh being made the basis, with another rate at Cleveland and another at Chicago.

The statement has been published that the new agreement of the pool "has practically driven those outsiders who have heretofore been customers of the pool," users of steel, into a combination to make their own steel, owing to the prices charged by the pool. The new agreement of the pool includes both billets, crude steel and the finished product, whereas the agreement in the preceding year dealt with crude material only. The outlook is said to be an opposition combination backed by Cleveland manufacturers, which will necessitate their putting up hearth plants. The old steel pool by the new agreement includes everything except steel rails, which are controlled by a pool of their own, and outside concerns under the new agreement will have to buy billets from works in the pool, which, they claim, owing to the price of billets, it is impossible for them to do and manufacture at a profit. Last year the allotment of production was on the basis of 3,000,000 tons of steel a year, but the new allotment is said to be on the basis of 4,800,000 tons, though just what this allotment is has not been made public. The price arranged by the pool is said to be without change from that recently quoted, on a basis of $20.25 per ton at Pittsburgh.

Washington dispatches give a forecast of the forthcoming report of the Secretary of Agriculture, which is expected to be the first of the Cabinet officers' reports to be completed. It is declared to be the belief of the Secretary that a study of the markets, including not only the range of prices, but the character and extent of the demands of the various countries upon the productions of the United States, is as necessary to the prosperity and success of the farmer as to that of the merchant, and recognizing the fact that the farmer, compared to the merchant, has practically no opportunity to make this study for himself, Secretary Morton believes that the government should do it for him. The establishment of the division of foreign markets, which is concerned with this subject, is believed by the Secretary to be probably the most important of the extensions of the work of the Department under his administration. Another subject which has much engaged the attention of the Secretary is that regarding the constitution of soils. Investigations of this subject by the Department have been the means of awakening interest in agricultural colleges all over the country. Its practical importance to the farmer can be readily understood, for upon a knowledge of the relative productivity of soils may depend his success or failure.

The investigations which have been pursued by the Department into the relative nutritive value of foods have a less immediate connection with the work of the Department proper, but must be regarded, nevertheless, as possessing a high interest. Among other subjects dealt with by the Secretary will be that of sugar production. He believes that the government has accomplished all that it should undertake in the direction of sugar-producing experiments. Dr. Wiley, the Department chemist, pursued these for a number of years, and by the diffusion process, the availability of which he demonstrated, 10 per cent. more sugar can be extracted than was possible under the old processes. Now any farmer who contemplates planting beets or sorghum for sugar mills may know whether he is likely to make a satisfactory crop on his land. Among all the members of the Cabinet no one has displayed a greater disposition to economize in the expenditures for his department or to extend the provisions of the civil service laws and regulations than Secretary Morton.

Attention is drawn by Engineer-in-Chief of the Navy Melville to the need of providing skilled officials to manage the high-power warships which are now being built. He speaks of the number of engineer officers who have been retired during the past year for physical incapacity and the steadily increasing number of such officers on the retired list as demonstrating that the physical strain to which the officers of the engineer corps are subjected is too great. In former annual reports he has given what he believes to be abundant reasons for an increase in the number of officers of the corps. As time goes on and the number of ships and their power grow, the necessity for such an increase is, he says, intensified.

MONEY HERE AND IN LONDON.

All indications since the election in connection with the money markets at New York and other financial centers of the United States support the conclusion that a period of ease in interest rates and of large supplies of funds is in prospect. The return of hoarded gold to the banks has gone on with considerable vigor ever since the morning after election, and not only has the Treasury gold reserve, which had fallen to $115,000,000 just before November 3, risen to $126,600,000, but the banks are constantly adding to the volume of specie deposited by their dealers. Last Saturday's bank statement at New York, reflecting as it did the results of the first ten days after the election, was a gratifying exhibition of this tendency, as well as of the accompanying disposition of interior institutions to increase their balances at the great financial reservoir. The average gain in cash holdings for the period in question was, in the aggregate, nearly $13,000,000, of which over $8,250,000 was in specie, and the improvement in the surplus reserve of the New York banks for the week exceeded $8,500,000, in the face of an increase of nearly $16,000,000 in their average deposits. In spite of the fact that banks as well as all other institutions had been lending freely during the present week, the return of funds, so far as is known, has been little, if anything, smaller in its volume, and it is believed that the statement for the present week will be equally favorable. The favorable character of current conditions is also indicated by the prevalent and, it may be added, increasing ease of the New York loan market. The demand for commercial paper which sprang up last week, and was referred to in the regular financial columns of BRADSTREET'S, has continued, and the larger number of buyers who appear to be coming into that market results in a decided tendency to weaken the rates at which the rather small supply of first-class paper can be placed. The amount of time money now offering seems to be growing too large for the somewhat restricted demands of Wall street. Borrowers on stock market collateral who waited before effecting permanent arrangements in lieu of the call loans on which they had been forced to carry speculative stocks, have had their confidence in the working of the market toward a lower level of rates abundantly justified. The present week has not only witnessed an increase in the amount of money offered on time and of the eagerness of lenders to find employment for it, but has also been accompanied by a decline of the rate for such arrangements for moderately long periods to 4 per cent., while it may be added that the superabundant supply of money available for call loans results in driving down the current quotations on the New York Stock Exchange for this class of business to as low as 2½ per cent.

The condition of the London money market, however, presents a marked contrast to that which prevails here. The latest cable reports, as well as the comments contained in the last numbers of the London financial journals which have come to hand, would indicate a belief that comparatively high rates are likely to prevail there for some time to come. It is, indeed, the opinion that, while the London open market and the Bank of England must endure considerable demands from all quarters, there is at the present moment no prospect of an inflow of funds to supply the place of those drawn out. The Bank of England gold balance this week is down to £35,678,000, against £41,000,000 at the corresponding date last year. Of course, this enormous amount, supplemented by the supplies possessed by the open market, precludes the idea of any serious disturbance, while the Bank of England, it must be admitted, has succeeded in producing an advance in the market rates for money that would impose a sensible check upon the withdrawal of money from that city. The bank rate remains unchanged at 4 per cent., but discount in the open London market this week has ranged as high as 3⅞ per cent., and there is little doubt that the bank has not only used every effort to strengthen its own position, but has employed all the means at its command to strengthen the outside market. So marked has the situation become that the speculation in mining shares at London has suffered severely, and it may be added that the disappearance of the recent phenomenal ease with which money could be borrowed for speculative purposes has no doubt had a considerable share in deterring the London professional speculative element, as well as the public there, from developing a more active interest in American railroad securities.

GROSS AND NET RAILWAY EARNINGS.

Gross and net earnings returns for September and nine months of the present calendar year reflect the effects of continued trade depression, culminating in the stagnation of business preceding the presidential election. The first quarter of the year was quite favorable to railroad interests, showing, as it did, substantial gains over a year ago, due in a great measure to the heavy grain movement during the opening months of the year, and also to comparisons being made with a period in 1895 just preceding the boom of that year.

The less favorable showing made in the second quarter was explained by the depression which heavy gold exports and an unfavorable Treasury situation exercised upon the country's transportation interests in common with all other branches of business. It remained, however, for the third quarter of the year, with the exciting presidential canvass, to cap the climax of unfavorable features and still further add to depressing influences. It is a comforting reflection that in the face of all this a representative exhibit of all leading railroad systems publishing gross and net returns still shows gains over earnings in the preceding year.

The total gross earnings of 136 railroads, aggregating 65 per cent. of the entire railroad earning capacity of the country, amount to $576,982,922 for nine months, an increase over the corresponding period in 1895 of 1.6 per cent. This, it should be remembered, follows a gain in nine months of 1895 over 1894 of over 5 per cent. As showing the cumulative effect of this year's depression, it may be recalled that the increase shown at the end of six months, over a year ago, was a trifle over 4 per cent., while the increase at the end of the first three months of the year was 7 per cent. In view of this steady decrease in the margin of gain over a year ago, it does not look unreasonable to expect that the slight gain reported at the end of the nine months' period will have practically disappeared by the end of October. As shown in another column, the September totals of gross and net earnings fell behind those of a year ago by 2 per cent. in the case of gross earnings, and by a little over one-half of 1 per cent. in the case of net. That October will make a less favorable report than that of September seems certain. Net earnings make a less favorable showing than do those of gross, the total aggregate for nine months being $176,104,827, a gain over 1895 of three-tenths of 1 per cent., against a gain in gross of 1.6 per cent., and following a gain in 1895 over 1894 in net of 7.9 per cent.

The following table illustrates the tendencies of earnings in the various groups of roads during the three quarters of the present year as compared with the nine and twelve months' periods of the year 1895:

GROSS EARNINGS.

	Nine months, 1895.	*Year* 1895.	*Three months,* 1896.	*Six months,* 1896.	*Nine months,* 1896.

The best showing by any group of roads is that by the grangers, with an increase for nine months of 7 per cent., followed by the southern roads with a gain of 6 per cent. The steadily decreasing margin of gain over a year ago is best illustrated by the fact that at the end of six months granger earnings exceeded those of a year ago by 12.5 per cent., and at the end of three months by nearly 18 per cent. The net earnings of the granger railroads, however, gained only 2 per cent. over a year ago, and the southern railroads gained in net only 5.7 per cent. The southwestern roads, which gained only 2 per cent. in gross, increased over 23 per cent. in net earnings, this being due, of course, to the exceptionally large increase by Atchison. The central western roads, which gained less than 1 per cent. in gross, fell off nearly 8 per cent. in net, while the trunk lines, which showed a decrease of seven-tenths of 1 per cent. in gross, fell off 1.7 per cent. in net. The eastern roads gained one-tenth of 1 per cent. in gross, but showed a loss of 6 per cent. in net. The coal roads, which furnish an exceptionally full return for the nine months' period, show a falling off of 2 per cent. in gross, but decreased more than three times that amount in net. The Pacific roads gained 1.9 per cent. in gross, but increased net earnings by 4.2 per cent. One of the best exhibits is that by the Mexican roads, 11 per cent. increase in gross and 4.4 per cent. in net.

The following large increases and decreases in gross and net earnings are to be noted for the nine months' period:

INCREASES IN GROSS EARNINGS.

Canadian Pacific	$2,074,000
Chicago, Milwaukee & St. Paul	1,988,000
Norfolk & Western	1,399,000
Illinois Central	854,000
Chicago, Burlington & Quincy	762,000
Grand Trunk	725,000
Minneapolis, St. Paul & Sault Ste. Marie	700,000
Atchison	685,000
Erie	582,000
Mexican Central	539,000
Chesapeake & Ohio	516,000
Louisville & Nashville	511,000
Mexican National	510,000
Union Pacific	491,000
New York Central	476,000
Burlington, Cedar Rapids & Northern	276,000
Mexican International	260,000
New York, New Haven & Hartford	264,000
Georgia & Alabama	252,000
Nashville, Chattanooga & St. Louis	245,000
Southern	211,000
Georgia	203,000
Total	$14,553,000

DECREASES IN GROSS EARNINGS.

Southern Pacific	$1,322,000
Pennsylvania (west of Pittsburgh)	1,184,000
Pennsylvania (east of Pittsburgh)	785,000
Cleveland, Cincinnati, Chicago & St. Louis	653,000
Philadelphia & Reading	631,000
New York, Chicago & St. Louis	385,000
Delaware, Lackawanna & Western (leased)	289,000
Central of New Jersey	286,000
Boston & Maine	281,000
Houston & Texas Central	236,000
Baltimore, Ohio & Southwestern	230,000
Total	$6,282,000

INCREASES IN NET EARNINGS.

Atchison	$2,333,000
Canadian Pacific	893,000
Erie	705,000
New York Central	675,000
Minneapolis, St. Paul and Sault Ste. Marie	482,000
Central of Georgia	379,000
Atlantic & Pacific	329,000
Chicago, Burlington & Quincy	281,000
Mexican National	269,000
Grand Trunk	230,000
Southern	191,000
Union Pacific	188,000
Norfolk & Western	180,000
Chesapeake & Ohio	181,000
Buffalo, Rochester & Pittsburgh	167,000
Georgia	156,000
Georgia & Alabama	151,000
Western New York & Pennsylvania	144,000
St. Louis & San Francisco	116,000
Total	$8,050,000

DECREASES IN NET EARNINGS.

Pennsylvania (east of Pittsburgh)	$1,002,000
Pennsylvania (west of Pittsburgh)	908,000
Philadelphia & Reading	454,000
Delaware, Lackawanna & Western (leased)	408,000
Central of New Jersey	396,000
Boston & Albany	395,000
Illinois Central	396,000
Baltimore, Ohio & Southwestern	363,000
Chicago, Milwaukee & St. Paul	281,000
Cleveland, Cincinnati, Chicago & St. Louis	279,000
Houston & Texas Central	245,000
Northern Central	231,000
New York, New Haven & Hartford	209,000
Wisconsin Central	195,000
New York, Chicago & St. Louis	169,000
Cincinnati, New Orleans & Texas Pacific	149,000
Mexican Central	142,000
Boston & Maine	133,000
Savannah, Florida & Western	129,000
Southern Pacific	113,000
Louisville & Nashville	112,000
Allegheny Valley	100,000
Total	$6,803,000

The heaviest gain in gross is that of the Canadian Pacific, closely followed by St. Paul, and at a slightly greater distance by Norfolk & Western. The heaviest decrease in gross is that of Southern Pacific, followed by the Pennsylvania system east and west of Pittsburgh. Aggregates of large gains in gross earnings, it will be seen, materially exceed the larger decreases shown. Among large gains in net the Atchison stands almost unrivaled, with an increase of more than $2,300,000, on an increase in gross of over $685,000. The Pennsylvania system east and west of Pittsburgh reports the largest decreases in net.

FOREIGN TRADE STATISTICS FOR TEN MONTHS.

The feature of the preliminary foreign trade statistics for the month of October and the ten months ending therewith, is the great excess of exports over imports. The exports for October were valued at $113,385,497, which represents an increase of nearly $26,300,000 as compared with the corresponding month of last year. The imports for the month were valued at $50,373,675, which represents a decrease of over $24,700,000, as compared with October, 1895. In October, 1895, the duty-free imports slightly exceeded the dutiable imports in value, but last month the dutiable imports exceeded those free of duty in value by over $2,300,000. The excess of exports over imports amounted to $63,011,822, as compared with an excess of $12,010,628 in October, 1895.

For the ten months ending with October the exports were valued at $779,447,387, which represents an increase of over $134,400,000 as compared with the corresponding period of 1895. The imports were valued at $572,461,905, which represents a decrease of $103,600,000 as compared with the corresponding period of 1895. The dutiable imports exceeded those free of duty by nearly $48,000,000, whereas last year, for the same period, the excess was a little over $30,500,000. For the ten months' period in 1895 the imports exceeded the exports in value by $13,105,045, while for the ten months' period just ended the exports exceeded the imports in value by $206,985,482.

The statistics as to the movement of gold disclose a reversal of the conditions obtaining last year. There was an excess of imports of gold coin and bullion for the month amounting to $27,618,770, as compared with an excess of exports amounting to $76,857 in October, 1895. For the ten months ending with October there was an excess of imports amounting to $36,937,205, as compared with an excess of exports amounting to $44,427,200 in ten months of 1895. The statistics of the movement of gold ore show a constant excess of imports both for the month and the ten months in both years. Silver coin and bullion exports showed an excess over the imports both for the month and the ten months' periods in both years, the excess in October, 1896, amounting to $3,905,917, as compared with $3,202,616 in October, 1895, and the excess for the ten months amounting to $41,892,321, as compared with $33,886,562 in ten months of 1895. The movement of silver ore, on the other hand, shows an excess of imports, the excess for the month amounting to $1,272,007, as compared with $1,079,155 in October, 1895, and the excess for the ten months amounting to $13,948,750, as compared with $10,107,653 in ten months of 1895. Summing up the statistics just reviewed, it may be said that they show a heavy balance of trade in favor of the United States, a reversal of the movement of gold coin and bullion, showing a heavy excess of imports over exports of that metal, and a heavy excess of exports of silver coin and bullion over the imports of that metal. The movement of both gold and silver ores, on the other hand, shows an excess of imports over exports.

THE SEABOARD DEAL FALLS THROUGH.

Among the financial items of the week the failure of the contemplated transfer of the Seaboard Air Line system of roads to a syndicate of New York capitalists was among the most interesting. The matter had been referred to at length in these columns some weeks ago, and the severe war of rates between the Seaboard and the Southern Railway has been sufficiently dwelt upon. As the syndicate, which was formed for the purchase, and in which Messrs. Thomas F. Ryan and Samuel Thomas, of New York, were the representative heads, was understood to include interests closely identified with the Southern Railway, it was believed that the transfer would have important and far-reaching effects in bringing about harmony and peace in the relations of the railways throughout the southern states, which, indeed, had been severely threatened by the aggressive policy of the old Seaboard management. The fact that the deal has fallen through has, therefore, considerable significance. It would certainly tend to enhance the difficulty of maintaining rates in the south. The Seaboard system extends from Norfolk to Atlanta, with numerous branches through the Carolinas, and has shown its ability through its connections to disturb all rates south of the Potomac and Ohio and east of the Mississippi. In fact, so vital is its position to the rate situation in that region that reports have been current to the effect that the Louisville & Nashville was not unlikely to enter the field as a bidder for the system in case it did not fall into the possession of the Southern Railway people. This, however, cannot be confirmed, and it remains to be seen whether, in the turn events have actually taken, the Louisville & Nashville will actually take a hand in the ultimate disposal of the Seaboard roads.

It must, however, be recognized that local sentiment in the sections traversed by the Seaboard system, as well as at Baltimore, at which city not only is the bulk of the stock held, but which has a more direct interest in the road as an avenue to the trade centers of the south, has been averse to the whole sale, and there are accordingly manifestations in that section of considerable satisfaction that the proposed transaction has not been carried out. The Baltimore *Manufacturers' Record* apparently voices a general sentiment there on the subject when it says that the failure of the deal is a matter on which the south is to be congratulated, as the Seaboard had given the south much needed competition, and adds that another cause for approval by the public of the result is furnished by the certainty that the purchase of the Seaboard by a competing interest might have had an unfavorable political effect, and led to legislation in some of the southern states of a kind dangerous to railroad interests generally.

The developments which have ended in the defeat of the purchasing syndicate culminated on last Tuesday. Up to that time it was supposed that the stock they had secured in the open market, coupled with the pooled holdings which would be transferred to them by the trustees, would give a controlling interest to Mr. Ryan and his constituents. The deal was to have been closed last Saturday, but there was a postponement till Tuesday, and it was then announced that the assents of a majority of the pool holders to the sale of the pool stock (comprising some 6,000 shares) had not been obtained. It was furthermore stated that the syndicate might resort to legal proceedings to enforce their contract for the purchase, and in some quarters a report is credited to the effect that while in the possession of the pool the stock has really been acquired by the syndicate, and that failure to transfer it is due to the opposition of the railway commissions in the southern states and the trouble which directly handing the Seaboard over to the syndicate might have created. This solution of the matter seems, however, to be far-fetched, and, for the moment, the only possible conclusion is, that the old management of the Seaboard has gained a substantial victory, and will remain in charge of the property, though whether their policy will be to continue to unsettle rates throughout the south is a question that will be looked on with attention both by the holders of southern railroad securities and the commercial interests that are affected by the cost of transportation to or from points in that portion of the country.

BRITISH VS. AMERICAN IRON AND STEEL.

The London *Iron and Steel Trades Journal* has been somewhat exercised by reports of sales of iron and steel in the United States for export to the United Kingdom, Japan, Canada, Mexico and elsewhere during the summer and autumn of 1896, but finally persuades itself that American competition in iron and steel will not amount to much after all. It asserts that the United States cannot permanently produce finished iron and steel of equal quality at so low a price as Great Britain, and that the former must therefore sell at a loss, or be beaten in the export. It says, also, that cost of living in the United States is higher than in Great Britain, and therefore the rate of wages is higher and the cost of production higher; that the only possible set-off to this would be a smaller cost of iron ore, which, it is claimed, can be effected, "because in the extreme south of the United States there are mountains of iron ore close to the sea, which ore can be put on board ships at an exceedingly low price." But this ore has not been analyzed, and "may contain a large percentage of sulphur or phosphorus, and in the second place it has to be carried more than 1,000 miles to the blast furnaces."

The paper named then proceeds to throw cold water on recent sales of American steel ingots, hoops and rails for export. For example, it says one British firm bought from two firms in America experimental lots of steel ingots of 100 tons each for hoop making, and "promised regular orders if the quality turned out satisfactory." This happened some months ago, "but not a single ton has yet been received on this side," and in the mean time freights have been more than doubled, so there is very little chance of the fulfilment of the contract. "Two or three lots of American hoops" sent to India some months ago entailed a loss upon the consignor, while other American hoops sent there, when tested, were reported unsuitable for the trade, and not so good as "common German steel."

It is estimated by English authorities on the cost of making steel rails that the last contract made by an American firm for the supply to Japan will involve a loss to the contractors of at least £1 per ton. Then there is taken into account what our English contemporary is pleased to term the chances of rejection by the Japanese Inspector-General, who is "the sole authority for the acceptance or rejection of any parcel or part thereof." In conclusion the London paper is inclined to think that "for some time to come the steel manufacturers of Europe will not have much to fear from American competition in the trade with Japan."

METROPOLITAN TRACTION CHANGES.

Street railway development throughout the country has certainly received a considerable impetus since the election. A number of important enterprises of this character which were held back by the financial depression and the utter inability of their owners to obtain capital or place bonds have assumed an active phase, and the extensions of existing trolley systems are being pressed forward with renewed vigor. There is, indeed, every prospect that the next year will witness an enormous increase in the mileage of such lines, and that the substitution of electric and cable power for horses will be almost complete.

By far the most important announcement in connection with street railway properties concerns the Metropolitan Traction Company, of New York, which corporation controls a majority of the surface line mileage in the city. Formed in 1891, this company has by lease acquired the principal lines there outside of those owned by the Third Avenue Company, the principal line being the Broadway cable road, with its extensions constructed by this company on Columbus and Lexington avenues. In addition, it controls the Belt Line (Central Park North & East River Railway), the Eighth Avenue,

the Sixth Avenue, the Forty-second Street and Grand Street Ferry line, the Twenty-third Street, and a number of minor lines, and early in the present year leased the city passenger road of the New York & Harlem Railroad Company, known as the Fourth Avenue street car line. The mileage thus consolidated under one management amounts in the aggregate to nearly 185 miles, of which only the Broadway, Columbus avenue and Lexington avenue lines are operated by a cable system—a total of 28½ miles. With the exception of the short Lenox avenue extension of less than two miles, on which an underground trolley has been in operation, the balance of its mileage still retains horse power, though the company contemplates changes to electricity, compressed air or other motors on many of them when a satisfactory system is obtained.

These leases and the ownership of the controlled lines is vested not in the traction company, but in an operating concern known as the Metropolitan Street Railway Company. The shares of the latter are all owned by the traction company, and the share capitals of both companies, it may be observed, are identical in amount, being in each case $30,000,000, though it should be noted that in the present year the shares of the street railway company were increased from $16,500,000 to its present amount, doubtless in view of the change in the position of the corporation which is now to be effected.

On Tuesday of the present week action was, however, taken looking to the retirement of the traction company's stock and the distribution to its holders of the Metropolitan Street Railway shares and certificates of indebtedness in its treasury. The reason for this, as stated by the traction company's officials, is that that organization is not an operating company, but a construction and investment organization, and that the time has come to distribute its holdings. The announcement is, therefore, that the present holders will receive for the present stock an equal number of shares of the street railway company, and, in addition thereto, the railway company's interest-bearing scrip to the amount of 20 per cent. of their holdings of stock. This latter provision is regarded as a stock dividend of 20 per cent., and represents the $6,000,000 or so of unissued stock of the traction company. It has certainly been regarded in this light in the New York and Philadelphia stock markets, where (especially at the latter city) the traction company's securities have been the object of more or less speculation, and traction stock, which, in spite of the fact that regular dividends at the rate of 5 per cent. per annum have been paid since 1894, has sold recently as low as par or under, and up to 110, has advanced to 114.

An interesting announcement in this connection concerns the Manhattan elevated system of New York city. For many months past Wall street has been regaled with reports that a consolidation or combination of some sort between the elevated and great traction corporation was contemplated. The traction company's officials now not only give denial to this by their latest action, but are quoted as saying that all rumors of such a combination were absolutely without foundation. No negotiations looking to that end had ever been had, and the subject had never even been considered by the street railway people. Furthermore, the present action of the traction company was not in any way influenced by such negotiations or the possibility of them.

It is further intimated very strongly that the traction company had no use for the elevated railroad, and did not want it. Their business was operating surface lines, and they were entirely satisfied with that branch of passenger business.

THE REPORT ON NAVIGATION.

One of the features of the annual report of the commissioner of navigation is a discussion of the interest of the United States in the carrying trade of the Pacific ocean. Commissioner Chamberlain invites attention to the fact that our maritime rank on the Pacific is now threatened by a new rival, Japan, which has just established a Transpacific steamship line to the United States, and, with the coöperation of American capital, is preparing to extend the service rapidly. In 1880 the tonnage of American vessels entering the United States from the ports of Asia and Oceanica was 283,395 tons; of foreign vessels, 442,251 tons. Fifteen years later, in 1895, American tonnage had increased but a trifle, to 308,461 tons, while the foreign tonnage had leaped to 657,206 tons. The commissioner points out that the large and profitable carrying trade once conducted between Asiatic and European ports by American vessels which seldom entered American ports, has almost entirely passed away. We have, he says, already seen the American flag almost wholly disappear from the mid-Atlantic, save as borne by the mail steamers of the American Line, and the figures show that the carrying trade of the Pacific is slipping from us. Before it is altogether lost, he urges that Congress inquire into the conditions of Transpacific transportation. Within the last five years, he continues, Japan's sea-going steel steamers have increased from thirteen of 27,701 tons to fifty-three of 106,383 tons, while the number of American steel and iron steamers on the Pacific coast is forty-three of 68,625 tons.

Commissioner Chamberlain argues in favor of the passage of a free ship bill, favors the enactment of the omnibus bills relating to navigation and to American seamen in the form favorably reported by the Senate Committee on Commerce at the last session, renews the argument for the repeal of compulsory pilotage on coastwise sailing vessels, pointing out that Congress has spent over $27,000,000 in the improvements of seventeen harbors, at which compulsory pilotage is still exacted from domestic sailing vessels, and advises an immediate extension of the act of 1892, under which the steamships New York and Paris were admitted to American registry and the steamships St. Louis and St. Paul were built in the United States. Under existing law, he says, it is impossible to establish on the Pacific a mail service even approximating our Atlantic mail service on equal conditions with those found necessary to the recent creation of the latter.

The commissioner opposes the proposition found in Senator Frye's bill, now before Congress, to impose 10 per cent. additional discriminating duties on all cargoes brought into the United States by foreign vessels. He urges that for over eighty years the United States have followed the policy of reciprocity in shipping, and declares that every other maritime nation of considerable rank has adopted and now pursues the same policy. Our total imports for 1895, he says, were valued at $731,969,965, of which $590,538,362 were brought in foreign vessels. The discriminating duty bill would, he adds, put an additional charge of $59,100,000 on our international exchanges, based on the figures for 1895, an amount approximately equal to our entire freight bills on imports and exports. The report quotes articles from our treaties with the thirty-five principal nations in the world, all of which, it is contended, must be abrogated at the expense of a disturbance of our trade relations with the world if the policy of discriminating duties is to be adopted by the United States.

In arguing against the imposition of this tax the commissioner cites the enormous importations of tea and coffee, aggregating in 1895 $125,000,000, and points out that the proposed tax would be a tax on the consumers of those articles. Of coffee from Brazil $54,000,000 came in foreign vessels, and the proposed tax would equal $5,400,000, or sufficient, Mr. Chamberlain says, in coffee alone to subsidize steamship lines, including twenty-five steamers equal to the St. Louis and St. Paul, or a much larger number of the class required for South American, Asiatic and African trade. A considerable share of the report is given to the consideration of this question, and the commissioner reaches the conclusion that the policy of discrimination always has been, and always will be, thwarted by retaliation.

LIQUOR AND PAUPERISM, CRIME AND INSANITY.

By an act passed in 1894 the Massachusetts Bureau of Statistics of Labor was directed to ascertain from all sources available facts and statistics showing the number of commitments to all institutions, penal and charitable, resulting from the use or abuse of intoxicating liquors, the number of crimes committed by persons while under the influence of intoxicating liquors, the number of crimes of every class thus committed, the number of paupers whose condition could be traced to the use or abuse of intoxicating liquors by themselves or by their parents, guardians or others; the number of persons who have been pronounced insane and whose condition could be traced to the use or abuse of intoxicating liquor by themselves, their ancestors or by others, and in general such other data as would tend to show the relation of the liquor traffic to crime, pauperism and insanity in the commonwealth.

The results of the investigation thus directed are set forth in part one of the twenty-sixth annual report of the Massachusetts bureau, just made public. It appears that of the paupers found in state institutions 65 out of every 100 were addicted to the use of liquor. The excessive drinkers numbered about 16 in every 100. Excluding minors, about 75 in every 100 were addicted to the use of liquor. Of the whole number 47.74 per cent. had one or both parents intemperate, 39.44 per cent. attributed their pauperism to their own intemperate habits, and about five in every 100 considered their pauperism due to the intemperance of their parents, one or both. Of the whole number addicted to the use of liquor about one in every 100 used wines only, about 20 in every 100 used lager beer or malt liquors only, about two in every 100 used distilled liquors only, and about 77 in every 100 used all kinds or at least two kinds of liquor. About 62 in every 100 used tobacco. Only three paupers were found who used drugs intemperately.

Of the total convictions in the commonwealth for a period of twelve months about 66 in every 100 were for drunkenness, and about two in every 100 for drunkenness in connection with other offenses. About 82 in every 100 offenders were in liquor at the time of the commission of the offense. Of the cases in which the offender was convicted of a crime other than drunkenness, about 43 in every 100 were cases in which the offenders were in liquor at the time of the commission of the offense, and about 57 in every 100 were in liquor at the time the intent to commit the offense was formed. In about 84 cases out of every 100 the intemperate habits of the offender led to a condition which induced the crime. In about 60 per cent. of the whole number of convictions the intemperate habits of persons other than the offender were said to have been influential in the commitment of the offense, and about 43 in every 100 of the total convictions for crimes other than drunkenness were of this class.

Of the whole number of persons convicted about 94 in every 100 were addicted to the use of liquor, the excessive drinkers numbering about 17 in every 100, and the total abstainers about six in every 100. Excluding minors, those addicted to the use of liquor numbered about 96 out of every 100. About 58 out of every 100 had fathers addicted to the use of intoxicating liquors, and about 20 in every 100 had mothers addicted to the use of liquor. Less than one in every 100 of the offenders addicted to liquor used wine only, about 17 in every 100 used lager beer or malt liquors only, about three in every 100 used distilled liquors only, and about 80 in every 100 used all kinds or at least two kinds of liquor. About 85 in every 100 used tobacco.

Out of the total number of insane persons found in state institutions, about 37 in every 100 were addicted to the use of liquor. Excessive drinkers numbered about 17 in every 100. Excluding minors and adults, about whom information could not be obtained, about 51 in every 100 were addicted to the use of liquor. About 34 in every 100 were known to have one or both parents intemperate. In about 21 cases out of every 100 the intemperance of the person led to his insanity. Leaving out of consideration the cases in which information was lacking, about 25 in every 100 of the remainder owed their insanity to intemperance. Only about one person in every 100 insane was considered to be insane because of the intemperance of his parents. Leaving out of consideration, however, cases in which information was lacking, about 20 out of every 100 were insane on account of the intemperance of parents. Of the whole number of insane persons addicted to liquor, about one in every 100 used wines only; about 18 in every 100 used lager beer or malt liquors only; about five in every 100 used distilled liquors only, and about 75 in every 100 used all kinds, or at least two kinds of liquor.

EXTENT AND CHARACTER OF OUR IMMIGRATION.

The immigrants into the United States during the last fiscal year aggregated 343,267, of whom 340,468 were landed, and 2,799 were debarred and deported at the expense of the various steamship lines by which they came. Of those deported, 776 were found to be under contract to perform labor in the United States made prior to their arrival, and 2,023 were returned as belonging to other prohibited classes. In

addition to the number debarred, there were 238 who became public charges within a year after their arrival, and hence were returned to the countries whence they came. The total immigration for the fiscal year was in excess of that for the two preceding fiscal years, but fell below that for every preceding year since the year 1886, when the total was about 9,000 below that for the fiscal year ending in June, 1896.

Commissioner Stump says that he knows of no immigrant landed in this country during the last year who is now a burden upon any public or private institution. With some exceptions, the report states, the physical characteristics of the year's immigration were those of a hardy, sound, laboring class, accustomed, and, apparently, able, to earn a livelihood wherever capable and industrious labor can secure employment. As to occupations, it was composed largely of the classes designated as skilled and unskilled laborers, with some professionals. The amount of money brought into the country by immigrants was at least $4,917,318, and probably was largely in excess of these figures. In the view of the commissioner the statistics accessible do not justify the conclusion that our alien population is growing in undue proportions. A comparison of the figures for the past year, 343,267, with the average annual immigration for the preceding ten fiscal years, 435,085, discloses a decrease of 91,818, or more than 21 per cent. Such data as he has been able to obtain as to the number of those who annually return to their own country, though approximate only, lead him to doubt seriously that there could be any material increase in our foreign-born population since 1893.

Of the total number of immigrants over 14 years of age that arrived during the year, 5,066 could not write and 78,130 could neither read nor write, which is 28.63 per cent. of the whole number. Of those who could neither read nor write, 31,374 came from Italy, 12,816 from Russia proper, 12,154 from Hungary, 6,107 from Bohemia and Moravia, 5,281 from other parts of Austria-Hungary, 2,473 from Ireland, 1,565 from Arabia and Syria, and 1,589 from Portugal. The report shows that of the whole number of arrivals, 212,466 were males and 130,801 females.

The only sensible conclusion to be drawn from the statistics of immigration would seem to be that while the regulations intended to restrict or prevent the landing of dependent, defective and criminal immigrants should be made as stringent as possible, there is no ground for the exclusion of immigrants as immigrants. It is worth while noting in this connection that the portions of the country in which there is a large infusion of the foreign element cast a large vote for sound money at the late election, while in no part of the country was the cause of unsound finance more strongly supported than in states where the so-called native American element predominated.

OUR TRADE WITH SWEDEN.

The interest taken in the outlook for American products in the Baltic countries, notably since the report on that subject by the Danish consul, Mr. Currie, of Louisville, lends importance to a pamphlet published recently by the State Department at Washington on Sweden's place among the world's markets for our products.

According to the official statistics published by the Board of Trade of Sweden, the value of the foreign commerce of the kingdom in 1894, the latest year for which final figures are available, was $173,604,188. Of this amount 53.9 per cent., or $93,572,625, consisted of import trade, and 46.1 per cent., or $80,031,563, of export trade. The value of Sweden's trade with foreign countries, exclusive of specie, from 1885 to 1894, inclusive, is shown in the following table:

	Imports.	*Exports.*	*Total imports and exports.*
1885	$90,580,056	$65,968,583	$156,548,639
1886	80,395,905	61,164,507	141,560,412
1887	78,657,563	66,080,127	144,739,690
1888	86,790,536	75,475,156	162,271,692
1889	100,925,947	80,826,414	181,752,361
1890	100,913,974	81,596,115	182,510,289
1891	98,830,838	86,644,958	185,475,796
1892	96,647,767	88,194,526	184,602,293
1893	89,056,535	87,976,807	177,033,342
1894	93,572,625	80,031,563	173,604,188
Annual average for the ten years	$91,613,975	$77,395,896	$169,009,870

Although the value of Sweden's foreign trade as returned for 1894 was slightly less than that recorded for the five years immediately preceding, it shows a considerable increase when compared with the values for the years prior to 1889. The ten-year period ending with 1894 witnessed a gain amounting to 10.9 per cent. This gain occurred chiefly in the case of the export trade, which was 21.3 per cent. greater in 1894 than in 1885. The imports increased only 3.3 per cent. during the decade.

The relative importance of the various classes of merchandise which constitute Sweden's import trade is shown by the following statement, covering the years 1892, 1893 and 1894:

VALUES OF CLASSES OF MERCHANDISE IMPORTED.

	1892.	1893.	1894.
Live animals	$188,284	$158,379	$215,717
Animal food stuffs	4,905,085	4,092,046	4,134,625
Cereals and cereal products	10,229,057	9,190,191	10,626,934
Groceries	13,000,840	13,505,275	12,591,634
Fruits and vegetables	1,306,285	1,281,886	1,435,062

Hair, feathers, hides, skins, bone, horn, and other animal substances	5,125,367	4,521,774	4,278,714
Mfrs of hair, feathers, hides, skins, bone, horn, etc	773,749	648,479	739,478
Tallow, oils, tar, gums, and similar substances	4,422,648	4,351,818	4,613,664
Manufactures of tallow, oils, tar, gum, etc	632,685	636,391	660,513
Wood, unmanfrd, sawed or hewn	471,768	554,949	720,823
Manufactures of wood	703,677	607,569	589,580
Dyes and dyestuffs	1,000,202	1,197,928	1,280,881
Vegetable substances, not elsewhere specified	2,806,015	2,802,309	2,568,507
Paper and manufactures of paper	1,740,952	1,191,950	964,403
Other manufactures of vegetable substances	141,181	212,001	310,595
Minerals, crude	10,016,198	9,733,418	11,935,586
Minerals, wrought, other than metals	926,386	839,576	986,938
Metals, unwrought or partly wrought	2,266,592	2,069,151	3,130,014
Manufactures of metal	878,742	5,088,055	4,525,707
Ships and boats, carriages, machines, instr'm'nts and clocks	5,184,893	3,566,074	4,694,527
Coin	156,882	104,194	541,740
Articles not included in the above classes	1,143,792	1,117,762	1,243,708
Totals	$96,564,649	$89,160,729	$94,114,365

It will be seen that cereals and their products, groceries, textile fabrics and crude minerals constitute the most important classes of merchandise imported into Sweden. In 1894 these four groups of commodities amounted in value to about 50 per cent. of the total importation. Groceries constituted 13.38 per cent. of all imports, crude minerals 12.68 per cent., textile fabrics 11.68 per cent., and cereals 11.29 per cent. Other important groups of merchandise, with the percentage each one formed of the total imports in 1894, are as follows: Raw textile materials, 6 per cent.; ships and boats, carriages, machines, instruments and clocks, 5 per cent.; tallow, oils, tar, gums, and similar substances, 4.9 per cent.; manufactures of metals, 4.8 per cent.; hair, feathers, hides, skins, bone, horn, and other animal substances, 4.5 per cent., and animal food stuffs, 4.4 per cent.

Of the imported commodities comprised under the head of groceries, coffee is the principal item, constituting in value more than half of the entire group. Raw tobacco, sugar, syrup and molasses, and rice grits and rice meal are also important articles in this class. In the group of crude minerals, coal is the chief item. Coal also ranks as the most important single article among all the imports, having a value in 1894 amounting to $8,737,031. Other items of importance in this group of imports are soda, potash, salt and coke. Among the textile fabrics imported woolen tissues stand first in value. Cotton goods come next, followed by silk fabrics and fabrics of flax, hemp and jute. In the cereal group, wheat, rye and wheat flour, in the order named, rank as the three leading items. Barley, maize, rye flour and bran are imported in smaller quantities. Cotton and wool constitute the principal part of the imports of raw textile materials. Flax, hemp and jute are imported, but not very extensively. Shoddy forms an item of some importance in this group. In the class of imports comprising ships and boats, carrriages, machines, instruments and clocks, the item of machines, implements and tools is the important one, constituting in value more than 50 per cent. of the entire group. Instruments of various kinds and clocks and watches are the articles of next importance. In the group consisting of tallow, oils, tar, gums and similar substances, the item of chief importance is that comprising the various kinds of oils. Tar, gums and resins, and also tallow, are imported to some extent, but the value of these items combined is much less than that of the oils. Of the various kinds of animal substances comprised in the group of merchandise consisting of hair, feathers, hides, skins, bone, horn, etc., the items of chief value are hides and skins and fertilizers. The imports of hair and feathers and bone, horn, etc., are not very large. In the group designated as animal food stuffs, fish and pork are the chief articles of importation. The only other items of importance in this group are butter and conserves.

The relative importance of the various classes of merchandise which constituted Sweden's export trade in the years 1892, 1893 and 1894 is shown in the following tabular statement:

VALUES OF CLASSES OF MERCHANDISE EXPORTED.

	1892.	1893.	1894.
Live animals	$1,307,879	$906,854	$1,097,031
Animal food stuffs	18,069,935	15,375,103	15,177,622
Cereals and cereal products	3,214,214	5,995,706	3,604,612
Groceries	487,642	250,890	255,040
Fruits and vegetables	164,720	208,229	62,720
Spirituous and other liquors	76,194	39,383	37,640
Raw textile materials	26,637	25,618	41,478
Yarn, thread, cordage, etc.	287,197	271,070	272,992
Textile fabrics	2,588,390	2,225,234	1,563,755
Hair, feathers, hides, skins, bone, horn, and other animal substances	594,486	720,356	747,103
Mfrs of hair, feathers, hides, skins, bone, horn, etc	139,886	162,743	188,571
Tallow, oils, tar, gums, and similar substances	468,785	392,228	462,374
Manufactures of tallow, oils, tar, gums, etc	192,062	265,589	181,061
Wood, unmanfrd, sawed or hewn	29,291,030	30,399,481	31,345,701
Manufactures of wood	6,519,494	6,176,681	5,754,326
Dyes and dyestuffs	88,462	96,224	72,816
Vegetable substances, not elsewhere specified	204,400	166,695	132,745
Paper and manufactures of paper	8,151,720	7,748,094	2,051,978
Other manufactures of vegetable substances	69,535	97,822	130,186
Minerals, crude	2,151,925	2,992,404	2,725,710
Minerals, wrought, other than metals	2,166,796	2,583,217	3,002,469
Metals, unwrought or partly wrought	8,879,806	7,823,092	7,145,477
Manufactures of metal	1,076,988	998,871	1,383,305
Ships and boats, carriages, machines, instr'm'nts and clocks	1,138,298	1,348,954	1,794,411
Coin	57,915	----	----
Articles not included in the above classes	838,045	706,268	800,440
Totals	$88,252,441	$87,976,806	$80,031,563

The most important group of merchandise among exports is wood, unmanufactured, sawed or hewn. In 1894 this group comprised in value 39 per cent. of the total exports. The accompanying group, entitled manufactures of wood, comprised 7 per cent. Wood, therefore, in its various forms, manufactured and unmanufactured, constituted nearly one-half of Sweden's export trade. After wood, the animal food stuffs form the most important groups of commodities exported, comprising, in 1894, 18.9 per cent. of all the exports. Another group of considerable importance is that consisting of metals unwrought or partly wrought. The portion this group formed of the total exports in 1894 was 8.9 per cent. Of the remaining groups of exported merchandise, those which in 1894 reached a value exceeding $1,000,000, with the percentage each group constituted of the total export trade, were as follows: Cereals and cereal products, 4.5 per cent.; minerals, wrought, other than metals, 3.7 per cent.; minerals, crude, 3.4 per cent.; paper and manufactures of paper, 2.5 per cent.; ships and boats, carriages, machines, instruments and clocks, 2.2 per cent.; textile fabrics, 1.9 per cent.; manufactures of metal, 1.7 per cent., and live animals 1.3 per cent.

The relative standing of the various countries contributing to the direct import trade of Sweden in the years 1892, 1893 and 1894 is shown in the following table:

Imptd. into Sweden from	*Values* 1892.	1893.	1894.
Germany	$31,047,800	$30,256,400	$32,095,400
Great Britain and Ireland	25,520,000	23,135,100	26,205,600
Denmark	11,758,200	10,664,600	10,692,800
Norway	9,465,500	8,425,700	7,227,300
Russia	3,030,000	3,406,800	3,931,000
United States	3,439,500	2,907,800	3,084,100
Belgium	3,261,300	3,054,900	2,621,600
Netherlands	2,470,200	1,876,500	2,322,500
France	2,565,600	1,674,200	2,282,000
Finland	1,132,600	1,150,000	1,416,700
Other countries	2,874,000	2,578,700	2,242,400
Totals	$96,564,700	$89,160,700	$94,114,400

The tabular statement following shows in detail the quantities and values of the various articles of merchandise which, according to the Swedish returns of direct trade, were imported into Sweden from the United States during the years 1892, 1893 and 1894:

VALUES OP MERCHANDISE IMPORTED INTO SWEDEN DIRECTLY FROM THE UNITED STATES IN 1892, 1893 AND 1894.

Imported into Sweden from the United States.	*Value* 1892.	1893.	1894.
Cotton, uncolored	$1,304,429	$776,515	$1,359,118
Ships and boats	3,484	----	----

Other articles	107	2,884	9,822
Totals	$3,439,450	$2,907,751	$3,084,288

The leading articles of merchandise imported from the United States in Sweden's direct trade with this country during the years 1892, 1893 and 1894, according to the Swedish commerce reports, were cotton, mineral oils, wheat and fertilizers. Other important commodities imported were pork, wheat flour, sugar and molasses, rosin, hides and skins, vegetable oils, maize, rye, raw tobacco and machinery.

FLUCTUATIONS IN LONDON STOCKS.

Our own railroad and industrial share market without doubt shows the widest fluctuations in values within a series of recent years that were ever exhibited. This is due not only to the speculation of which Wall street has been the scene and for which the securities of such corporations supplied the material, but to the successive appearances of unfavorable conditions involving the frequent bankruptcy and reorganization of our

railroad corporations. The trunk lines of the country furnish as good an example of this as any other class of roads. There are six of these organizations, the New York Central, Pennsylvania, Erie, Baltimore & Ohio, Grand Trunk, Lehigh Valley, and to them may also be added the Chesapeake & Ohio and Norfolk & Western roads. The Pennsylvania, New York Central, Grand Trunk and Lehigh are the only members of the group that have not undergone the reorganization, and the last two of these four have been in grave complications, while of the remaining four the Erie has twice experienced the throes of a reorganization, and two of the number, the Baltimore & Ohio and the Norfolk & Western, are at present in the hands of receivers. Here then is ample reason for the wide fluctuations which have caused Baltimore & Ohio common to sell within recent years at figures so widely apart as 100 and 12½, and Erie common at 39 and 7½. Indeed, taking our railroads as a whole, the company that has not passed through the fires of bankruptcy, receivership and reorganization is the exception.

Nevertheless, criticism of the American railroad market need not involve the assumption that we are singular in this respect. The ups and downs of the London quotation list, though perhaps less erratic, have been almost equally striking. The *Daily Financial News* of that city, in a recent number, directs attention to the fluctuations of ten years past in the London Stock Exchange, and gives a tabulation of the extreme variations in the prices of some of the leading securities which are the vehicles of investment and speculation there. It takes, in the first place, the class of British railway stocks which, under the title of "home rails," are just now prime favorites in the English market. The highest and lowest prices within that period for twelve of the most active stocks of that class, with the year in which the extremes were reached in each case, are tabulated in the following form:

Company.	*Highest.*	*Year.*	*Lowest.*	*Year.*
Barry	293½	1896	124	1880
Caledonian	166	1896	93½	1887
Great Eastern	197⅛	1891	62½	1886
Great Western	187	1896	126½	1886
Lancashire & Yorkshire	136⅞	1895	99¼	1886
Brighton "A"	185¾	1896	92¾	1886
L. & Southwestern	217	1896	118¼	1886
Man., Shef & Lin	96	1890	43	1896
Midland	174⅛	1896	121⅝	188-
North British Ord	74¾	1890	30	1893
Northeastern Cons	184⅞	1896	142⅛	1886
Southeastern "A"	117	1889	65¾	1894

It may be added, as the journal which presents these comparisons does, that with three exceptions the highest prices have occurred at later dates than the lowest, a circumstance which it calls "prima facie evidence of progress in the majority of cases;" and it may be further noted that in six out of the twelve instances the best figures are credited to the present year. This, however, may be regarded as the effect of the plethora of funds seeking investment and the willingness of the British public to accept a small income return upon their money, combined with the feeling that it is placed in a corporation at home. This latter tendency, it may be observed, is probably the reaction caused by the ill results to capital invested in distant countries like Argentina, or, it must be confessed, by the distrust in American stocks that our currency complications have aroused.

The paper from which these figures are taken also proceeds to examine the fluctuations in a number of classes of securities within the last ten years. Consols, for instance, were as low as 90⅜ in 1890, and have this year sold at as high as 113⅞. The same width of fluctuations is shown in the securities of British municipalities. The city of Edinburgh water works 6 per cent. loan have sold at 164 and at 219, while Manchester 4 per cents. have recorded quotations within the period under consideration of 115 and 158. Argentines have naturally suffered severely. The Argentine loan of 1886–87, for instance, fell from 100¾ to 52½, East Argentine Railway from 117½ to 26, Buenos Ayres Great Southern from 220 to 90 and Central Uruguay from 190 to 55¼. Attention is also directed to Egyptian unified bonds, which sold at 63⅛ in 1886 and this year brought no less than 105⅜.

The conversion of breweries and industrial enterprises into public companies with more or less speculative securities has been a feature of the British financial situation, as it has in our own. Alsop's Brewery ordinary shares, for instance, started in 1887 at 180, and fell to 12½ in 1892, but have since recovered to 187, while Guinness ordinaries, beginning in 1866 at 181½, have this year touched 604. The newspaper which supplies these figures does not go into an examination of mining securities of the South African and Westralian species, though they, it is well known, would supply instances of fluctuations that would put the most notable "wild cats" of our own market to the blush.

RUSSIA'S CURRENCY REFORM.

European financial markets continue to be very sensitive to every indication of the Russian government's intentions in connection with the proposed change of its currency to a gold basis. Since the project was first mooted there have been many contradictory reports concerning it, and in this as in other matters the course of the Czar's advisers has been shrouded in more or less mystery. It has, however, been apparent for many months past that Russia has been acquiring gold at every opportune moment. No small portion of the specie that was taken from this country in the earlier portion of the present year is understood to have gone to St. Petersburg, and the Russian government is credited with having rendered the operations feasible by the allowance of a commission to the Berlin bankers who were charged with the business of obtaining the gold. The Russian Treasury, it is well known, has been from time to time a purchaser of specie in the London open market, and there is room for the conclusion that the extraordinary efforts now being made by the Bank of England to maintain the London money market on a high level is due more to the expectation that the colossus of the north will make further endeavors to strengthen its gold holdings against the proposed conversion scheme than to fears of any outflow of British capital to this country in consequence of the revival of confidence in our credit and financial stability.

The correspondent of the London *Times* at Berlin has, however, lately furnished some interesting and rather explicit details as to the immediate intentions of the Russian government in this connection. It takes the form of a communication from St. Petersburg to the correspondent in Berlin, the most important statement being that the scheme of currency reform has been postponed "for the present." The previous understanding had been that M. de Witte, the Imperial Finance Minister, would lay the whole matter in complete form before the Council of State some time during the autumn, but the *Times*' informant says the postponement of this action is attributed to the direct influence of the Emperor himself.

It indeed seems that the proposals of the government have not been accepted with any unanimity by the Russian public. Discussion of the matter has been permitted in the press. Its opponents call it a process of depreciation and devaluation of the currency, and advance the argument that its adoption will certainly be followed by an outflow of the gold from the country, which is rendered more probable by the large increase in the Russian external debt, interest on which has to be paid abroad in gold. In the course of the past ten years the debt has increased no less than 1,500,000,000 rubles, while during the same period a deficit in the budgets for each year has been averted, so it is alleged, solely by the ingenious expedient of changing many items of expenditure to the extraordinary revenue derived from foreign borrowings. It is noted that two years ago an imperial order was made directing that many such items theretofore classed as extraordinary should be placed in the ordinary side of the budget, and that, had this regulation been in force, there is little doubt that each year down to 1895 would have shown a deficit in the accounts.

Stated in brief form, M. de Witte's plan is to introduce a new gold currency corresponding exactly with the present value of the silver ruble and its paper equivalent. This has been begun by the compulsory circulation of the silver ruble at par with its paper equivalent, and of the old gold pieces at a fixed premium of 50 per cent. Besides, Treasury notes representing new gold rubles have been put in circulation, the proposition being that the new coin will be smaller and made to correspond in weight with the value of the silver and paper rubles, while all small denominations of paper money will be withdrawn from circulation. It is stated by the *Times* correspondent that the arrangements thus far effected are regarded with favor, inasmuch as the excessive variations of the paper currency values which formerly prevailed have been done away with. On the other hand, a conservative people like the Russians have not viewed the introduction of such a novelty as metallic money with complete acquiescence, and in one instance—the circulation of the new Treasury gold notes—merchants had to be compelled to accept them by threats of retaliation by the state bank.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

In discussing the prospects for the establishment of an international patent law by Japan, the London *Implement Dealer and Colonial Importer* expresses the hope that when the Japanese authorities act in the matter they will not take English patent laws as a model. "Let them rather go," it says, "to the United States, where the validity of a patent is guaranteed when letters patent are issued." In England recently a few people expended $80,000 over a patent "which has now been proved invalid." The English patent office "will sell the same thing half a dozen times over to different people and the public have to take the risk," which may be appreciated when it is known "there are in existence in and out of the United Kingdom 1,544,000 old and new patents liable to upset any new patent." In the American patent office, as our English contemporary expresses it, "about 300 skilled experts" examine applications for patents, aided by a well indexed library, the like of which does not exist in England, and "the cost of obtaining patents in America is chaper than in the United Kingdom."

CURRENT BUSINESS NEWS.

Industrial.

Among the railroad companies which have placed orders for locomotives with the Schenectady Locomotive Works, of Schenectady, N. Y., are the Northern Pacific, Michigan Central, Lake Shore, Delaware & Ulster and Portland & Mumford Falls.

The Peninsular Car Works, of Detroit, Mich., have shut down indefinitely, and 1,500 men are out of employment. The works were reopened six weeks ago with a force of 1,500 men working day and night.

Another shop of the S. H. Howe Shoe Company, at Marlboro, Mass., is to be reopened after a year's shut-down. The shop employs from 250 to 300 hands.

The Illinois Watch Company, at Springfield, Ill., has resumed operations.

The Edgar Thomson Steel Works, at Braddock, Pa., is turning out two orders, received since the election, from the Far East. China has given the Carnegie Company one order for 8,000 tons of steel rails. They will be shipped to Baltimore, to go by steamer. The light grade rail plant of the Edgar Thomson Works has started on an order for 5,000 tons of T rails for Japan.

From the elaborate statistics of strikes in the United States between the years 1886 and 1894 inclusive, issued by the commissioner of labor, it appears that of 46,862 strikes (counting the number of establishments affected), 20,397 succeeded, 4,775 succeeded partly, and 21,686 failed. Of the 1,326 classified under the head of transportation, 335 succeeded, 206 succeeded partly, and 785 failed.

It is reported that the Tennessee Coal & Iron Company have orders for pig iron on hand for future delivery amounting to over 250,000 tons.

The Shaw Electric Crane Company, of Muskegon, Mich., has completed four large cranes for the Mariopol-Nicopol Mining and Metallurgical Company of Russia and will ship them as soon as the directions are received.

The strike of the employees of the Tudor Iron Works, at St. Louis, which has been in progress for two years, was declared off on Saturday, the proprietors having acceded to the demand for increased wages. This will place 800 men at work.

In October last Sanford & Sons, carpet manufacturers, of Amsterdam, N. Y., reduced the wages of their employees 10 per cent. On Saturday the firm announced that the wages had been restored.

A Houghton, Mich., dispatch says the mining companies at Negaunee, Iron Mountain, Champion, Ishpeming and other points in that region are adding to their force of men to the extent of 2,000 men or more.

It is announced that one-half the force of the tapestry mills of the Alexander Smith's Sons Carpet Company, Yonkers, N. Y., would be laid off this week, and the remainder on Wednesday of next week. It was also announced that probably the other mills of the company would do likewise within the next two weeks. If this occurs about 7,000 hands will be affected.

The Buell woolen mill, of St. Joseph, Mo., has resumed operations. This is one of the largest woolen mills in the west.

The cotton mill of the Columbian Manufacturing Company, at High Bridge, N. H., which has been shut down since April 16, started up on full time, thereby giving employment to 150 operators.

Lumbermen of Seattle say that, as a result of the recent flood, 90 per cent. of the shingle bolts cut in northwestern Washington were swept down the various rivers and out to sea, and that from 3,000,000 to 5,000,000 feet of logs were driven through the booms and lost.

The Indiana State Miners' Convention has voted to continue the strike for 60 cents a ton. An effort will be made to get the Illinois miners to unite with those in Indiana in securing a uniform mining price in the two states.

Commercial.

The larger bicycle makers are sending men on the road with samples of next season's wheels. Most of them have been out but a short time, "yet they report a healthful feeling among the men who retail wheels, which they think augurs well for next season's trade."

Financial.

The eleventh annual session of the National Fraternal Congress of Secret Insurance Societies began in Louisville, Ky., this week with about 150 delegates in attendance. The body represents a membership of nearly 2,000,000, with insurance of nearly $4,000,000,000.

Dividends have been declared by the following corporations: Pacific Mail Steamship Company, 1 per cent., payable December 1; Ontario Silver Mining, 10 cents per share, payable November 30; Chicago Brewing & Malting, semi-annual 4 per cent. on the preferred stock, payable December 1.

The sound money press says the speeches of Bourke Cockran and Senator Hawley at the New York Chamber of Commerce dinner show that there ought to be no real difficulty in Republicans and Sound Money Democrats agreeing upon an equitable revenue bill. "Mr. Cockran is a free trader, while Senator Hawley is a protectionist, and yet both propose union of action on the question of raising the revenue to defray the expenses of the government."

The Philadelphia *Ledger* says: "Of the $73,000,000 gold recently imported it is estimated that about $40,000,000 was hoarded. It is believed that nearly if not all of this amount has been released since the election. The Treasury has gained $12,000,000."

The National Lead Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, payable December 15.

These securities, among others, were sold at auction this week at New York:

Decrease net earnings			.8 per cent.	

The all-rail eastbound shipments of dead freight from Chicago last week were 74,464 tons, against 68,694 tons the previous week, and 76,444 tons the corresponding week of the previous year.

The Chicago & Alton Railroad management have announced a reduction of hours of labor in the general shops in Bloomington, Ill., from eight to seven per day. It is also announced that the shops will be closed from the 25th instant to December 1, and that during December the 1,000 men employed will be given thirty-two hours per week.

The Chicago & Northern Pacific Railroad terminal properties in Chicago are announced to have been sold for $8,000,000 to the bondholders' reorganization committee.

A contract has been made whereby the Columbus, Hocking Valley & Toledo Railway Company will on and after December 1, 1896, enter the Union Depot over the tracks of the Lake Shore & Michigan Southern Railway Company.

The executive officers of the railway brotherhoods of the country are to meet in Chicago to-day "to determine what measures they want to push before the coming session of Congress, and the best way in which to do it."

A dispatch from Pana, Ill., says that the Illinois Central Railroad Company is decreasing its force in different departments. Depression in traffic is given as the cause. It is said all departments will be affected.

As a result of the large volume of grain now going out at the port of New York, the principal grain-carrying railroads in and about that port have found it necessary to charter canal boats for use as lighters, and in consequence the boatmen are demanding higher wages than usual. The *Journal of Commerce* states that $3 and $3.50 per day is being paid, and boatmen are asking in some cases as high as $4 per day.

Miscellaneous.

Acting upon the assumption that a tariff bill is to be formed by the Fifty-fifth Congress, the executive committee of the National Grange, Patrons of Husbandry, have submitted a report demanding that equal protection be given the farmer as is given the manufacturer or other class of citizens affected by a revenue measure. No expression is given on the export bounty question, but the admission is made that possibly the farmer may derive some benefit from this policy. The delegates called at the executive mansion, Washington, November 15 and paid their respects to the President.

Foreign.

The legislative council of New Zealand have voted to exclude Chinese and all other Asiatics from the colony.

The Belgian government "is making every preparation possible to insure the success and importance of the international exposition to be held at Brussels April 24 to October 31, 1897, and it is highly desirable that the industries of the United States be well represented on that occasion. The United States Commissioners appointed by Secretary Olney are Professor J. H. Gore, of Columbian University, Washington, D. C., and Thomas Wilson, of the National Museum. Professor Gore was United States Commissioner at Amsterdam and Antwerp, and was also on the jury of awards at the World's Fair and at the Atlanta Exposition. Mr. Wilson was formerly United States consul at Nantes and Nice."

A Toronto dispatch says that representatives of Barney Barnato, the Kaffir mine king of Johannesburg fame, "have secured control of practically all the mining properties in Lake of the Woods and Rainy River districts in northwestern Ontario."

A Boston dispatch says a Hamburg cablegram states that the first shipment of apples received there from Boston has just been disposed of, and netted from $2.50@$4 per barrel, according to quality. These are considered remarkably high prices, and especially as there has been a determined effort in some quarters in Germany to keep out the American product by circulating absurd stories about apples containing germs of disease. The cable further stated that the supply was insufficient for the requirements of the trade.

The British *Trade Journal* says: "A party of fifteen leading American manufacturers, under the leadership of Secretary Fishback, of the American Legation at Buenos Ayres, has been studying the condition and prospects of American trade in South America, and has just made a report which is encouraging to British manufacturers. Secretary Fishback says the United States manufacturers cannot at present compete with the British in South America."

The London correspondent of the St. Petersburgh *Novoe Vremya* emphatically denies that he is systematically hostile to England. "He is attached to this country," says the London *Times*, "by occupations, interests, tastes and habits, and above all, by numerous ties of friendship. While he reports unfavorable facts only when compelled by their importance, he dwells longer with preference on such as lessen the mistrust and create a kinder feeling. Study and meditation have convinced him that the mutual distrust between England and Russia does not arise from an insuperable clashing of interests, but from prejudices based on mutual ignorance."

The *Japan Weekly Mail* states that, according to the *Mainichi*, there are at present four bicycle workshops of note in Japan, viz., one in Yokohama, one in Kyoto, and two in Tokyo. All were opened some three or four years since; Mr. Kajino's workshops in Yokohama, and Mr. Sasaki's in Azabu, Tokyo, being the pioneers. One other big workshop is that of Mr. Morita in Honjo, Tokyo. The output of either shop does not exceed 130 vehicles or so per annum, the mechanics employed being seventeen in one and only ten in the other. They are not adepts at the work, their experience dating only a few years back. At present many different kinds of bicycles are manufactured in the workshops of Tokyo and elsewhere, the price of the machines varying very much. From a catalogue published by the Morita shop, a pneumatic tire of the first class costs 120 yen (a gold yen is worth 99c., a silver yen 52c.); a second-class machine, 100 yen, but one of special make costs 150 yen.

RECENT LEGAL DECISIONS.

[Prepared expressly for BRADSTREET'S.]

Railroad—Passenger—Station—Stop.

The Kentucky Court of Appeals held, in the recent case of The Louisville & Nashville Railroad Company vs. Miles, that it is the duty of one who desires to become a passenger on a railroad train to ascertain in advance whether it stops at the station to which he desires to go, and if, without making inquiry, he gets upon a train which is not scheduled to stop at the station for which he holds a ticket and he is required by the company to leave the train at the last station at which the train stops before reaching the station for which his ticket calls, he has no ground of complaint against the company.

Corporation—Assessment—Distribution.

In the case of The Lake Phalen Land and Improvement Company vs. Lindeke et al., recently decided by the Supreme Court of Minnesota, it appeared that the articles of incorporation of a corporation provided that a certain portion of the amount subscribed for its stock should "be paid in when called for by its board of directors." A subscriber died intestate, his estate was administered, the residue distributed to the heirs and next of kin by decree of the probate court, and the administrator discharged. Thereafter the board made an assessment on all of the stock. The court held that such assessment was a condition precedent to the recovery of the amount so called or assessed; that the claim for the same before such call was a contingent claim which could not be proved in the probate court, and that an action would lie for the amount of the same against the distributers to the extent of assets received by them.

Railroad—Accident—Fellow Servant.

The Supreme Court of Indiana held, in the recent case of The Louisville, New Albany & Chicago Railway Company vs. Bates, that a master is only required to guard against defects of which he could learn by the exercise of ordinary care in the use of reasonable and practicable tests; that a railroad company is bound to exercise ordinary care to know that foreign cars received by it for transportation are in a reasonably safe condition of repair; that the inspection required is such as the exigencies of commerce and the time, place and opportunity will permit; that the car inspector is not, while inspecting such a foreign car, a fellow-servant of a brakeman on the train of which it becomes a part; that the jury cannot set up a standard of care that shall, in effect, dictate the customs or control the business of a community, their duty being only to state in their special verdict the facts constituting care or negligence, leaving the court to draw the conclusions of law, and that the defendant must be presumed to have exercised care in selecting its car inspector.

Railroad—Collision—Employees.

The Supreme Court of Indiana held, in the recent case of The Terre Haute & Indianapolis Railroad Company vs. Becker, that where a conductor and engineman in charge of a work train are ordered to "work wild" over a certain portion of the railroad, subject to a rule which has been communicated to all the railroad company's employees, by which work trains are required to be in a side track in every instance at least ten minutes before any regular train is due to pass, the company is not liable for injuries inflicted on the fireman of one of its regular trains by a collision between the regular train and the work train, due to the failure of the persons in charge of the work train to obey the rule and put their train in a side track. The court said that the fact that the persons in charge of the regular train had no notice that the other train was working wild did not make the company liable, nor did the fact that the road was very crooked, so that the enginemen on the two trains could not see ahead, and that the employees on the work train, whose disobedience caused the injury, were fellow-servants of the injured fireman.

California Irrigation Law Constitutional.

In the case of The Fall Brook Irrigation Company vs. Bradley, the Supreme Court of the United States upheld the right of a state to divide its territory into irrigation districts, and tax the property in the districts for the construction of irrigation works. The action was begun by the appellee to procure an injunction restraining the collector of the irrigation district from giving a deed to it of the premises belonging to her, based on a sale of her land made by the collector for non-payment of a certain assessment upon such lands under the act incorporating the irrigation district, and to set aside such assessment, and for other relief, on the ground that the act incorporating the irrigation district was in violation of the Constitution of the United States and also of the California state constitution. The Supreme Court held the Wright irrigation law of California valid, overruling the decision of the Federal Circuit Court for the California District. The decision does not cover the "inclusion" and "exclusion" acts, which were adopted as amendments to the main law. The decision is of importance beyond the limits of the state of California, because of the fact that other states in the semi-arid region have adopted the law in substance.

Creditors—Execution—Bond—Sureties.

It appeared in the case of Sharvey vs. Cash et al., recently decided by the Supreme Court of Minnesota, that the plaintiff as sheriff levied an execution in favor of a firm upon certain merchandise which was worth at least six times the amount of the judgment, as the property of the judgment debtors. It in fact belonged to a third party. Several days thereafter he levied upon the whole of the same property by virtue of two other executions in favor of two other parties against the same debtors. There was at no time any concert of action in the premises between the several execution creditors. The third party afterwards made affidavit of his ownership of the property and demand for the same. Thereupon the first execution creditors, without any knowledge that the levy under their execution was excessive or of the other executions and levies, gave the plaintiff a statutory indemnity bond in the sum of $10,000, entitled in their own action only. The plaintiff sold the property in bulk for the amount of the three executions and costs of sale and paid each of the execution creditors the full amount of his judgment. The owner of the property recovered a judgment against the plaintiff for the value of the property in the sum of $5,400, and the first execution creditors paid to the plaintiff $2,651, their full pro rata share of such judgment, which was at least three times the amount of their execution. They never authorized such excessive levy or the sale of the entire property in bulk. The plaintiff took no indemnity bond from the other execution creditors. The court held that the levy on the first execution was grossly excessive, that the plaintiff was a wrongdoer as to such excess, and that the sureties were not liable to him for any further sum on the bond.

Bank—Draft—Deposit—Payment.

In the case of Hutchinson vs. The President and Directors of the Manhattan Company et al., decided recently by the New York Court of Appeals and reported in the New York *Law Journal*, it appeared that the plaintiff on the 4th day of May indorsed a draft generally to a firm of bankers and brokers, with oral instructions to deposit it with the defendant bank for collection. The firm on the same day indorsed the draft generally, and deposited it with the defendant to their own credit. As the draft was payable in Massachusetts the defendant did not at the time credit it to the firm mentioned further than to make a "short" entry in their pass book, and then immediately forwarded it to its agent in Massachusetts for collection. On May 5 the draft was paid to the defendant's agent in that state, and on the same day, shortly after banking hours, the firm mentioned made a general assignment for the benefit of their creditors. On May 6 the defendant received the proceeds of the draft in New York, and the plaintiff immediately demanded them of the defendant on the ground that the firm were holders of the draft for collection only, and that the "short" entry made by the bank in their pass book was an admission that it was received by it for that purpose. The firm in question had an account of long standing with the defendant, and at the time of the deposit in question a large balance was due from them to the defendant on demand notes. There was also an agreement between them whereby the bank was given a lien upon all their securities and deposits in its possession for obligations present and future. It also appeared that on the 5th day of May the defendant had made a further loan to the firm mentioned, presumably relying upon the draft and its proceeds as a part of its security therefor. In an action by the plaintiff to recover of the bank the proceeds of the draft, the court held that the action could not be maintained; that the rights of the parties became fixed on the 5th day of May, when collection of the draft was completed by payment of the proceeds thereof to the defendant's agent in Massachusetts, and that the defendant having no notice at that time of the plaintiff's claim, it could hold the proceeds as against the firm mentioned under its agreement with them.

BUSINESS NOTES.

Gulf of St. Lawrence Tides.

The *Railway Engineering News* says: "The tidal survey of the Gulf of St. Lawrence has been in progress for three years. The first season was occupied in examining the Belle Isle and Cabot strait entrances, and in fixing the general relation between the tides and currents of the gulf and the ocean. The second season was devoted to the St. Lawrence entrance between the Gaspe coast and Anticosti, and the nature of the currents were traced across the southwestern side of the gulf to Cape Breton. During the present year the northeastern arm of the gulf, from Anticosti to Belle Isle, has been under examination. This arm of the gulf has an area equal to that of the English channel, and through it passes all the Atlantic trade taking the Belle Isle route. Tide tables are now published covering the approach from Halifax to Quebec, the first tables which are based upon direct observations."

Russian Wheat for India.

A St. Petersburg dispatch says "that agents from Bombay are on their way to Russia for the purpose of making large purchases of wheat. All of the leading newspapers in St. Petersburg have opened subscription lists for the relief of the sufferers by the famine in India. The price of wheat in all the grain markets of South Russia and the rates for the transportation of freight have advanced materially in consequence of the foreign demand for grain. The *Metropolitan*, of Moscow, and all of the leading newspapers of that city, opened subscription lists for the relief of the famine sufferers in India, reminding the public of the sympathy shown by the peoples of Great Britain and the United States with the sufferers in Russia at the time of the famine in that country in 1891–92. Returns received by the government show that the yield of the principal cereals in fifty governments of Russia is 16,500,000 quarters below the average yield during the last thirteen years."

Alleged Insurance Combination.

A London exchange says: "A compact with the object of raising rates has been formed by the leading casualty and liability insurance companies of the United States. It comprises the United States Casualty, the Employers' Liability, the Union Casualty, the Standard, the Fidelity and Casualty, and the London Guarantee. These companies declare that they lost money last year, and that all the companies which went into competition at reduced rates failed. They will still have to contend, however, with one company in California, the Frankfort of Germany, which has obdurately held out, and whose action in doing so delayed the promulgation of the new scale of rates, which took effect on the 15th inst. An advance of 40 per cent., such as this scale discloses, should enable the recalcitrant Frankfort to put its rates on a paying basis much below the tariff of the ring, and still to get the bulk of the business on the Pacific coast, where the premiums reach about $250,000 annually."

Chicago's Drainage Canal.

The *Northeastern Lumberman* says: "Confessedly one of the most important engineering undertakings of modern date is the Chicago drainage canal, the rocky bed of this stupendous excavation exhibiting most remarkable geological formations. Of the leading modern canals, such as the Baltic, the Manchester, the Suez, the Nicaragua and the Panama, the advocates of the Chicago undertaking assert its undoubted superiority in boldness of conception, rapidity of execution, cheapness of construction, and in importance of results. Financially, it is interesting to know that of the three great ship canals built within a comparatively recent period, the Baltic, with its 61 miles of canal, depth of nearly 30 feet and width of 89 feet, consumed eight years in construction and cost nearly $38,000,000; the Manchester Canal, with its 15½ miles of channel, 26 feet depth and 120 feet width, took six years to build, and cost in the neighborhood of $77,000,000, and now the estimates of the Chicago Canal are 28 miles of channel, a depth of 35 feet and width of from 160 to 210 feet, costing less than $29,000,000."

The Disappearance of the London Miller.

The London *Miller* says: "The letter which Mr. William Jago has contributed to the present issue of the *Miller* on 'American Flour' has both an historical and actual interest. Mr. Jago is not only an analytical chemist who has made a special study of flour for the best years of his life, but is also a practical baker. His acquaintance with American flour is not of yesterday, while his experience of British flour is also extensive. His letter will certainly not please the extreme American school, who persist in looking on the British miller as doomed to shortly disappear. It is true that there are no signs of such a calamity visible at present. On the contrary, the bulk of the severe competition which has caused so many heartburnings in this country within the past two years has come, not from America, but from home mills. That America obtained a better start than Great Britain in the milling race is acknowledged, but that advantage has certainly not been maintained. Mr. Jago is emphatic in maintaining the superiority of the British miller of to-day against the world. Not less interesting is his forecast of the probable respective futures of both American and British flour. His conclusion is that, although the American miller may take 20 per cent. of the flour trade in this country, the remaining 80 per cent. is very safe, as the saying goes, to remain with the British miller. We shall be very pleased to hear what any of our readers may have to say on this important subject."

The Decline of French Trade.

The *Foreign and Colonial Importer* says: "German competition is not the only bugbear of French trade. England is another dangerous rival. While German commercial travelers are taking away French custom on land, the Union Jack is driving the French tricolor from off the seas. M. Charles Roux, the eminent member for Marseilles, having been appointed by the Committee on Ways and Means reporter on the estimates of the Commerce Department for 1897, has taken this opportunity for surveying the situation of French trade. M. Charles Roux does not wish to be an alarmist, but he finds that French trade is lagging further and further behind that of England, and that France as a commercial country is now distanced by Germany. The French merchant navy and French ports show no improvement, while those of competing countries are advancing by giant strides. In 1895 the trade of Great Britain was nearly threefold that of France. German commerce is extending at a tremendous rate. Germany has developed her harbors and merchant navy with the spirit of method and perseverance she shows in all her enterprises. She is determined to be the foremost commercial nation. The trade of Bremen has risen since 1880 from 1,169,000 tons to 2,000,000. The trade of Hamburg in the same period rose from 2,800,000 to 6,256,000 tons. In 1895 German exports exceeded those of France by £25,000,000. Hamburg is becoming the most important port on the continent. 'Each time one visits Germany,' writes M. Roux, 'one is struck with the activity with which public works calculated to stimulate trade are being prosecuted, and with the cordial coöperation between private and state enterprise.'"

Trade Combinations in Canada.

The Toronto *Monetary Times* states: "The conditions in Canada have proved peculiarly suitable to the growth of trade monopolies, and many staple commodities are produced under their control. If the old adage that 'competition is the life of trade' be true, then trade in Canada lies in the throes of death. There are monopolies in England, on the continent, and in the United States, but in no country, perhaps, have more determined efforts been made to put down competition than in Canada. All 'monopolies' or 'combinations' do not come within the same class. They may be divided into two groups—first, a combination of producers in which all interests are merged in a common undertaking; second, a more or less formal agreement of those engaged in the same business to restrict competition. A combination of the first class need not necessarily be opposed to the public interest. The saving effected through a union of productive forces may lead to a reduction of prices, and result in a benefit to the public. There are companies in Canada, formed by an amalgamation of firms that were working without a profit, who have successfully accomplished the feat of reducing prices, and at the same time making dividends for shareholders. If combinations of this class were prepared to compete fairly with such rivals as remained in the field after the amalgamation, or who began business after the combination had been formed, there would be little ground for criticism. But possessing a preponderance of the trade, there is apparently an insatiable desire to swallow up all the business of the country. The trade must buy all goods from the combination under penalty of paying additional prices for supplies not purchasable from independent manufacturers. In some instances it is a case of buying all combination goods or no combination goods, the company refusing to sell any products to traders who buy from independent manufacturers."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Jobbers and other wholesale dealers in general merchandise do not report the anticipated increases in the volume of goods distributed this week. The mild weather had an unfavorable influence, but the sharp drop in the temperature inclines to stimulate the demand for seasonable fabrics. There are increased purchases of holiday goods, and the tone of the market for staples is one of encouragement. Relatively the heaviest demand has been for dry goods, shoes and groceries, but even in these lines, particularly dry goods, the volume has been smaller than expected and disappointment is a result. There has been no decrease in the jobbing trade. In fact, it is slightly larger than a week ago, in most lines tending to increase.

The many industrial enterprises which have started up continue a feature of each day's news bulletin, but there is reason to believe the significance of these exhibits has been over-emphasized in some instances. The tendency of hides and leather to advance checks orders for shoes, and while the dry goods market is firm and dealers are hopeful, print cloths have weakened on the reaction in the price of cotton. The strength of raw wool is maintained, and orders at recent quotations have been refused. Iron and steel industries in some instances have perfected pools for the allotment of production and maintenance of prices. While the latter are firm and may go higher, demand is temporarily checked. In addition to changes in the prices noted, the week is marked by reactions in quotations for wheat, corn and oats, for sugar, turpentine, pork, lard, coffee and petroleum. Wheat flour advances, as do several varieties of lumber, iron sheets and tobacco. Combinations among iron and steel makers are expected to advance or maintain recent advances for nails, bar iron, steel beams, rails and billets and other forms of steel.

The most favorable feature of the business week is the increase in bank clearings throughout the United States, the total volume of which is $1,236,000,000, nearly 4 per cent. more than the unusually large total last week, nearly 10 per cent. more than in the corresponding week one year ago, 21 per cent. more than in the third week of November, 1894; 29 per cent. more than in the like week of 1893, and 11 per cent. more than in the corresponding period of 1892—a year of large volume of business. Outside of speculative markets the tendency of bank clearings, compared with the corresponding totals one year ago, is to decline. The gain of nearly 10 per cent. over the week last year is due largely to increases of more than 18 per cent. at New York, 40 per cent. at San Francisco, 10 per per cent. at Boston, and 7 per cent. at Baltimore.

There are 308 business failures in the United States this week, 50 more than last week, but 15 fewer than in the corresponding week one year ago, 13 more than in the like week in 1894, and 50 less than in the third week of November, 1893.

Gross and net railway earnings for nine months reflect the severe trade depression which culminated in the stagnation preceding the late presidential election. Favorable results earlier in the year have not been maintained, and the tendency is to wipe out the gains shown early in the year as contrasted with 1895. Total earnings of 136 railroads embracing 65 per cent. of the railway earning capacity of the country aggregate $576,982,922 for nine months of the calendar year, an increase over the like period in 1895 of 1.6 per cent., following a gain in 1895 over 1894 of 5 per cent. Net earnings for nine months of 1895 aggregate $176,104,827, a gain over 1895 of six-tenths of 1 per cent., following a gain in 1895 over 1894 of nearly 8 per cent. Largest percentages of gain in gross earnings are shown by the grangers and southern roads, the only decreases being by central-western and coal roads. In net earnings the southwestern, southern and Pacific roads show largest gains, while the central-western, eastern, coal and trunk lines show heaviest decreases.

Stock speculation at New York is dull and the efforts of traders to depress values, either to cover shorts or facilitate purchases of long stock, have been checked by the growth of the bear interest. The approach of a session of Congress is considered a reason for speculative hesitation. Declines have been moderate and liquidation has ceased, but fresh outside buying power fails to appear, and the firmness of money in London arrests foreign buying of our securities. The foreign exchange market has been firmer at 4.85¾ @4.86 for demand sterling. Large amounts of bills are said to have been bought for investment at the recent decline in rates.

Total exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 3,937,233 bushels, against 4,664,000 bushels last week, 2,916,000 bushels in the week one year ago, 3,312,000 bushels in the week two years ago, 2,764,000 bushels three years ago, and as compared with 3,465,000 bushels in the corresponding week of 1892. The week's exports of Indian corn aggregate 2,975,721 bushels, against 3,782,000 bushels last week, less than 2,000,000 bushels in the week one year ago, less than 200,000 bushels in the week two years ago, 1,205,000 bushels in the corresponding week of 1893, and as compared with 554,000 bushels in the like week of 1892.

Trade features at Toronto are limited to the call for heavy winter goods. At Montreal colder weather has stimulated demand, but mercantile collections are reported less easy to make. Improvement is noted in several lines, but there is no general expansion in trade. At Halifax the weather retards business. Stocks of lumber at St. John, N. B., are large, and the season's cut promises to exceed that of last year. Word is received from St. John's, Newfoundland, that the season's fishery is a complete failure. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $22,729,000 this week, compared with $26,006,000 last week, and with $19,713,000 in the corresponding week one year ago. There are 47 business failures reported throughout the Canadian Dominion this week, against 44 last week, 42 in the week a year ago, and 24 in the week three years ago.

FINANCIAL.

The Money Market.

The New York loan market reflects the continued flow of money into the banks. As a result the pressure is now on the part of lenders to find employment for funds at good rates, and the increasing competition in this respect is causing concessions. At the same time, the liquidation and inactive conditions in stock market circles tend to decrease the volume of demands. In commercial paper activity is restricted by the comparatively moderate amount of first-class names that are coming on the market. The number of buyers, both local and from the interior, is, however, increasing, and rates are quoted on the basis of 4½ @5 per cent. for double names. In time money the conditions are also easier, and the offering much larger and more urgent. A rate of 4 per cent. is now generally quoted for 30 to 90 days, and 4@4½ per cent. for four to six months, the inquiry being somewhat restricted and borrowers showing a disposition to wait for better rates. Call money is plentiful, and the current quotations for balances on the Stock Exchange were inclined to fall at the close of the week, the extreme figures having been 2½ @5 per cent.

Legal tenders	5,968,000	5,700,000	Inc. 268,000
Specie	9,472,000	9,610,000	Dec. 138,000
Surplus reserve	2,072,486	1,998,800	Inc. 73,686

The New York Banks.

True to general expectations, last Saturday's bank statement was mainly a reflection of the return of money to the banks, both on the part of individuals and outside institutions which had drawn in their resources prior to the presidential election. The principal features were the increases of nearly $16,000,000 in deposits, of $8,266,000 in specie, $4,407,000 in legal tenders and over $3,000,000 in loans. The latter change was in some quarters regarded as disappointing, inasmuch as the banks, it was currently believed, had been very liberal to borrowers of all classes after the election. The increase in the total cash reserve was $12,675,000, and agrees very well with the change in deposits and loans. As a result of the other averages, the surplus reserve increased $8,693,000, the figures of the statement comparing as follows with those of the preceding week:

	Nov. — '96.	Nov. 14, '96.	Changes.
Loans	$ [illegible]	$445,408,600	Inc. $3,228,900
Specie	[illegible]	71,968,900	Inc. 8,266,300
Legal tenders	60,717,200	65,124,400	Inc. 4,407,200
Deposits	438,437,600	454,357,500	Inc. 15,919,900
Circulation	20,510,300	[illegible],499,100	Dec. 17,200
Total reserve	124,419,800	137,093,300	Inc. 12,673,500
Reserve required	109,609,400	113,589,375	Inc. 3,979,975
Surplus reserve	14,810,400	23,503,925	Inc. 8,693,525

At the corresponding period last year the surplus reserve was $20,404,050 against $62,974,050 in 1894.

Foreign Exchange.

The market in exchange has been on the whole a narrow one, but its fluctuations were marked by considerable irregularity. At the beginning of the week the tendency was on the whole downward, the recent inquiry from mercantile interests being apparently satisfied, while a somewhat better supply of commercial drafts made its appearance. At the same time the firmness of money in London widened the difference between short bills and 60-day drafts, the posted rate for the latter class being reduced on Monday ½c. to 4.82, while actual business in bankers' long sterling fell from 4.82 to 4.81@4.81¼. The pressure of commercial bills above referred to also caused a marking down of the nominal rate for sight to 4.82, and actual business in it was quoted on Monday and Tuesday at 4.85@4.85¼. The offerings, however, became lighter on Wednesday. Posted figures for 60-day

sterling were advanced to 4.82½, and on Thursday the market developed considerable strength, the filling of an unexplained order causing a rise of posted rates to 4.83@4.86½, and actual business in demand was fully 4.85¾@4.86. It is surmised that the sudden strength is due to the covering of a short interest. Reports are further current that large amounts of 60 and 90 day bills have been taken and are held as an investment, and their sale when they reach maturity would tend to prevent a rise in the market or possibly the shipment of gold in February next. On Friday the market was dull and a little easier in tone.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Nov. 14.	*Nov.* 16.	*Nov.* 17.	*Nov.* 18.	*Nov.* 19.	*Nov.* 20.

4.82¼	4.81½	4.81½	4.81¾	4.82½	4.82½

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.86¼@4.86½; commercial bills, 4.81¼; francs, 5.21⅞@5.20; reichsmarks, 94½@95 5/16.

The Bank of England discount rate remains unchanged at 4 per cent. The bank this week gained £213,000 specie, its proportion of reserve being 52.53 per cent. against 52.40 per cent. last week. The return was considered a favorable one, all things considered. A feature is the increase of government deposits from current revenue collections. The London money market is, however, nervous and firm, and is affected by the prospect of the shipment of gold to India, as well as by anticipated demands from Russia. In the open market discount was up to 3⅞ per cent., but weakened a little on the bank return. Call money at London is quoted at 3@3½ per cent. Discount at Paris is 1¾ per cent., and in Berlin 4¾ per cent.

Imports and exports of the United States for the month and ten months ending October, 1895 and 1896 (preliminary figures for 1896, corrected to November 14, 1896):

Excess of imports	10,107,653	13,948,750

The following table shows the imports (exclusive of specie) at the port of New York for the week ending November 13, 1896:

	1896.	1895.
Dry goods	$1,316,194	$2,292,502
General merchandise	6,897,932	7,657,402
Totals for the week	$8,214,126	$9,949,904
Previously reported	390,335,722	454,098,531
Since January 1	$398,549,848	$464,048,435

The exports (exclusive of specie) from New York to foreign ports for the week ending November 17, were $3,416,304 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$11,091,450	$7,876,896
Previously reported	331,101,792	297,732,899
Since January 1	$342,193,242	$305,609,795

Silver.

The silver market showed a little firmer tone in sympathy with an advance in India exchange caused by higher rates for money at Bombay and Calcutta. The London price for bars rose to 30d., and in New York the quotation per ounce on Tuesday was up to 65⅛c. Transactions in silver bullion certificates here amounted to 43,000 ounces, at an advance in the price from 64⅞ to 65¼.

THE STOCK MARKETS.

The New York Stock Market.

Prices have been irregularly depressed during the present week, and the professional element in the stock market have generally assumed a bearish attitude. The firm condition of the London money market checks any exhibition of foreign speculative interest in our stocks, while our own outside public's purchasing has apparently been replaced by a disposition to realize profits or to liquidate holdings of long stock. There has consequently been considerable pressure of actual holdings on the market, but it must nevertheless be admitted that the unsettling influences have in the main originated with the class of operators, large and small, who are permanently active in the market. A considerable portion of them have apparently taken the bear side in anticipation of a marked decline from the high level of prices which followed the presidential election. The arguments for this course are that the market over-discounted the effects of the sound money victory upon trade, and that the possibility of a rupture in our relations with Spain in regard to Cuba, together with the approach of a session of Congress, at which financial, tariff and anti-trust legislation may be a feature, point to unsettled conditions in connection with speculation. It would seem, however, that a large and probably a more influential class of stock-market interests are simply desirous of securing a lower range of prices at which to repurchase stocks on advantageous terms. These operations have consequently been pursued with a view to creating concessions without loosing stock, but the net result appears to have been a considerable increase in the short interest, and toward the end of the week the market presented a distinctly over-sold appearance, and rallied easily on any attempts to cover short contracts, while the extreme dullness was indicative of increased caution on the part of the traders and their followings. The growing ease of the money market offsets the firmness of exchange rates, and though current reports of railroad earnings have been generally poor, it is argued that the effect of the revival of business and industry will probably result in better traffic returns as the season progresses. Friday's market was dull and steady till the last part of the day, when the list declined slightly on renewed bear selling.

Interest in the various portions of the share list has been well distributed, but it must be remarked that the activity in different stocks has been spasmodic and represents progressive activity either for the purpose of depressing their prices or of covering shorts. A few stocks were, however, exceptions to this, the principal ones being Pacific Mail, which rose from 25½ to 28⅜ on the declaration of a 1 per cent. dividend, and Metropolitan Traction, which advanced from 107¾ to 114 on the news of the conversion of the stock into shares of the Metropolitan Street Railway with an additional stock dividend of 20 per cent. Burlington also had support from an inside pool on the idea that its earnings would improve with the movement of corn on its lines, though the stock was also affected by the bearishness of the traders. The low priced stocks were affected by the liquidation of speculative holdings. Tennessee Coal was depressed from 31⅜ to 28¼, and Atchison preferred suffered from the attacks on the company in the Kansas courts and the attempted receivership there, the price falling from 26½ to 24¾. Southern Railway preferred was also unfavorably affected by the failure of the Seaboard Air Line deal, which creates fears of further rate cutting at the south. Reading fell from 31 to 29⅞, but at the end of the week appeared to have better support and rallied to 31½.

In the list of leading speculatives Sugar took its usual priority. The bears depressed the stock and there was little evidence of support, while a reduction in the price of refined and the idea that the session of Congress might result in adverse legislation aided their efforts in putting the stock from 120½ down to 116⅞, though the growth of the short interest produced frequent rallies, the stock rising to 117¾, though on Friday it was again attacked, closing at 116¾. American Spirits was in receipt of active manipulative assistance, the preferred rising to 14⅞ and the common to 32¾, while the burden of reports was that a trade agreement among the distilling interests was contemplated. Manhattan was weak on the announcement about the new status of the Metropolitan Traction which puts an end to hopes of a deal between the companies, the elevated stock falling from 100¾ to 96⅛.

Boston Stock Market.

The stock market was fairly active early in the week, but has since been inactive. Mining stocks have been most dealt in, but they have been irregular, Calumet and Hecla gaining 5 points, while Montana is about steady, and Butte ⅝ up. Railroad shares have eased off a little, Atchison losing ⅝; Chicago, Burlington & Quincy, 1⅜; Mexican Central about ½, and New York, New Haven & Hartford 1 point. West End has dropped a point, while Bell Telephone has gained 3. Sugar has dropped 5 points, while Leather has held its own.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending

General Mention.

The chairman of the reorganization committee of the United States Cordage Company announces to holders of Manhattan Trust Company certificates on deposit for bonds and stocks of that company, that on and after Friday, November 20, 1896, the Manhattan Trust Company will receive reorganization certificates for conversion into securities of the Standard Rope & Twine Company, as provided in the plan of reorganization. Details of such conversion may be found in the advertisement of the reorganization committee in another column.

FAIR VOLUME OF TRADE.

DRY GOODS, SHOES, GROCERIES AND CLOTHING RELATIVELY MOST ACTIVE—DEMAND NOT EQUAL TO ANTICIPATIONS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, November 20.—The demand for nearly all kinds of merchandise continues very fair, and in all lines of trade there is a good conservative business doing. Money continues to weaken, but there is not much demand for it. Call money is obtainable by strong borrowers at 4½ per cent., and by others at 5 per cent. Mercantile paper sells at 5½@6½ per cent. The boot and shoe market is quieter, but very firm. Manufacturers are not anxious to contract far ahead, owing to the condition of the leather market. Leather and hides are very firm and tend higher. Lumber is in better demand and firm.

Philadelphia, November 20.—Wool continues quiet, with fair prices ruling. There is less inquiry after yarn than a week ago, and while some mills are busy, others are working on short time. In dry goods there is almost a disappointed feeling because the expected increase of orders has not come. Petroleum is more active, with increased orders, and prices are steady, with improved collections. Leather and morocco are fairly active. Increased orders are coming in for boots and shoes, principally from out of town buyers. Collections are improving, and there is a manifest disposition to settle old accounts. Iron is without material change either in actual business or prices.

Pittsburgh, November 20.—There has been but little change in trade conditions here since last week. There is a good demand for boots and shoes, and dry goods buyers are more numerous than for some time. The demand for food products is fair, and prices are generally well maintained. There has been but little business in iron. The recent action of the members of the billet pool is looked upon here as a step in the direction of the welfare of the trade generally.

Baltimore, November 20.—There has been a gradual improvement in trade for the last week. The volume of business has not been very large, yet has been satisfactory, and there is a general tone of confidence. The outlook for a lucrative spring business is good, and collections continue satisfactory.

West and Northwest.

Cleveland, November 20.—In leading or staple merchandise lines the volume of trade is better. Collections are somewhat improved, and in tone and outlook the general business situation is one of encouragement.

Cincinnati, November 20.—The volume of business has increased slightly.

Chicago, November 20.—There has been no decrease in the jobbing trade this week, but it is generally satisfactory, and mostly on mail orders. Interior merchants who bought early in the season are replenishing their stocks, and although most of the orders are small they make up in number what they lack in size. The feature of the dry goods trade is increased sales of holiday goods. Warm weather has affected sales of winter clothing to a moderate extent, but as it has turned cold again, larger orders are expected. Orders for bar iron and seasonable hardware continue liberal, and, with the exception of wire nails, are weak. Prices are firmly held. Inquiries for all descriptions of steel are moderate, but with light stocks in the hands of consumers all over the country manufacturers are looking confidently for large orders in the near future. More pig iron has been sold in small lots than during the previous week, and the recent advance has been maintained. Leather is slow, but is held firmly, and hides are ¼c. lower on packers from the extreme prices of last week, but are 76 per cent. higher than twelve weeks ago. Lumber is firm, and yellow pine cannot be bought at the prices prevailing thirty days ago, as southern mill men decline to sell. Potatoes and poultry are lower, on increased receipts; butter and eggs are higher. Wool receipts, 585,316 pounds. Offerings of commercial paper are larger, and banks are buying it for the first time in months at 6 per cent. There is a good demand for municipal bonds. Collections are good.

Louisville, November 20.—Business in general merchandise is still improving, especially in dry goods, saddlery and groceries. Manufacturers of Kentucky jeans are working on full time with good

demand. The dark tobacco market is firm, and prices of old barley have advanced. Receipts are light, and collections as a rule are satisfactory.

St. Louis, November 20.—The volume of trade is gradually increasing and is satisfactory, especially in necessities. Values are improving, and in some lines to such an extent that many buyers are anticipating. Leather is decidedly strong, and manufacturers of boots and shoes believe that conditions are such as to warrant immediate buying in all directions. Better prices are received for lumber, although the movement is not specially brisk. Holders of wool are firm in their views that better prices will prevail. The apple market is glutted, weather conditions are unfavorable, and some trouble is experienced in selling even at continued declines. Receipts of furs are increasing, the quality, however, being still inferior. Higher prices have checked sale of pig iron. The coal and coke trade shows improvement consequent on the resumption of work. Bar iron and iron sheets are moving freely. Galvanized sheets have made a further advance of 2.5 per cent. It is thought the agreement on tinplates will soon go into effect, which means an advance of 15@20c. per box, and on coke tin 14@20c.

Kansas City, November 20.—Dry goods, boot and shoe and grocery jobbers are having very satisfactory trade this week. Collections are good. All other lines are dull.

Milwaukee, November 20.—On account of variable weather trade has been somewhat unsettled, though signs of more activity are apparent with the coming holiday season. Collections are a little better.

Minneapolis, November 20.—Farm machinery houses are making some sales for next season, but they are along very conservative lines. Shoe manufacturers report good advance sales. Colder weather has a stimulating effect on other lines. Collections are good.

Omaha, November 20.—Trade continues dull and collections slow.

Sioux Falls, November 20.—While wholesale trade shows no remarkable increase in volume, it goes with more spirit. Collections continue easy and retail trade is good.

Southern Cities.

Charleston, November 20.—The wholesale and retail trade report no material change. Collections are reported to have fallen off a little.

Savannah, November 20.—Trade for the week is moderate. Collections are fair. Spirits have declined. Receipts hold up well but shipments are comparatively light.

Atlanta, November 20.—Sales and collections are slightly better than last week.

Augusta, November 20.—Business is generally satisfactory, but not of large volume. Collections are fair. Cotton receipts are heavy.

Jacksonville, November 20.—Business is still improving, and collections are good.

Birmingham, November 20.—Trade is quiet, collections slow, and there is little doing this week.

Chattanooga, November 20.—Groceries are a little dull, dry goods more lively. Hardware shows an improvement, also. Iron men are in better spirits. The demand for output of local furnaces is good.

Nashville, November 20.—Trade maintains seasonable activity, with a favorable feeling due to good collections. Money is available for business purposes on old-time terms.

Memphis, November 20.—General trade is good, and a great improvement is noted in virtually all lines of business.

New Orleans, November 20.—Jobbing trade is fairly active. Cotton receipts are large. Prices are lower with a good export demand. The sugar market is lower and nervous with heavy receipts and in buyers' favor. Rice is quiet but steady. Banks show gains in holdings.

Galveston, November 20.—Trade in all lines is only fair, orders from the interior being small, and for staples only. Collections are reported fairly satisfactory, but are being pushed.

Pacific Coast.

San Francisco, November 20.—Commercial markets are unchanged. The volume of trade in most lines is moderate, while prices are firm. The produce markets are active in all lines of grain except corn. Grapes are plentiful. Collections show no improvement.

Portland, November 20.—Severe rainstorms have interrupted transportation and retarded business during most of the week. However, wheat is moving rapidly and collections are much better. The hop crop is almost disposed of. Prices run as high as 12c.

Seattle, November 20.—Business has been largely interfered with, owing to rain and washouts. Very little freight is arriving. Few mail orders are being received. October grain receipts amounted to 10,388 tons, and November arrivals indicate some increase.

Tacoma, November 20.—Railroad traffic has been interrupted by floods, but general trade continues fair. Easier collections are reported as the result of higher prices for the cereals crop.

Canada.

Toronto, November 20.—Trade is quiet and featureless this week. There is a limited movement of heavy winter goods. White fancy goods are fairly active. Prices generally are unchanged, and payments are improving.

Montreal, November 20.—Unfavorable weather depressed trade in early part of week, but later a return of colder and more seasonable weather resulted in increased activity. The volume of business is about the average, but collections are not quite so good. Prices are well maintained, with a tendency toward firmness. Lumbermen are anticipating increased demand, and better prices will carry on operations through the winter on an enlarged scale. While an improvement is noticeable in some departments, still general trade does not show much expansion, but a revival is expected early next year.

Halifax, November 20.—The movement in general trade during the week has been fair, but continued wet weather tends to retard business. Large arrivals of produce from Prince Edward Island are reported. The volume of trade in fish has been fair. Collections, however, are hardly up to the average. St. John, N. B., reports the lumber market quiet, with large stocks both on wharves and at mills. It is now thought that the winter's lumber cut will considerably exceed that of last year. Advices from St. John's, Newfoundland, indicate the arrival of large quantities of codfish from the outports. The whole fishery has been a complete failure.

Totals	.....	.....	135,351,713	125,598,555

Dry Goods.

There has been a fair volume of business in the dry goods market, and merchants are more hopeful for the future than for a long time. The situation is very firm except in one particular; that is the print cloth market, which has been weak, and prices have declined 1/16c., while stocks were large. At the close, however, the market is firmer and the demand is active. The market for plain cottons holds up strong, and goods are selling fairly well. Buyers are more inclined to take printed fabrics, and the market is stronger. Orders are more plentiful, and in size they are resembling those of a year or two ago. Dress woolens are very steady, with trade slowly improving. Orders

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM NOVEMBER 6, 1896, TO NOVEMBER 14, 1896, INCLUSIVE.

for seasonable goods are rather slow, but reorders are better than was expected. Dealers are very lightly ordered out on foreign dress goods, and on that account have been buying domestic dress goods freely. Men's-wear woolens are being well reordered.

Wool.

The wool market continues very firm, with the tendency still towards higher prices. Stocks are in good shape, and there is an active inquiry, but holders are indifferent as to selling at present values, and quite a number of good offers have been rejected the past week. Manufacturers in need of wool are buying and paying asking prices without hesitation. They are fairly well supplied with orders, but have little wool on hand. Territory wools are still quoted at 33@34c. for scoured fine and fine mediums, while choice staple lots are held up to 37c. Fleeces continue firm, with offerings small and sales moderate. Australian wools continue very firm and active, with the outlook for higher prices. The London sales open a week from next Tuesday, and an advance of 5@10 per cent. is looked for. Carpet wools are firm and in fair demand.

Exports of Mineral Oils.

According to the regular monthly statement of the chief of the Bureau of Statistics of the Treasury Department the exports of mineral oils and their by-products for October and the ten months ending with October 31, 1896, compared with corresponding periods in 1895, were as follows:

OCTOBER.

	1896		1895	
	Gallons.	*Values.*	*Gallons.*	*Values.*

NIAGARA HARNESSED AT LAST.

One minute after midnight Sunday night, November 15, every preparation having been made for the event, electric power generated by the Cataract Construction Company's new plant at Niagara Falls was transmitted to Buffalo to be utilized by the Buffalo Railway Company. This being the first transmission of electric energy generated at and by the Falls outside the limits of Niagara Falls village since the construction of the enormous electric power plant there, the event is regarded as one calling for special attention. The following account has been condensed from the report in the Buffalo *Express:*

"In the year 1885 there happened to be at Niagara Falls, engaged in the state's service in laying out a proposed reservation, which has since become the chief beauty of Niagara aside from the cataract itself, an able and experienced engineer. Nearly 50 years before this same engineer had been at Niagara, assisting in the state geological survey of Professor James Hall, who, in his report on the Niagara river district for 1843, makes special mention of the services of Thomas Evershed. During this long interval Mr. Evershed had been engaged as a public engineer, usually upon the Erie Canal in this vicinity, and it was natural that he should be called upon to devise a system for the development of hydraulic power from the river with which his whole professional career had been associated, his last great work being in connection with the effort to protect Niagara, in its principal character, as the most magnificent and impressive natural object in the world, from vandalism and utilitarian destruction.

* * * * * *

"Two months later, on July 1, 1886, Mr. Evershed published his first formal plan and estimate for the work proposed. As might have been expected, and probably was anticipated by the promoters of the project, the publication of these plans called forth hundreds of demonstrations, on paper, that proved conclusively, to the writers, that the scheme was not only impracticable, but the power would never be used if developed, and if used would not be as cheap as steam-power produced from coal. For three years the originators of the project were engaged in the attempt to convince capitalists that it would be commercially profitable to undertake and complete the development of Mr. Evershed's plan.

* * * * * *

"It was shown that the capacity of the original tunnel, about 120,000 horse-power, would exceed the combined theoretical horse-power of the eight leading manufacturing cities using water-power in the United States, and that even with good steam coal at $1.50 a ton, power could be furnished to consumers cheaper than steam could make it, and furnished for twenty-four hours in the day. As to the advantages of the Niagara region as a site for manufacturing enterprises, it was pointed out that here, in the heart of the densest population of the United States, was Buffalo, touched by nearly all of the east and west trunk lines, within a night's journey of Boston, New York, Philadelphia, Washington, Pittsburgh, Cincinnati, Cleveland, Chicago, Toronto and Montreal.

* * * * * *

"In view of all these considerations, in the year 1889 the present interests in the Niagara Falls power development were combined in a new corporation called the Cataract Construction Company, incorporated on February 10, whose acceptance of the construction contract rested upon two propositions. These were, first, that with proper organization and development the Niagara project would be valuable solely as a hydraulic installation, and, second, that it gave promise of becoming, within the very near future, vastly more valuable as a source of power for transmission. This company was the outgrowth of the very keen and appreciative interest in these propositions shown by the following men in the order named: William B Rankine, Francis Lynde Stetson, J. Pierpont Morgan, Hamilton McK. Twombly, Edward A. Wickes, Morris K. Jesup, Darius Ogden Mills, Charles F. Clark, Edward D. Adams, Charles Lanier, A. J. Forbes-Leith, Walter Howe, John Crosby Brown, Frederick W. Whitridge, William K. Vanderbilt, George S. Bowdoin, Joseph Larocque, Charles A. Sweet, of Buffalo, and John Jacob Astor. Most of these men have served as officers and directors of the company, and all have given freely of their time and experience to the conduct of the enterprise.

"Before the actual work of constructing the tunnel began, Thomas Evershed, its originator, had died. Other engineers, however, took up Evershed's plans, and the twenty months that elapsed between the incorporation of the company and the beginning of the actual work were devoted to the completion and perfection of the work in drawings for the great engineering work. Evershed's plans, however, formed the basis of all the calculations, and the tunnel as it stands to-day is in all essential respects precisely as conceived in the brain of the dead engineer more than eleven years ago.

"It was on October 4, 1890, that the first actual work of construction was begun, and the scheme, which had been derided as visionary and had gained for its originator the epithet of crank, seemed to be in a fair way to be realized.

* * * * * *

"The plan which was finally adopted and carried out comprised a surface canal, 250 feet wide at its mouth on the margin of the Niagara river a mile and a quarter above the falls. This canal extends inwardly 1,700 feet, with an average depth of about 12 feet, serving water sufficiently for the development of about 100,000 horse-power. The solid masonry walls of this canal are pierced at intervals with 10 inlets, guarded by gates, which permit the delivery of water to the wheel-pit in the power-house at the side of the canal. This wheel-pit is 178 feet deep and is connected by a lateral tunnel with the main tunnel. This main tunnel, which serves the purpose of a tail race, has an average slope of 6 feet in 1,000, a maximum height of 21 feet and a width of 18 feet and 10 inches. Its slope is such that a chip thrown into the water at the wheel-pit will pass out of the portal in 3½ minutes, showing the water to have a velocity of 26½ feet a second, or a little less than 20 miles an hour when running at its fullest capacity. More than 1,000 men were engaged continuously for more than three years in the construction of this tunnel, which called for the removal of more than 300,000 tons of rock and the use of 16,000,000 bricks for lining. The construction of the canal, and especially of the wheel-pit, 178 feet long, with its surmounting power-house, was a work of corresponding difficulty and importance.

In the meantime officers and engineers of the company, with the aid of experts in Europe and America, had spent years in devising a form of turbine wheel which could be used to advantage in the big tunnel, as well as the best and safest and most economical method of transmitting the electrical energy generated.

* * * * * *

"At 9 o'clock Sunday evening," says a Niagara Falls dispatch, "so many people demanded admission to the power house it became necessary to lock the doors after the invited guests had arrived. At 10 o'clock Secretary W. B. Rankine, Resident Engineer W. A. Brackenridge, the Hon. W. Caryl Ely, Electrical Superintendent Paul M. Lincoln and Albert H. Porter were in the power house, and I. R. Edmands, of the General Electric Company, had charge of the transformer house.

"At 11.45 o'clock Messrs. Rankine, Brackenridge and Lincoln took positions on the raised platform in front of the switchboard on the main floor of the power house and arranged the switch. Shortly before 12 o'clock Mr. Brackenridge sent word to Mr. Edmands in the transformer house that the electricity was ready for his transformers, and a minute later the switch was thrown and the power was rushing through the transformers, out on the line and away to Buffalo. Then back it came, and Edmands pronounced the machinery to be all right and delivered it to Mr. Brackenridge for the power company. It was accepted, and then the current was shut off. This occupied only a few minutes.

"Communication was then had with Buffalo and word received that the Buffalo Railway Company was ready for the power. Mr. Rankine stepped to the front, threw the switch, and Niagara power was in Buffalo.

"At five minutes before midnight, in the southwest corner of the Buffalo Railway Company's power house on Niagara street, a group of eager men stood about two machines, looking for all the world like enormous coils of black rope spun on spools and hung on circular supports. Over against the wall was a switchboard with indicators known as ammeters and six switch-handles. Facing the board was W. L. R. Emmett, the electrician in charge of the machines. Close by stood C. R. Huntley. Mr. Huntley held his watch, marking the moments until Sunday died and Monday came. There was only a minute more. A dozen watches among the watchers counted the seconds. Midnight came. Mr. Huntley nodded. The man at the switch clapped down three of the handles. One second, two seconds, three seconds passed.

"Then the coil in one of the big black machines began to turn. It started with steady, easy revolutions. A sputter of sparks, blue and white and yellow, flashed from it. There was a scratching sound, like sandpaper scraping hard wood. Then came a heavy buzz. Faster and faster whirred the coil. The buzz thickened into a rushing roar. The vision blurred in following the circling coil, and the big machine seemed to be motionless, so fast did the converter work. Not a tremble, not a quiver, only a great roaring black mass, with the center rushing round and round in a wild whir. The watchers gazed in silence for a moment. Then they began to applaud. Then they laughed delightedly and shook hands. Outside a cannon boomed. Its explosion sounded like a mere tapping of the heel on a carpeted floor to those inside the power house. Louder buzzed the big converter. The alternating ammeter showed 200 volts at the end of forty-five seconds. In two minutes the indicator had passed 350 volts, and was trembling on toward 400. In just four minutes and thirty seconds it touched 550 volts. The watchers moved back to talk it over. Niagara power was in Buffalo at last."

THAT ALABAMA COAL ENTERPRISE.

The *American Manufacturer* says: "On several occasions we have referred to the project put on foot by a number of Alabama coal producers to supply the New Orleans market and the Mississippi plantation trade with coal, to the exclusion of the Pennsylvania article. The recent starting of the coal tipple at Greenville, Miss., where the Alabama coal reaches the water, has again brought the matter into public notice. It has already been stated that favorable freight rates from the mines to the river have a great deal to do with the project. The southern railroad is largely interested, according to the statement made by a special correspondent of a prominent southern exchange. This authority states that at the rate charged by the Chesapeake & Ohio Railroad for hauling coal into Cincinnati, the rate from the Birmingham district to Greenville is 60c. per ton. The rate of towage is 25c. per ton from Greenville to points on the river below. This would make the freight rates from the mines to the river loading point 88c. per ton.

"The same correspondent makes an interesting comparison between cost of getting this coal to the New Orleans market and the expense of delivering Monongahela river coal at the same point. He estimates the cost of tonnage from Pittsburgh to New Orleans at 60c. per ton. To this he adds the cost of the boat, which makes but one trip and is then sold, the losses attendant on such long water transportation, and he gets a total of $1.70 per ton as the cost of the Monongahela product, as against 85c. per ton, the cost to the Alabama operators. Other points which he mentions are that the distance from Greenville, Miss., to New Orleans is 500 miles, against about 1,700 miles for Pittsburgh points. The dangers of navigation are mainly above Greenville. The river below Greenville is navigable all the year, as against an average of 156 days a year for Pittsburgh points. The tows are smaller from Greenville, and as the river is always open, deliveries are always prompt, and no floating tonnage, with attendant charges, is necessary to be held at any point for a market.

"We are inclined to believe that in making an estimate of the comparative cost of getting to the New Orleans market, the correspondent makes the Monongahela operators' expenses rather large. However, the cost of putting Monongahela coal into New Orleans and Mississippi river points might be cut down considerably and still leave the Monongahela operator behind in competing with an enterprise such as we have mentioned. The total charges on the Monongahela river from the fourth pool to the Ohio are $2.65 per 1,000 bushels. The coal in this pool pays toll charges of $545 per acre, including toll on empty craft. The charges in the fifth and sixth pools are higher yet. Sixth pool coal pays toll charges of $699 per acre. Thus the cost of coal per acre in the upper pools is increased five or six times by toll charges, as the first cost of coal land in the pool mentioned is only $50 per acre. This is quite a different showing from that made by the Alabama coal interest, and furnishes further proof of the need of free navigation on the Monongahela. It is estimated that the Alabama operators, by the enterprise referred to, will secure a Mississippi river trade which will amount to 500,000 tons annually. This will be quite an inroad in the market which Monongahela river coal has hitherto held."

LUMBER IN SOUTH AFRICA.

A Michigan lumberman who has just returned from South Africa, having resided several years in the gold country of the Transvaal, informs the *Timberman* that the Rand, the gold-bearing section of the Transvaal, is destitute of timber, save of a limited quantity of small stuff, suitable only for mine props. Says the *Northeastern Lumberman:* "An immense quantity of lumber and timber is used about Johannesburg, in mine works, and it is practically all imported. Large receipts come from Washington, on the Pacific slope, and a good deal of southern pine is now coming from ports on the Gulf of Mexico, also large shipments from Norway, and some from Australia. Most of the lumber is received in the form of large timber, and is resawed into suitable dimensions at the mills at Johannesburg. A planing mill is also part of the equipment. The entire plant is fitted out with American machinery. Lumber must necessarily sell very high in the interior of Africa, because the ocean freight is a heavy item, and then the railway charges from Cape Town, Delagoa Bay and Port Elizabeth are heavy. The first-named port is 1,100 miles distant from the gold regions, and the other two between 500 and 600 miles distant. Lumber does not enter largely into house construction, being utilized for skeleton frames, with a covering of sides and roof of corrugated iron. No doubt American saw mills on the Pacific slope and in the south will benefit largely by this immense demand from the interior regions of Africa."

DIVIDENDS.

THE AMERICAN COTTON OIL COMPANY.

DIVIDEND NO. 10. PREFERRED STOCK.

No. 46 CEDAR ST., NEW YORK CITY, Nov. 6, 1896.

The regular semi-annual dividend of THREE (3) PER CENTUM upon the outstanding Preferred Capital Stock of The American Cotton Oil Company has this day been declared out of the net profits of the Company, payable on the 1st day of December, 1896, at the Bank of Messrs. Winslow, Lanier & Company, No. 17 Nassau Street, New York City, to the holders of record of such Preferred Stock, upon the closing of the Preferred Stock Transfer Books.

The Stock Transfer Books of the Company will be closed on Thursday, the 12th day of November, 1896, at 3 o'clock P.M., and will remain closed until Friday, the 4th day of December, 1896, at 10 o'clock A.M.

By order of the Board of Directors.

JUSTUS E. RALPH, Secretary.

FINANCIAL.

OREGON RAILWAY & NAVIGATION CO.

To the Holders of Certificates of Deposit of the New York Security and Trust Company, the United States Trust Company of New York and the State Trust Company, representing respectively Consolidated Mortgage Bonds, Collateral Trust Mortgage Bonds and Stock of the Oregon Railway and Navigation Company.

NOTICE IS HEREBY GIVEN that on and after MONDAY, NOVEMBER 23, 1896, the NEW YORK SECURITY AND TRUST COMPANY, No. 46 WALL STREET, NEW YORK CITY, will, upon presentation to it of the certificates of deposit above mentioned, deliver to the holders thereof in exchange therefor the Consolidated Mortgage Bonds of The Oregon Railroad and Navigation Company and the Stock Trust Certificates of the Central Trust Company of New York, representing, respectively, Preferred and Common Stock of The Oregon Railroad and Navigation Company to which such holders may be, respectively, entitled under the provisions of the Plan of Reorganization, dated September 6, 1895, and amended February 5, 1896.

Holders of certificates of deposit who may be entitled to receive bonds in amounts less than $1,000, or to receive certificates representing preferred or common stock in amounts less than one share, may at their election either receive scrip representing such fractional amounts of bonds or certificates, or buy or sell fractional amounts of bonds or certificates sufficient to entitle them to a $1,000 bond or to a certificate representing a full share of stock at prices which will be fixed from time to time by the General Reorganization Committee, the New York Security and Trust Company acting as the agent of the Committee for the purpose of making such sales or purchases.

Arrangements have been made with The Oregon Railroad and Navigation Company, whereby the New York Security and Trust Company will, at the time of delivery of the new consolidated mortgage bonds, also, on presentation, pay the coupon due thereon on December 1, 1896.

For the purpose of determination of the securities to which the holders of certificates of deposit may be entitled and of preparation of such securities, it will be necessary that a few days elapse between the deposit of the certificates of deposit with the New York Security and Trust Company and the delivery of the new securities, and said Trust Company will therefore issue temporary receipts for the certificates of deposit to be ultimately exchanged for the new securities.

Dated NEW YORK, November 9, 1896.

REORGANIZATION OF

Philadelphia & Reading Railroad Company

AND

Philadelphia & Reading Coal & Iron Co.

UNDER PLAN AND AGREEMENT DATED DECEMBER 14, 1895.

23 WALL STREET, NEW YORK, November 6, 1896.

Notice is hereby given that all holders of certificates of deposit of First, Second, or Third Preference Income bonds, Deferred Income bonds, or Stock of the Philadelphia & Reading Railroad Company, under the said Plan and Agreement, who have failed to make payment of any assessment payable as heretofore called under said Plan, and who shall not before November 26, 1896, make payment of all such assessments due thereunder (together with six per cent. interest upon the amount thereof from the several dates when such assessments were due and payable), and also a further sum equal to one-quarter per cent. upon the par value of such bonds or stock deposited, will, upon November 26, 1896, without further notice or action, cease to be parties to the said Plan and Agreement, or to be entitled to any benefit thereunder or in the securities deposited or assessments paid, and will without right of redemption absolutely forfeit their bonds or stock deposited, together with any part of the assessments paid. In every such case the Managers may sell such bonds and stock deposited, and all right in the cash theretofore paid in respect thereof, or the new securities which may be issued in respect thereof, to any purchaser paying such amount as the Managers may determine, and the proceeds thereof will be used for any of the requirements of carrying out the said Plan, and as a reserve for the uses of the New Company, in the discretion of the Managers.

Payments hereunder may be made at our office, as above, or at the office of Drexel & Co., Fifth and Chestnut Streets, Philadelphia, or of J. S. Morgan & Co., London.

J. P. MORGAN & CO.,
Reorganization Managers Philadelphia & Reading Railroad Company, under said Plan and Agreement.

TO THE HOLDERS OF

Philadelphia and Reading Railroad Company's

General Mortgage Bonds,
First, Second, and Third Preference Income Bonds,
Deferred Income Bonds,
Stock.

NEW YORK, PHILADELPHIA, AND LONDON.
November 6, 1896.

Referring to our circular of May 6, 1896, notice is hereby given that after November 26, 1896, no further deposits of the above-described bonds and stocks will be received under the plan of reorganization.

Deposits will be received up to that date, but only on payment of the assesssments in full, with six per cent. interest from the dates when the several instalments were due and payable, and a penalty of

$20.00 per $1,000 General Mortgage Bond and First, Second, or Third Preference Income Mortgage Bond:
$1.00 per share of Stock;
.50 per $1,000 Deferred Income Bond.

J. P. MORGAN & CO.,

5th and Chestnut Sts., Philadelphia, Pa.

J. S. MORGAN & CO.,
22 Old Broad Street, London.

United States Cordage Co.

REORGANIZATION.

NEW YORK, Nov. 14th, 1896.

To Holders of MANHATTAN TRUST COMPANY CERTIFICATES OF DEPOSIT FOR BONDS AND STOCKS OF THE UNITED STATES CORDAGE COMPANY:

On and after Friday, November 20th, 1896, the MANHATTAN TRUST COMPANY will be prepared to receive Reorganization Certificates for conversion into securities of the STANDARD ROPE AND TWINE COMPANY, as provided in the Plan of Reorganization.

Reorganization Certificates must be endorsed in blank, and if new stock is desired in any name other than that in which the Reorganization Certificate stands the assignment must be attested by some person satisfactory to the Trust Company.

The new bonds are for $1,000 each.

Scrip will be issued to persons entitled to fractions of a bond, or to fractions of a share of stock.

Only one hundred lots of certificates will be received on each business day; the new securities in exchange therefor will be delivered on the following day.

F. K. STURGIS,
Chairman Reorganization Committee United States Cordage Co.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 28, 1896.

The national legislature will reconvene in a little over a week for the short session, with which the work of the Fifty-fourth Congress will come to an end. The fact of the session being a short one will undoubtedly militate to some degree against the enactment of some important legislation. For one thing, the passage of the appropriation bills will occupy much of its time and can be made to occupy more. In the next place, there seems to be considerable doubt as to the policy to be pursued in reference to revenue legislation, and this may result in its postponement until the meeting of the next Congress, when there will be in the White House a President in political sympathy with the controlling party in the legislative body. Then again, no doubt some time will be taken up with the discussion of the Cuban situation, which has been gradually getting into the foreground. The outlook for a very fruitful session is therefore not at present very bright.

About the action to be taken upon the tariff nothing seems to have yet been definitely determined. Indeed, the leaders of the majority party are not agreed upon the question at all. Some of them seem to favor the passage of the Dingley bill as a means of furnishing immediately needed revenue, while others, and seemingly the more numerous of those who have spoken upon the question, urge that the effort to pass that measure be abandoned, and the task of framing a tariff law on a permanent basis be remitted to the next Congress. One of the Senators who takes this view suggests that the temporary need of revenue might be met by the authorization of a short-time loan. In all probability we must wait until the Republican members have held a caucus shortly after the meeting of Congress. Some talk is heard of the advisability of having the tariff question considered by a commission. This plan will be urged by Senator Cullom, who some time ago introduced a bill providing for the reference of the perennial tariff question to such a commission. Whether it has now any greater chance of adoption than it had before remains to be determined.

The idea of a currency commission continues to attract favorable attention. The Indianapolis Board of Trade has taken a leading part in bringing the subject to the front. At a meeting last week it adopted a resolution reciting the determination of the people to have a sound system of currency, and inviting the boards of trade of Chicago, St. Louis, Cincinnati, Louisville, Cleveland, Columbus, Toledo, Kansas City, Detroit, Milwaukee, St. Paul, Des Moines, Minneapolis, Peoria, Grand Rapids and Omaha to send delegates to a preliminary conference to be held in Indianapolis December 1, 1896, for the purpose of considering the advisability of calling a larger conference, composed of delegates from the boards of trade and commercial organizations of the cities of the United States to consider the propriety of creating a non-partisan commission to which shall be assigned the duty of formulating a plan for the reform of the currency, to be reported to a subsequent meeting of the conference. The cities invited to send representatives, it will be seen, comprise the principal business centers in the central west. They were selected on the suggestion of Mr. H. H. Hanna, who said that the west would not take up the cause, and that the east should not do so, but that the central west, by reason of its importance as a factor in the commerce of the country, and its geographical relation to the other sections in which financial views are considered more or less extreme, should act.

In a sense, of course, the functions of the Venezuelan Boundary Commission may be said to have been terminated by the arbitration agreement recently concluded. Still that body has done labor which must have a very distinct value, and it expects to make some sort of a report, even if not one covering the ground originally intended. Justice Brewer has been in conference with Secretary Olney regarding the nature of the report which the commission will make. It is understood that the commission stands ready to make a final and conclusive ruling upon the question in controversy if that shall be desired, but in the event of the arbitration lately arranged for being finally accepted it will, of course, make a merely formal report submitting the evidence collected by it. At present the only apparent obstacle to the immediate ratification of the treaty is the fact that the Venezuelan Congress has to be called in extra session to ratify it.

Washington advices indicate that Secretary Carlisle has in contemplation the promulgation of an order permitting the resumption of the issuance of gold certificates, and it is understood that the recent visit of Assistant Secretary Curtis to New York has been in connection with this subject. The Secretary has been obliged at times during his incumbency of the Treasury Department to exercise the authority vested in him by law to stop the issue of gold certificates whenever the reserve falls below the $100,000,000 mark. The Secretary found on two occasions after the issue of gold certificates was resumed that he would have to suspend the issue again in a few days, and he decided not to direct the issue of gold certificates again until the gold balance should give some promise of stability.

Seacoast defenses naturally occupy a prominent place in the annual report of the Secretary of War, who says that the total amount appropriated for seacoast defenses, including cost of sites, fortifications and armaments, since the adoption of the present scheme, is $26,457,000, of which more than one-third was carried by the act passed at the last session of Congress. Secretary Lamont says that his predecessors in office at the head of the War Department had, during many years, the difficult task of arousing the public mind to a realization of the national deficiencies in the matter of coast defense. As the interest which has been awakened has grown deeper, successive Congresses have made more liberal provision for the accomplishment of the adopted scheme. Therefore, in submitting the estimates for another year, he feels that it is no longer necessary to repeat the arguments that have been reiterated so many times.

The army is still somewhat below the number authorized by law, but its condition appears to be more satisfactory than at any previous time in its history. During the year covered by the report each soldier was sick 12.4 days, as against a record of 15.3 for the preceding ten years. The number of soldiers so disabled as to require their discharge from service was 9.15 per thousand, as compared with 23.77 annually for the preceding ten years. The mortality rate was 5.16 per thousand of mean strength, as compared with 7.85 for the preceding decade. The enlisted men of the colored regiments are apparently less susceptible to most diseases than the whites. The reports show that each white soldier lost 12.6 days on account of sickness, while the men of the colored regiments lost but 9.6 days. The general system of army administration seems to be improving. The paymaster-general reports that during the year the army was paid monthly, the first year in which this result has been attained. Under the new system all recruits reach their companies within a few days after enlistment, and become trained soldiers much sooner than under the old system.

Irrigation is making some progress in the Indian reservations in the west, where the need of it has long been felt. For example, Superintendent Graves, who has been in charge of the Crow reservation in Montana, reports that since he has been in charge nearly 800,000 cubic yards of earth, gravel and rock have been excavated and handled, and more than 100 miles of ditch channel constructed, through most or all of which water is now flowing, and supplying from 20,000 to 25,000 acres of land. The greater part of the work has been done by Indians. Of cement masonry, 850 cubic yards have been laid, and 300,000 feet of lumber have been framed and placed. There had been drawn from the funds set apart for this work $257,599, of which $203,712 was for labor. At Fort Hall, in Idaho, a similar system of work could not well be carried out, as prior appropriations of water threatened to interfere with the supply. Accordingly a contract was made for the delivery of water with a company which proposed to furnish it. The importance of irrigation to the Indians in some of the reservations in the arid belt is well understood. Their need of water for farming and pasturing purposes is greater than that of the whites, and in some cases their wanderings beyond their proper limits is due entirely to the desire to obtain water.

Some points of interest are set forth in the annual report of the Japanese Bureau of Merchant Marine, which has just been received in the United States. The report discloses the fact that Japan is making very energetic strides in the development of its merchant marine. It shows that Japan has registered for foreign trade 109 iron and steel steamships, of 231,139 gross tons, whereas the United States has registered for foreign trade 103 vessels of the same kind, of 226,503 gross tons. The Japanese merchant fleet includes 114 vessels of over 1,000 tons, chiefly steamers of British or German build. The American merchant fleet on the Pacific coast numbers 119 vessels of this size. The chief Japanese steamship line, which has recently made Seattle one of its terminal points, owns 51 steamers of 28,000 tons, whereas the Pacific Mail line employs 15 steamers of 43,000 tons on the Pacific. Since 1890 twenty shipyards have been established in Japan, some of them of very large capacity, and the subsidy law which went into effect in October gives shipbuilders a bounty of $10 per gross ton on steel vessels over 1,000 tons and $2.50 horse power.

STOCK PRICES SINCE THE ELECTION.

Severe disappointment has been encountered by speculators on the stock market who anticipated that the triumph of the sound money cause would be followed by an immediate boom in prices. In fact, the course of quotations has justified the course of the professional operators who took advantage of the temporary advance that followed the victory over the silverites at the polls, and realized profits over their speculative holdings acquired either immediately before the election or in the first few days after November 3. It is indeed claimed that this very element, comprising the bulk of the habitual traders on the Stock Exchange, backed up by some of the large and prominent interests in the market, have been instrumental in causing the recession of prices by the familiar manipulative methods either for the purpose of covering their short contracts at a profit or of establishing a lower basis of values at which stocks could be purchased with advantage for another and better sustained advance. It is urged that the election has restored confidence in both business and speculative circles, that money is easy, that investments are in demand again, and, above all, that the decided revival of trade and manufacturing in all lines are favorable to an appreciation in the market values of corporate securities of all classes. In opposition to these may be set forth the undeniable fact that the business revival is proceeding upon conservative lines, with nothing wearing the appearance of a boom; that railroad earnings have not improved—on the contrary, some of the most prominent corporations of this kind showing decreases for the current periods as compared with the corresponding times last year, and that London as well as our own public has failed to interest itself in stock-market speculation. Indeed, the liquidation that has undoubtedly been produced in stock prices during the past fortnight bears out, to all appearances, the claim that the portion of the public which came into Wall street and acquired stocks indiscriminately for a few days just after the election has taken notice of the unfavorable elements above referred to and has retired from the speculative arena for the time being. Nor should it escape notice that the so-called Cuban "scare" and the idea that the meeting of Congress will be productive of unsettling legislation in various matters of interest to the market have been apparently effective in creating a doubtful temper as regards the immediate future of the stock market that has unquestionably dampened the ardor of the public. These two factors, it is possible, have been exaggerated by bearish manipulators to serve their own purpose. The fact however remains that one of the notable circumstances is the apparent unwillingness of the large operators and the combinations or buil pools to take any active steps toward securing a higher range of prices, which might tend, as it usually does, to reanimate the flagging outside interest. London's continued indifference to American stocks has also been another adverse circumstance. The result of the election was hailed there by the financial classes with almost as much enthusiasm as was shown here. Still the revival of buying in our market from foreign sources was as brief as it was in Wall street, though this may be partially explained by the untoward circumstances in connection with the London money market, the prevalence of uncomfortably high money rates there having put a damper upon speculative feeling generally in that market.

The course of prices since election may be examined with interest by the aid of the following tabulation. The figures given are the lowest prices in 1896 for fifteen of the more prominent speculative securities on the stock list, followed by the highest prices they attained after the election on November 3, and the lowest level to which they have sold during the reaction from the advance:

	Lowest. 1896.	*Highest after election.*		*Lowest since.*	
St. Paul	59⅞	80	Nov. 4	74¼	Nov. 27
Burlington	53	83½	Nov. 9	78¼	Nov. 23
Rock Island	49¼	74⅞	Nov. 10	69¼	Nov. 21
Atchison	8¼	18	Nov. 4	14½	Nov. 23
Missouri Pacific	15	26½	Nov. 9	22½	Nov. 23
Union Pacific, June	3½	12⅛	Nov. 4	9⅝	Nov. 21
Louisville & Nashville	37⅛	51⅛	Nov. 10	49½	Nov. 25
Missouri, Kans. & Tex.	9¼	14¾	Nov. 10	13⅜	Nov. 23
Southern Railway pfd	15½	33⅛	Nov. 10	28⅞	Nov. 23
Reading	21	31⅞	Nov. 10	29⅞	Nov. 16
Sugar	95	125	Nov. 4	116¼	Nov. 21
General Electric, July	20	35½	Nov. 9	31¾	Nov. 17
Chicago Gas	44⅝	78½	Nov. 9	75¼	Nov. 24
Manhattan	73¼	104	Nov. 10	95½	Nov. 24
Western Union	72¾	90¼	Nov. 11	86½	Nov. 23

The low prices preceding the election were, with two exceptions (General Electric and Union Pacific), made on or about August 8 last, when the fears aroused by the progress of the free silver propaganda became most acute, and resulted in a condition of speculation that almost bordered upon a panic. The dates of the highest prices after the election and lowest of the subsequent reaction are of especial significance. In a few cases, four stocks out of the fifteen given, the best figures were recorded within a few moments after the opening on November 4. The greater number are, however, credited to the three days November 9, 10 and 11. In other words, the upward movement started by the election culminated within a week. It would, however, appear from the dates given in the succeeding column of reactions that the bear movement itself has halted somewhat since November 23; or, to put it in a different way, the effect of the unfavorable developments in creating liquidating and realizing sales in the market exhausted its force within a fortnight from the culmination of the upward movement. This would indeed correspond with the generally accepted theory that the selling of stocks for the short side of the account has reached proportions that prove an embarrassment to operators engaged in that style of speculation, and that the absence of further supplies of long stocks have caused a halt in their success and activity. It will indeed be observed that while the advance represented by the difference between the low figures of August and the high ones made immediately after the election are mostly of a very marked character, the reactions which have followed are mostly confined within a limit of three to five points, and that in two cases only (Manhattan and Sugar) do they run up to anywhere near ten points.

THE LONGEST RAILROAD IN THE WORLD.

The announcement made in a European paper that the section of the Transsiberian Railway extending from Cheliabinsk on the eastern slope of the Ural mountains to the Obi river, nearly 900 miles, was opened to traffic on October 27, recalls the fact that this great work is steadily, if slowly, proceeding toward completion. It is now possible to go from St. Petersburg or Moscow to Kolivan, a distance of 1,800 miles, without change of cars, in less than five days. The announcement further means that the greatest military and commercial railway undertaking of modern times is now in a fair way to be realized. Writers have instanced in comparison the building of the Pacific railroad lines in this country and in Canada. But the Siberian line is unique in some respects. When completed it will be the longest stretch of railroad track ever laid. The Canadian Pacific from Montreal to Vancouver is 2,900 miles long, whereas the Siberian railroad as projected will be fully 4,700 miles of continuous track. Traversing, as it will, throughout its entire length, Russian territory bordering upon the possessions of two other empires, it promises to have military possibilities of surpassing interest. The climatic and engineering conditions under which much of the work must be done ranks it as a most remarkable undertaking, aside from its immense cost and the large number of people employed in the work.

An exhaustive description of the natural advantages and resources of Siberia, with a very full programme of what was to be attempted in the line of railroad building by Russia, appeared in BRADSTREET'S three years ago. As long ago as 1857 such a railroad was discussed, but the project never really attracted attention until 1890, when a special commission was appointed to consider the extension of the Russian railway lines from the Ural mountains to the Pacific. The building of the road was determined on February 21, 1891, and on March 17 this was affirmed by imperial rescript. On May 12 this was promulgated by the Czarovitch, now Czar Nicholas II., and on the same day His Imperial Highness himself formally began the work of construction. In the same year surveys were begun from both termini of the route, and by the end of the year the order of construction had been settled.

Commenting on the progress of the work at that time, BRADSTREET'S, November, 1893, said: "It is expected that the South Ussurisk section from Grafsk to Vladivostok, about 260 miles, will be completed in 1894, and the West Siberian, from Cheliabinsk to the river Obi, about 900 miles, in the year 1896." The announcement of the completion of this section, it will be seen, comes promptly to time with the above prediction. It is of peculiar interest to Americans to note that the completed section of the Siberian road runs through the richest grain-growing part of Siberia, a section of country which is expected to be the granary of Russia, and perhaps compete with other countries, including our own, in the grain trade of the world.

A good idea of the engineering difficulties which had to be met in the building of this road is obtained from an article in the *Engineering News* of last week. Experience gained in the building of other great continental lines, notably here and in Canada, has been a guide to Russian engineers. Much of the work in Siberia is, of course, of a rough character, but sufficiently permanent in all cases to suit requirements of the near future. Photographs of the work done show that some of it has been of a substantial character. In the building of bridges, station buildings, embankments and masonry work, the progress made and the results achieved are surprisingly good. The line of the projected road is from Cheliabinsk to Vladivostok, the latter being as yet the best available Russian port on the Pacific. The Western Siberian section from Cheliabinsk to the Obi river, now completed, covers 878 miles, about 18 per cent. of the 4,708 miles of road. There are other sections that have been completed, as reported in a recent issue of the London *Times*, among them a section of eighty miles in central Siberia, the next division east, which is in operation. But a year will elapse before the 1,100 miles through central Siberia will be finished. Between Irkutsk, on Lake Baikal and the Amur river, preliminary surveys have not been completed. In the Baikal basin nothing has been done beyond the construction of a great dyke, which is not finished. In the lower Ussurisk section, that from the Vladivostok to Grafsk, 250 miles have been constructed.

The *Engineering News* states that the estimated cost per mile of work on the railway varies from $41,725 on the Cheliabinsk section, that already completed, to $89,397 per mile on the section from Irkutsk east, which includes work on the Baikal basin and in the mountains east of that. The highest point reached on the road is 2,610 miles east of Cheliabinsk, about two-thirds of the way to the Pacific, and here some of the hardest work is to be done in a climate unexampled for severity. It is practically a desert to-day. On this section in the Yablonoboi mountains the temperature rises to 77° F. in the daytime and falls to 23° F. at night during June and July. In 1886 the temperature was above freezing for only three months. As the atmosphere is quite dry and very little snow falls, the ground is frozen nearly all the year round. Investigations made in the valley of the Chita river showed that the depth to which the soil freezes averages 23½ feet. In the summer the top soil is thawed to a depth of about twelve feet, the remaining depth being always frozen. The most southerly portion of the present location, excepting Vladivostok lies north of 51° N. On our continent 55° N. would strike the southern boundary of Alaska and the shore of Hudson bay, pass nearly 100 miles north of Lake Winnipeg and through the middle of Labrador.

In the level sections of Siberia through which the railway passes the grade varies from one in 600 to one in 800, but in the mountain sections these limits are increased to grades one in 150 to one in 174. The width of the roadbed is 15.75 feet on the road embankment and 15.4 feet in cuts. The track is the Russian standard gauge of 4 feet 11¾ inches, and has 49-pound rails. The stations, section lines and other buildings are generally of wood, but in some sections brick stations are built. Some of the bridges and tunnels to be built are very long. The labor used has been partly imported from European Russia, the material used being shipped in by the completed line in part, but generally by boats traversing the various rivers. As many as 150,000 laborers have been employed at one time during the summer months. That part of the material used on the Pacific was sent around by steamer, and thence up the various rivers to its destination, while on the west or European side it was brought in by the completed road itself. The total estimated cost of the road is placed at 350,000,000 roubles, which, calculating the Russian gold rouble at 73.2c., would make a total cost of $270,000,000. It is intended to have the rails laid for the whole line, except for that portion around Lake Baikal and the 1,400 miles about the Amur river, within two years. The Amur line may be completed in four years, but political exigencies may affect this somewhat. Reference to the

map shows that by crossing Chinese territory nearly 700 miles of road building would be saved, and there is a possibility, of course, of this last section being completed before the time set. For the loop around Lake Baikal a car ferry is to be substituted for the present, and when the ice is too thick for navigation rails laid on the ice will take the place of the ferry, while on the Amur division a steamboat service may be substituted.

It has been pointed out that the ascendency of Russia at the Chinese Court may make a radical change in the Pacific terminus of the Siberian road. Vladivostok was selected because no other port on the Japan sea was available at the time, but it is closed by ice for a considerable part of the year, and another port open at all seasons would be preferable once the great railway is opened for traffic. The comparatively small amount of work done on the Pacific end of the Siberian Railway is taken by some as an indication of possible change in the Pacific terminus of the road. Tokio advices of November 17 report that the Russian representative at Pekin has obtained important concessions from the Chinese government, which allow of the laying of the Transsiberian railway track across Chinese territory to Vladivostok. This, if true, may do away with present plans for work upon the eastern end of the projected road, the track being laid in almost a straight line from east of Irkutsk east to the Pacific at Vladivostok. The advantage of this route would be that the road would pass through a fairly well-populated country and avoid some of the most difficult and expensive work on the line of the Transsiberian Railway.

THE CONDITION OF THE FARMERS.

Some reference based upon telegraphic forecasts has already been made to the annual report of the Secretary of Agriculture, but the report itself, which has just been issued, touches upon many subjects to which a fresh interest has lately been communicated, and to which a reference at this time will not be out of place. Among the topics dealt with in the report none possesses greater interest than the Secretary's discussion of the condition of the agricultural class. He says that 72 per cent. of the farms in the United States occupied by their owners are absolutely free from mortgages or other incumbrances. Out of each 1,000 farms but 282 are mortgaged, and three-fourths of the money represented by the mortgages is for the purchase of the farms or for money borrowed to improve them. The Secretary refutes the idea prevailing that the farms of the west and south are more heavily burdened with mortgages than those of the east and northeast. States along the North Atlantic, he says, are quite heavily incumbered with farm mortgages, and New Jersey carries a debt of this kind greater in proportion to its farm valuations than any state in the Union. The frequent claim that the farmers are almost universally in debt, despondent and suffering, he declares to be without any foundation, a belittlement of agriculture, and an indignity to every intelligent and practical farmer. The farmers, he says, are not mendicants nor wards of the government to be treated to annuities, but the representatives of the oldest, most honorable, most essential occupation of the human race, upon which all other vocations depend for subsistence and prosperity.

The Secretary then touches upon the stress of competition which the American farmer is called upon to meet, and calls attention to the nearly 2,000,000 of farms of eighty acres each given away by the government under the Homestead act of 1866 during the past thirty years, and to the amount donated under the Timber Culture law, equivalent to over 550,000 more farms of the same size. He says that lands long tilled and rendered partially infertile could not, of course, enhance in value and sell in competition with virgin soil donated by the government, and that no legislation relative to the public domain has been so directly inimical to the farmers who had bought and paid for the lands upon which they had lived and labored, it being impossible for farmers in the old states to profitably sell their products in competition with those of the newer states grown upon lands which cost their owners nothing.

In the next place Secretary Morton refers to the impression that greater rates of interest are charged for money loaned upon farms than for that loaned upon other kinds of real estate. He declares that the rate of interest charged on mortgages upon residential property other than farms averages eighty-four hundredths of 1 per cent. less than the rate of interest charged upon farm loans. In seventeen states the average rate charged on the latter is less than that demanded for loans upon other residential property. In two states the rates are the same upon urban and rural real estate. In Pennsylvania, Maryland, Virginia, West Virginia, Kentucky, Michigan, Wisconsin, Iowa, Kansas, Texas and Alabama the rates of interest are less for money secured by farm mortgages than for money secured by other realty. In five states, including Kansas, the difference in favor of the farmer is from one-fourth to one-half of 1 per cent., and in Texas it is over 1 per cent. If a western farmer pays a higher interest than the eastern, so, also, he says, does the western merchant, common carrier or manufacturer. In the western states, during the last ten years, there has been a steady maintenance of land values in nearly all sections, and in some an enhancement. The increase of farm-land values between 1880 and 1890, reported by the farm occupants themselves, more than offsets the entire interest charged for the decade in most of the great agricultural states of the west and south. In Kansas and Nebraska the increase of land values exceeded the entire incumbrance, principal and interest, and in the states of Washington and California was nearly twice as great. Where the interest was highest the increase in value was greatest.

In another place the Secretary touches upon the exports of our agricultural products. He directs attention to the fact that during the fiscal year just ended the exported products of American farms aggregated $570,000,000, an increase of $17,000,000 over the preceding year. In spite of this there was a falling off in the percentage of agricultural products exported to the total exports, but this was due to the unprecedented sale abroad of American manufactured goods. The largest market for our products is admitted to be the home market, but the export trade is the regulator, the balance-wheel for domestic trade, and the interest of the manufacturer as well as of the farmer is found in the most rapid possible increase of the export of farm products. General prosperity, the Secretary says, depends absolutely upon agricultural prosperity, and any commercial system which will increase with celerity, and extend with certainty, the export of our farm products will be of the utmost advantage to agriculture and all those interested in its profitable expansion, and that political economy which best advances the interest of the agriculturist furnishes the best impetus to the manufacturer of the United States, for his best customers are farmers and those who depend directly for profit upon the prosperity of farmers.

THE BRITISH TINPLATE INDUSTRY.

Trade and other publications in the United Kingdom are admitting that while the crisis in the English (Welsh) tinplate industry has been threatened for some time, it is none the more easily settled on that account.

In fact, the change in the tinplate industry during the past six years, since the McKinley bill undertook to aid its establishment in this country, not only bears out the claims of the friends of the tinplate sections of the McKinley bill, but tends to upset the arguments of that class of economists who have declared, in school and out, that the added tariff would increase the cost of the protected article to the consumer.

A study of the prices of tinplate prevailing before and after the passage of the McKinley act "will show that in September, 1890, tinplate, I. C., 14 by 20, was selling in New York at $5.17 per box, and that in July, 1891, when the McKinley bill went into effect, providing a duty of 2²/₁₀c. a pound, it was only bringing $5.28 per box, or 11c. more than it was ten months before the McKinley bill went into effect. The highest price it reached at any time under the McKinley law was $5.50 per box, and generally it was lower. In October, 1894, it was selling as low as $4.09; in December, 1894, at $4; in December, 1895, at $3.82, and in January, 1896, at $3.86. It is a noticeable fact that tinplate and the articles manufactured therefrom are selling to-day to the consumer for less money than when the McKinley bill went into effect."

With this picture of what has been accomplished in mind, it is of interest to learn that the tinplate workers in Wales have asked for the reëstablishment of the wages scale of 1874. In reply the London *Iron and Steel Trades Review*, among other English technical journals, replies that such a course would be practicable if trade conditions which existed in 1874 could be restored.

In June last an investigation was made into the condition of the tinplate mills in South Wales, with results that certainly do not support the demand made by the Welsh workmen. The figures then collected showed that there were 184 idle mills; mills working on 1874 list, 8; mills working at 10 or 12½ per cent. reduction, 170; mills working at 15 per cent. reduction, 170; mills working at 15 per cent. reduction, 47; mills working at 20 per cent. reduction, 12; mills working at 22½ per cent. reduction, 5. The men declared that there never was a time when the permanence of the 1874 list of wages or other wage standard was more seriously imperiled. There was scarcely a vestige of uniformity left; the wage abatements ranged from 10 to 22½ per cent. Months ago the operatives engaged at the Old Castle, Western and Old Lodge Works, Llanelly, employing close upon 4,000 hands and distributing in wages £2,400 per week, conceded a reduction of 10 per cent. The men are now asked for nothing short of 20 per cent. At Llanelly the employers declared that they could not keep their works going unless the workmen agreed to a reduction of 22½ per cent. on the wage list of 1874. In the Morriston district the catchers and behinders revolted, and refused to accept any reduction of wages. The behinders are young men from eighteen to twenty-four years of age, who earn, when paid in full, some 3s. 9d. per day. The catchers are boys of from sixteen to twenty, who earn from 2s. 6d. to 3s. per day. The scarcity of employment at the Forest and other works had brought about a division of work. Many of these young people for this reason earned no more than 10s. to 12s. per week.

Commenting on these figures, an American contemporary says our friends on the other side of the water declared that we could not make tinplate. First, they held that it would take long years before we could properly tin the plate, then they said we might learn to tin, but we would have to send abroad for the black plate. But experience proved that they were wrong, and that the industry could be established here. When the McKinley tariff went into effect American manufacturers were given six years to show that they could make tinplate. Yet within two years the provisions of the law had been met—that is, that the amount of tin and terne plates made in the United States, plus the amount of articles made from sheet iron or steel or tin, equaled one-third of the amount of tin and terne plate imported, less the amount reëxported. "Greater progress in establishing a new industry," adds the London journal, "was never seen."

The same authority characterizes the effect of the McKinley bill on the tinplate industry as "little short of a revolution." The tinplate industry has been transferred by the influence of that measure from South Wales to Pennsylvania, the story of which "reads like a romance of industry."

Quotation marks are not needed to lend authority to the statement that Pennsylvania has taken a prominent place among the tinplate manufacturers of this country, and that the manufacture of tinplate in America is of a permanent character. The latest official report of the progress of this industry in the United States published in BRADSTREET'S last week fully bears out all that has been stated. Notwithstanding all of the difficulties that have been encountered, the production of tinplate is growing with such rapidity "that it will be but a brief time until, with proper fostering, America will produce all the tinplate necessary for her consumption. The argument that the encouragement offered to American manufacturers of tinplate by a high duty would make the price of the tin so high that the consumer could not afford to buy it has been found to be a myth."

During the year ended June 30, 1896, the production of commercial tin and terne plates in the United States was 307,228,621 pounds, against 193,801,073 pounds in the previous year, showing an increased output of more than 58 per cent. The law required that after October 1, 1897, the duty should be taken off unless it should be shown that in one of the six years following the aggregate quantity of tinplates lighter than 63 pounds per 100 square feet produced in the United States was equal to one-third the amount of such plates im-

ported and entered for consumption. The *American Manufacturer* says: "Two years ago American tinplate manufacturers more than met these requirements, and in the last fiscal year the showing was a great deal better." The net imports in that time were 247,410,593 pounds, and the amount of tin and terne plate lighter than 63 pounds per 100 square feet manufactured in American mills was 264,919,892 pounds. Thus we see that the product of the American mills has exceeded the imports by 17,509,299 pounds. For some time the home production of black plate was away below the total output of American tinplate. During the last fiscal year, however, 98½ per cent. of the finished tinplate made in the United States was made from sheets rolled in American mills. Out of the fifty-three firms producing tinplate in this country, "fifty used wholly American rolled sheets, and less than 2 per cent. of the largely increased product was made from imported sheets. The increased use of American steel by stamping companies, in the manufacture of articles stamped into forms and afterwards tinned, is another gratifying feature of the report."

After reviewing these facts our London contemporary declares it "arrant folly" on the part of the tinplate workers of South Wales to persist in their demands. "If they do so persist, one thing may be predicted with confidence. The trade that is left to the Principality will in that case quickly and surely disappear, and our new but extremely formidable rivals on the other side of the Atlantic—who have already secured a large slice of the Canadian market—will keep an open eye on the possibilities of securing the markets that we will thereby exert ourselves to lose."

BALTIMORE & OHIO.

Inasmuch as the Baltimore & Ohio Railroad is destined to pass through a process of reorganization, more than usual interest attaches to the annual report for the year ending June 30 last, which was made public at the annual meeting of the stockholders last week. The report was in the customary form, and only a brief reference was made to the appointment of receivers early last year. The comparative statement of earnings covering the results of the year just completed and the preceding twelve months were as follows:

Year ending June 30.	1896.			
Net earnings	$6,361,361	$7,016,136	Dec.	$65
			Dec.	55
Washington			Dec.	$1,213
			Dec.	14
Available income.			Dec.	$1,138,962
Interest, rentals, etc.			Inc.	443,211
			Dec.	$1,582,175
			Dec.	150
Balance	*$22,494	†$1,409,681	Dec.	$1,432,175
Sinking funds and car trusts	694,834	770,164	Dec.	75,329
Final balance	*$717,328	†$639,517	Dec.	$1,356,845

* Deficiency. † Surplus.

The statement may be regarded as moderately favorable, particularly as it is attended by a fair gain in tonnage, the total number of tons moved during the year on the entire system being 17,861,927, as against 16,080,423 in 1895. The tonnage is the largest in the history of the company, and accords with the belief that the receivers have successfully exerted themselves to obtain business. In fact, it is intimated that at present the Baltimore & Ohio is taking traffic from the other trunk lines at a rate which occasions intimations that its management is adopting a course calculated to create dissatisfaction and possibly open friction in the Joint Traffic Association of the trunk lines.

The items of the balance sheet which constitute the floating debt may be examined with interest. They aggregate $14,800,000, which includes $4,895,000 of loans and bills payable. To this may be added the floating debts of the Pittsburgh & Western and affiliated lines, aggregating about $2,226,000, and that contracted by the Baltimore Belt Line, which is given as $1,300,000, making a total of $18,334,000 to be dealt with in the coming reorganization of the property. Against, however, are offsets amounting to $11,357,000, including $2,369,000 cash, with $7,291,000 of traffic balances and $3,477,000 "due from other companies." How far the latter items represent transactions between the Baltimore & Ohio and its own branches and controlled lines is not stated, but the facts in this connection are calculated to reduce or improve the ultimate value of the offsets in a considerable degree.

The other items of the showing are not of a very important character. It may, however, be noted that $509,127 was expended in construction and betterments, which amount was provided in part from the miscellaneous assets of the company. It is also stated that $587,000 was charged off to represent destroyed and useless equipment, and that the capital of the company's outstanding equipment trusts was reduced $550,000, leaving due on this account $1,650,000. The bonded debt is increased in the balance sheet by $4,000,000, the amount of receiver's certificates issued.

One of the developments at the meeting was the reading of the report of Mr. Stephen Little, who was engaged last spring to make an examination of the accounts and finances of the old management. The presentation of this document had been so often postponed that an idea was naturally created that the gentleman in question had unearthed conditions parallel in character to those revealed by his famous investigations of the old Atchison Company's affairs. It was, however, stated that, while severely criticizing the bookkeeping methods of the former management for crediting assets that could not be used and underestimating liabilities, there was nothing of a sensational character in it. As the Little report was ordered to be printed, it will soon be before the public, and it can then be seen how far it will tend to reconcile the holders of Baltimore & Ohio stocks and securities to the sacrifices which they will probably be called on to make under any effective plan of reorganization.

CATTLE AND MEAT INSPECTION AND TRADE.

The extent to which the inspection of animals intended for food is now resorted to manifests a marked advance over previous conditions. The number of ante-mortem inspections of cattle, sheep, calves and hogs here during the fiscal year was 35,917,479, an increase over the previous year of more than 12,000,000, or over 50 per cent. The total number of post-mortem inspections was 23,164,858, an increase of 25 per cent. over last year. The cost of inspection, tagging, etc., was less than one cent for each ante-mortem inspection, which covers the expense of all inspection work, including post-mortems. The cost in 1895 was 1.1 cents; in 1894, 1¾ cents, and in 1893, 4¾ cents. The total number of abattoirs under inspection in 1896 was 102 in 26 cities; in 1892 there were but 28 in 12 cities. These figures are taken from the annual report of the Secretary of Agriculture, who says that for the sake of economy the exports of microscopically inspected pork to countries not exacting such inspection have been greatly discouraged. The total amount thus inspected was in round numbers 23,000,000 pounds, of which 21,500,000 pounds went to countries requiring inspection. The cost was 6.18 cents per specimen; in 1893 it was 8¾ cents. Clearances were issued to 819 vessels carrying cattle and sheep. Of cattle there were tagged for export 377,639, and 422,603 inspected sheep were exported. The percentage of loss in transit was considerably less than ever before. Secretary Morton urges strongly that government inspection should be extended to all animals intended for human food, whether for consumption in the United States or abroad, but he maintains that the cost of this inspection should be paid by the packers, the value of their product being directly enhanced by such inspection and certification.

The large share of the United States in the import cattle trade of Great Britain prompts an extended reference thereto. It appears from the figures given that the total consumption of meat in Great Britain for the year covered by the report was 1,100,000 tons, 75 per cent. of which was produced at home, the remaining 25 per cent. being imported. Of live meat arriving in the United Kingdom during the first six months of 1896, the United States supplied 75.10 per cent. of the cattle and 45.26 per cent. of the sheep. Of cattle Argentina furnished 15.50 per cent. and over 50 per cent. of the sheep. The testimony of the department representatives abroad is that the cattle from the United States arrive in English ports in excellent condition. The Glasgow market is especially commended to American shippers, as in that city cattle from the United States compete with the very highest quality of British animals. American packers are not, it seems, participating in the profits of the growth in consumption of swine flesh and hog products in Great Britain as much as they ought to, because they do not cure meats to suit the British demand; on the other hand, Danish and Canadian packers are increasing their shipments every year. American bacon averages about two cents per pound below Continental and Irish bacon, and about three cents below English. The Secretary says that American bacon will bring a better price in the English market when it is prepared with a view of meeting the tastes and demands of English people, but that to-day American packers merely dump their overflow product upon the English market for what it will bring and leave the higher prices to English, Canadian and Danish packers. On the other hand, American hams are held in higher estimation than bacon, and hold their own in competition with all other countries, so that in quantities shipped and in prices hams and pickled pork from the United States are equal to the same products from other countries.

STATISTICS OF NON-EMPLOYMENT.

The most recent special report, based on material gathered for the Eleventh Census, which has been prepared by Commissioner Wright, deals with statistics of occupations, and particularly with statistics of the unemployed. The census bulletin dealing with the occupations of the people, which was issued last year, brought out the fact in effect that almost half the total population of the United States over ten years of age was to be classed as working people. The total working population in 1890 was shown to be 22,735,661, or almost 48 per cent. of the whole number of people ten years of age and over. Of these 18,820,950 were males and 3,914,711 were females, and the numerical increase in persons engaged in gainful occupations during the ten years since the preceding census was shown to be 5,343,562, of whom 4,076,008 were males and 1,267,554 were females. The special report just submitted by Commissioner Wright carries further the work begun in the first bulletin, and presents details upon a number of points. For example, it shows for the first time in census work the number of colored persons engaged in each occupation separate and distinct from the native and foreign white elements of the population, the number of single, married, widowed and divorced in each occupation, the number who cannot read or write, or who are unable to speak English, and the number of months during the census year that each person was unemployed at his or her principal occupation.

As has been intimated, however, the most interesting information collected in the report relates to the unemployed. Similar data relative to the unemployed were collected in the census of 1880, but were not compiled, so that this is the first time in the federal census that information of this character has been presented in connection with the statistics of occupation derived from answers made on the population schedule. The figures show the aggregate number of persons unemployed for different lengths of time and, to a great extent, probably at different times during the census year from June 1, 1889, to May 31, 1890, but they only show the number unemployed and the time of non-employment with regard to the principal occupation in which those reported upon were usually engaged, and upon which they depended chiefly for a livelihood. The lack of figures for the net period of non-employment, after making allowances for the time when not engaged at their principal or usual occupation, during which their services may have been utilized at some other kind of work, appears to be owing to the failure of the census enumerators to gather complete enough returns to warrant compilation. Of the total number of persons engaged in gainful occupations, viz., 18,821,090 males and 3,914,571 females, 3,013,117 males and 510,613 females, or a total of 3,523,730 persons, were unemployed at their principal occupations during some part of the census year ending May 31, 1890. Of the whole number of persons so unemployed, 1,818,865 were unemployed from one to three months, 1,348,318 from four to six months and 336,447 from seven to twelve months. This is equivalent, approximately, to 1,139,672 persons unemployed at their principal occupation for the entire twelve months, and this number would represent 5.01 per cent. of the total number of persons engaged in gainful occupation in 1890. Divided as to sex, the approximate number of males unemployed at their principal occupations for the entire census year was 972,000, representing 5.16 per cent. on the whole number of males at work, while the approximate number of females unemployed at their principal occupations during the

same period was 167,672, representing 4.28 per cent. of the whole number of females at work. Seemingly, therefore, the employment of women engagaged in gainful occupations was more constant than that of men.

INDIA AND THE LONDON MONEY MARKET.

After experiencing a continuance of easy money for two years, during which the Bank of England discount rate was never above 2 per cent., the open market rates being steadily under that figure, the London money market is now firm in tone, if not positively stringent, the bank rate being up to 4 per cent., while in the open market discount has for some weeks past ranged from 3½ to 3⅞ per cent. This situation is not without its effect on the financial and speculative markets on this side of the Atlantic. The firmness of money has naturally checked speculative activity on the part of the British public and arrested the disposition to purchase American securities which made its appearance when the sound money cause triumphed in our recent election. In addition to this, the fact that money is now relatively much more plentiful here than there, and that bankers and others can find employment at home, and at remunerative rates, for available funds, has compelled a certain amount of calling in of balances and maturing obligations here that accounts in a large degree for the present firmness of our foreign exchange market. As yet this tendency does not lead to expectations of gold shipments to Europe. It is, indeed, permissible to conclude that with the existing superabundance of funds here, and particularly in view of the great amount of gold that has been released from the hoarding to which it was subjected during the period from the time of the Chicago convention to the election, our market could stand moderate gold withdrawals with little effect, even of a sentimental nature.

London's financial authorities, however, are almost unanimous that the money market there will continue on a higher level than that to which it has of late been accustomed for an extended period. This is based partially on the expectation that the Russian currency reform is to be carried out and that the Czar's government will effect arrangements resulting in the withdrawal of considerable specie from the Bank of England. As has been noted in these columns, very contradictory notions prevail as to the precise course of the Russian financial authorities in the matter. It has been asserted that during the Czar's visit to Paris representations that the time was inopportune for the preparations incident to carry out M. de Wille's scheme were made by the French Cabinet, and that the advice of its ally has resulted in a postponement of the plan for the present at least. As all branches of the Russian government are accustomed to work by secret rather than open methods, the above view of the situation must be taken with some allowances, and it would seem that the fears of the London market and the evident purpose of the Bank of England to maintain rates for money are, in a measure, a reflection of the idea that London may be called on to supply the gold needed at St. Petersburg to make the contemplated return of Russia to a specie currency and a gold basis an actual fact.

It is, however, India and the Indian financial situation which seem to be more directly responsible for the advance in the English money market. This is explained in the latest issue of the London *Statist* that has come to hand in the following words: "The financial position in India is becoming strained. The Bank of Bombay has further advanced its rate from 6 to 8 per cent., which is also the rate in Bengal. The sharp rise in the value of money is due to the heavy drain of cash into the interior for the purpose of moving the indigo and cotton crops, and in consequence of the government having been obliged to send money to the distressed districts. With this outflow of cash the reflux of money in the shape of taxes has been exceptionally small. The government is unable to press for the payment of taxes, and it has, indeed, remitted a considerable portion of the land revenue, and the consequence has been that the cash held, both by the government and banks, has been seriously depleted. With the demand for cash for the interior still going on, and with the prospect of further heavy demands in connection with the movement of the rice crop in Burmah at the beginning of the year, the value of money in India may rise to an abnormally high level. It is true that the government cash balances have, in previous years, been not lower than they now are, but the conditions and outlook at the present time are exceptional, and the present cash balances are exceedingly small, in view of the possible drain upon them. No one can yet tell what the demands upon the resources of the government will be, nor how much the government revenue will be affected by the famine. Should the famine be as severe as is feared, and the relief that has to be given be large, the government's cash balance is much too small. Moreover, the government has placed important contracts for railway construction, and it must find the means with which to carry on the work."

The same authority points out that at the end of July the cash reserves of the Bank of Bengal were 508 lacs of rupees, but at the date of the article from which quotation is made (November 14) they had been reduced to 220 lacs, while those of the Bank of Bombay had in the same period fallen from 340 lacs to 115 lacs, a decrease of 848 lacs for the two chief banking institutions of British India. In the same way, between July and October the drain on the reserves of the Indian Treasury's reserve reduced it from 1,563 lacs of rupees to only 970 lacs, the depletion being generally thought to have become still more marked since the last return was made public.

In view of this situation, the Indian government has reduced its offers of Council drafts with the effect of forcing up the rate of India exchange in London, the bids for the Council tenders a fortnight ago having been as high as 1s. $3^{27}/_{32}$d. per rupee. It is not unlikely that the government will reissue £2,000,000 of sterling bills that were retired in London last spring, with the privilege of reissuing them, while its cash requirements for gold to meet interest payments in London for the balance of the year would, even with this insistence, still be to the extent of £3,400,000. In view, however, of the uncertainty of the stress that the famine may put upon the resources of the government, it is considered quite likely that it will have to come in the London market as an extensive borrower.

This raises interesting questions both as to the transfer of gold to India and the relations of the Indian government to the silver market. The *Statist* says, on this latter point: "In old times, if there were a serious scare, the exchange banks could pour silver into India and get it coined as rapidly as possible. Now the exchange banks can only import gold and secure rupees. In case of scare the India Council could not sell bills very largely, inasmuch as the Treasury balance would be too small for the purpose. We have strongly urged upon the India government and upon all interested in India trade to watch closely the movements of the Treasury balance and of the bank reserves. We have pointed out that if the Treasury balance rapidly decreased it would become the duty of the India government to buy silver in time, so that it might be able to have it coined and to protect the country from a panic."

In another place the same journal expresses this idea in even a stronger form. It says: "Should the monetary position in India become more strained, it is possible that the Indian government may be compelled to purchase a considerable quantity of silver for coinage into rupees. Should exchange rise to over 1s. 4d. and gold be sent to India, the gold would be sent to the Treasury and exchanged for rupees, and it may become necessary for the government to coin a considerable quantity of rupees to meet the demand. The inquiry for silver for trade purposes in India is now very slight, and it would appear that the recent purchases have been partly on the idea that the government may sooner or later be compelled to buy silver for the cash needs of the country."

A POSSIBLE BUSINESS CRISIS IN BRAZIL.

The editor of the Rio *News*, who has been a careful and appreciative observer of affairs in Brazil for many years, says in a late issue of his paper that he cannot escape the conclusion that "this market is on the verge of a great financial crash." Misgovernment is bluntly declared to be at the bottom of the trouble and still blocking the way "to an honorable liquidation." It is the old story of expending three while the income is only two, which dangerous and dishonest practice has been going on for the last six years. It is explained that unnecessary and reproductive expenditures are going on all over Brazil, and that the routine business of the government is poorly managed, even at the maximum of expense. But this is not the worst. It is even declared there is not a single public service which is managed efficiently and economically, while "every revenue department is simply honeycombed with frauds and impositions." The Brazilian paper named adds that the crisis must now be met intelligently and courageously as it is foolish to conceal facts and fatal to temporize. If the Brazilian government does not adopt measures soon to mitigate the hardships which must result, "then the business community must take its own precautions. It should at once petition Congress not to adopt the suicidal expedient of issuing more currency, for that will surely serve to depreciate its value still more. And it should also protest vigorously against any further increase in taxation at the present time, as this will serve to increase prices and augment the distress already severely felt by the people. Instead of further increasing the cost of beef, bread, salt, kerosene, clothes and other necessaries of life, the authorities should seek to remove every tax and restriction that can be spared," that the cost of living may be speedily decreased. If the authorities are not wise enough to act voluntarily, the business men are advised to "offer them instruction," so that in case the tax on future exchange operations, which offer protection for the importer as well as profit for the speculator, is insisted upon, importers may unite and place transactions on a gold basis. After arranging to sell at gold prices and exact payment in gold or its equivalent on the day of payment, if the stamp tax is to be made obnoxious, "then let them also reduce business to a cash basis." It is pointed out that if the Brazilian merchants choose to organize and insist upon fair treatment, "they can easily bring the government to terms, for it is to them that the Treasury looks for the principal part of its revenue."

Interest is added this view of the impending financial crisis in Brazil by the fact that the editor of the Rio paper quoted is of American training, and that his publication during the recent Brazilian rebellion breathed so much of the northern idea of telling the truth at all times as to receive the distinction of being officially suppressed for some weeks. Even now the Rio *News* appears to keep its contemporaries and others well aware of its existence, as the following editorial paragraph from its columns indicates:

> The crusade of personal denunciation and abuse against the editor of this paper inaugurated by the *Jornal do Commercio* and echoed by the jacobin press, has come to an ignominious end. It failed to compass our expulsion from the country, or the wrecking of our office by a mob, and it likewise failed to sustain the accusations so recklessly made in the *Jornal do Commercio*. It proved one thing, however, that the editor of the *Jornal* made a capital mistake in losing his temper and in making charges which he could not sustain and which every fair-minded man knew to be absurd.

Evidently something has been done, since the substance of the foregoing was published, late in October. A Washington dispatch says that an instructive object lesson in government control of railways has been developed by the debates in the Brazilian Congress growing out of the bill to lease the Brazilian Central Railway to a foreign syndicate.

The Central road, with its branches, covers 500 miles of the best coffee-producing districts in the republic. The main line extends from Rio Janeiro, on the north, to St. Paul, in the south, with an important branch west to the state of Minas. The road was built some years ago by the government, at an expense of $150,000,000, and earned for a time an income of $16,000,000 annually, several millions of this being clear profit. Of late years employment on the road has been given as a reward for political activity, the partisans of one party succeeding each other with the various changes of administration. In many cases the salaries were largely disproportionate to the character of the service performed, while in nearly every case, except where experts were employed, the appointees were unfit for their places.

The debates in the Congress which disclosed these facts also showed conclusively that the road, instead of being a paying investment, is steadily losing money at the rate of $2,000,000 a year. Through the new President, Senhor Pereira, the unsatisfactory service of the road was brought to the attention of Congress, with a strong recommendation that it be placed in the hands of private parties. It appears that a syndicate has been formed in London which will pay the Brazilian government $90,000,000

for a ninety-year lease of the road, the latter, with all improvements, to revert to the republic at the end of that period. The syndicate is entirely satisfied, from an examination of the road, that not only will its earnings enable it to pay the Brazilian government $1,000,000 a year for the use of the road, but that it will still leave a handsome profit. "The bill has already passed the lower House and is now in the Senate, where, late advices from Rio Janeiro state, it will be also favorably acted upon."

As a result of its passage through one branch of Congress, the rate of foreign exchange has already materially decreased. "It is believed, if the pending arrangement is satisfactorily concluded, that all the other roads in Brazil, now operated by the government at a loss in consequence of political manipulation, will also be leased to private parties, either in the republic or in Europe."

THE COTTON INDUSTRY IN ENGLAND.

Manchester, November 16.—The Board of Trade returns for October respecting our total shipments of cotton piece goods show a falling off, as compared with the corresponding month in 1895 and 1894, but the exports for the ten months ended 31st ultimo are larger than in the same period of 1895, though a little less than in 1894. Subjoined is our usual table:

	——Yards——	
	October.	*Ten months ended Oct. 31*
1896	419,048,900	4,391,075,200
1895	442,847,200	4,204,361,500
1894	485,508,700	4,430,970,600

The principal instances of increase this year so far, compared with the same ten months of last year, are:

	Yards.
Bengal and Burmah	190,000,000
Bombay	109,700,000
China	46,200,000
Japan	17,000,000
Germany	15,700,000
Australasia	8,200,000
Peru	7,500,000
British possessions in South Africa	6,300,000
Belgium	5,000,000
Philippine Islands	5,100,000

The instances of lessened takings in the same period are:

	Yards.
Turkey	52,300,000
Madras	42,500,000
Chili	34,000,000
Egypt	17,700,000
Central America	16,400,000
Italy	14,600,000
Morocco	13,000,000
Persia	11,000,000
Straits settlements	10,300,000
United States	9,100,000
Brazil	7,500,000
Ceylon	4,000,000

Though the shipments to India continue on a fairly liberal scale, very few orders of importance have been given out to manufacturers during the month under review. Producers in east and northeast Lancashire have relieved themselves somewhat by taking extremely low rates for fine goods, but, as matters stand, makers of cloths suitable for our dependency in Blackburn, Darwen, Accrington, Great Harwood, and the outlying districts, are lighter under contract, we should say, than for a considerable time past. There are looms standing idle, and at the moment there seems no likelihood of them being refilled with warps. India merchants in Manchester consider the outlook in India as very gloomy, owing to the impending famine in food grains. Leading houses have this week received trustworthy telegrams that piece goods are declining, orders behind time are being canceled, and generally the demand for distant delivery is most disheartening. Undoubtedly things look very bad for Lancashire, and it is feared that if there be no November sowings the position of affairs next spring will be very bad indeed. In the meantime, manufacturers are receiving numerous small orders from the minor and nearer outlets. The continental inquiry has not been unimportant, but it is not nearly sufficient to keep looms at work. The printing-cloth trade in Burnley and Glossop continues depressed. A fair proportion of the looms in the great weaving center of Burnley is stopped. Calico printers consequently are having a bad time. More business is expected from China, as usual, at this time of year. Buyers in Shanghai seem to be putting off operating to a later period, and it is thought that before the year closes there will be more doing for China and the far East. Speaking broadly, manufacturers seem to be in for a bad time. Not only is the demand from abroad discouraging, but yarns are going against users. The supply is far from being plentiful. Consequently manufacturers have to pay full rates for anything required, though they can only sell cloth by taking extremely low prices.

Our total shipments of yarn keep up very well, especially to India. We give in the following table the figures for the last three years:

	——Pounds——	
	October.	*Ten months ended Oct. 31.*
1896	21,212,700	267,282,600
1895	22,683,700	213,173,100
1894	22,520,000	195,008,100

It will be seen from the following particulars that our eastern dependency is taking more yarn from us:

	——Ten months ended October 31——		
	1896.	1895.	1894.
Bombay	13,163,600	11,133,700	10,938,600
Madras	13,275,500	9,727,400	10,452,700
Bengal and Burmah	16,235,600	14,982,100	11,088,800

Turkey shows a falling off, viz., 14,124,000 pounds (1896), 16,719,700 pounds (1895), and 20,332,000 pounds (1894). Egypt is doing badly. Japan is doing well, viz., 20,709,500 pounds (1896), 16,357,500 pounds (1895), and 13,196,400 pounds (1894). An examination of the official returns will show that silver countries are increasing their takings of yarn from this country.

Lancashire spinners of all kinds seem to be doing better than for some time past. As previously pointed out here, the great reduction of spindles during the last few years is now telling upon the supply and demand. While more looms have got to work, spindles have gradually decreased from one cause and another, and to-day the margin is wider by ¼d. per pound as compared with twelve months ago, and the tendency is for the position of spinners to improve. At the moment, cops made from American cotton are strong, owing to the daily demand. Stocks are lighter, and order lists are heavier. The same remark applies to shipping yarns. Bolton spinnings are also better than they were a couple of months ago. Altogether, the various kinds of yarn are well sold, and the prospects are certainly more cheerful, if only the present looms can be kept at work or increased.

With regard to the growing American cotton crop there is scarcely anything fresh of a trustworthy character. Mr. Henry Neill still holds to about 9,000,000 bales. Other estimators put the figures lower. In the meantime spinners in this country have been buying more freely, and if the feeling of users in Lancashire can be gauged, the tendency is for a "bullish" feeling to prevail. That is to say, spinners are more disposed to hold stocks of the raw material than to run short. The Egyptian cotton crop is expected to be about 5,500,000 of cantars. The East Indian crop will, undoubtedly, be affected by the want of rains.

T.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

It would seem that the commercial policy of Japan in Corea, to judge from the report of the Söul correspondent of the Japanese newspaper *Shogyo*, had been defective. Japanese peddlers and traveling merchants in Corea have evidently been pluming themselves on the success of the Japanese over the Chinese in the late war, and in an effort to get rich as quickly as possible, irrespective of the means employed, have suffered the usual consequences. The correspondent of the newspaper named writes that the Japanese peddlers who flocked to Corea have been in the habit of calling on the head men of towns, compelling them to act as their agents and furnish them lodging and refreshment. They would also quarrel with native merchants, and from their ignorance of the manners and customs of the people, would shock the Coreans. Some did not scruple to pose as medical practitioners, and "in that way extort money." Many "prowled about the country," pluming themselves on the victory Japan had won over China, which "created a very bad impression of the Japanese as a nation in the minds of the simple folks in the interior, the result being that the credit of Japan, and especially of Japanese peddlers, is entirely gone." The unpopularity of the Japanese, "traceable to the sale of the shoddy goods," is said to be even more striking. Hotan is a most popular drug in Corea, but in Ninsen alone three Japanese establishments made spurious hotan. The natives were at first imposed upon and bought the counterfeit article at the regular price, but the "knavery was soon discovered," and the result is, the reputation of the once popular drug is gone. As if to complete the discomfiture of Japanese drugs and drug-sellers in Corea, "foreign missionaries are now furnishing genuine medicines gratis," and the contrast between foreign and Japanese drugs, "both in price and efficacy, has entirely deprived the latter of what popularity they formerly enjoyed." The situation with respect to Japanese cigarettes is no better, the trouble arising from the same cause, which is the more regretable because the Coreans are addicted to smoking, and, owing to the failure of the tobacco crop, "there must be a large quantity imported." Matches made in Osaka are in the same category, and the Coreans are using matches made in China.

In spite of the rigid provisions of the Chinese Exclusion act, Chinamen still continue to come into the United States. According to the report of the supervising special agent of the Treasury, during the fiscal year 3,510 Chinese were admitted and 415 rejected. One hundred and ninety-eight were arrested for violating the law and 120 were deported. During the year 936 laborers of that nationality left the United States and 106 returned. The enforcement of the Exclusion act cost during the year $86,856. Recommendations are made looking to additional stringency in the Exclusion act by the requirement of witnesses other than Chinese in all cases where proceedings are taken affecting the rights of the Chinese to enter or remain in the United States, etc. The report shows that opium smuggling has decreased largely during the past year as a result principally of the reduction of rate of duty from $12 to $6 per pound. At the same time a marked decrease as compared with 1895 has been noted in the amount of Chinese opium imported at San Francisco. The report calls attention to the fact that the opium smuggler is operating in other fields where his profits more amply repay the risk. The report suggests a further reduction of the duty on opium to $1 per pound.

CURRENT BUSINESS NEWS.

Industrial.

Messrs. A. A. Goodrich & Co., of Detroit, Mich., have received an order for 2,000 tons of charcoal pig iron from Budapest, Austria. The iron will be used in the manufacture of car wheels. This is said to be the largest order for that material ever received for export by any American firm.

The Ohio Iron Company's furnaces and rolling mills of Zanesville, Ohio, the largest iron works in eastern Ohio, have shut down. Lack of orders is given as the reason for the stoppage.

In order to secure coöperation some of the members of the Populist party of Kansas have taken an option on a tract of land in Crawford county, Kans., comprising about 2,000 acres, where they propose to found a colony and start a farming industry, a mining camp, several factories, and a general store. The scheme is to take unemployed men into the colony, and allow them to become part owners of the property, paying their proportion out of their shares of the earnings.

Factories Nos. 1 and 3 of the Sanford Woolen Mills, in Sanford, Me., which have been idle six months, will start up on full time Monday. These mills employ about 1,000 operators.

The Rhodes Bros., Limited, at West Branch and Llewellyn, who went into the hands of receivers early in July last, have effected a settlement with their creditors, and their entire plant has started up on full time, thereby giving employment to 400 or 500 people.

The Chattanooga *Tradesman* says: "It is too late in the season for the iron business to experience anything like a boom, but a steady demand is expected. The movement in southern iron is active. The Sheffield (Ala.) Coal, Iron & Steel Company reports a sale of 400,000 tons of pig iron, at an advance of 50 cents per ton over October prices."

The Tennessee Coal, Iron & Railroad Company "has also booked another order for 2,000 tons from a firm in Liverpool, England."

The Pennsylvania Window Glass Workers and Manufacturers' Committee on Wages have agreed to the old scale, and "the fires will be lighted on December 14, after five months' idleness."

The Philadelphia *Ledger* says: "One by one the manufacturing and industrial plants that depend on the power of Niagara Falls for their motive force are being opened. It is evident that the calculations on which plans were made for utilizing this enormous natural force were not in error, and the power that has been wasted for thousands of years is now being harnessed to do work which could not be done so well or so cheaply without it."

The wire nail trust has dissolved and will "wind up its affairs December 1." Sales agents representing mills within the pool have since been selling nails at $1.70 per keg in Chicago, $1 per keg below the late circular price, and jobbers have been selling in lots of from one to 10,000 kegs from store at $2 per keg. The price is expected to be down to $1.25 per keg soon, or within 30 cents of the lowest price they ever sold in Chicago.

President M. D. Ratchford, of the United Mine Workers, has announced that he had succeeded in restoring the 61-cent rate in eastern Ohio, and that all mines along the line of the Baltimore and Ohio, from Bellair as far west as Glencoe, would resume on full time.

A Houghton, Michigan, dispatch says that it is practically assured that the deal consolidating the Portage, Huron, Isle Royal and Sheldon and the Columbian copper mines, in that city, will be closed. These mines have been closed for from five to twenty-five years. "A million dollars of eastern and European capital will be put into them and between 700 and 1,000 men given employment."

A Cleveland dispatch says that a contract has been made by Andrew Carnegie for the construction of a big ore and coal loading plant at Conneaut, Ohio, and extensive docks will also be built there. Conneaut is the northern terminus of the Pittsburgh, Shenango & Lake Erie Railroad.

Commercial.

At a recent meeting of the California Miners' Association a resolution was adopted recommending the appointment of a Cabinet officer to be known as the Secretary of Mines and Mining.

It is announced that the Erie Canal will close at noon, December 1, 1896.

A special train of fourteen cars, containing two hundred head of choice beeves for export, has been shipped from Richmond, Ky., to New York. They are to be exported from New York by express steamer, and will be on sale for the Christmas holidays in the markets of London.

The Philadelphia *Press* says: "At the steel rail meeting in New York, it is believed it was tacitly agreed to maintain the present rate of $28 per ton, if possible. Consumers of steel rails regard the prices as exorbitant, as compared with prices in other departments of the steel industry. The fact that a much lower price is demanded for steel rails for export by American manufacturers is much dwelt upon. Recently heavy steel rails in England have been quoted at $22.50 at the ports. The following table shows the consumption of steel rails in this country since 1891:

	Consumption.	*Railroad mileage.*	*Tons per mile.*	*New mileage.*
1891	1,296,190	170,795	7.5	4,089
1892	1,544,269	175,233	8.8	4,438
1893	1,119,470	177,862	6	2,629
1894	1,008,516	179,812	5.5	1,950
1895	1,307,378	181,612	7.2	1,800

The Philadelphia *Ledger* says: "There is value in the statement that the farmers of North Carolina paid nearly $3,500,000 for commercial fertilizers last year. It shows that the state is waking up to its agricultural possibilities."

Market reports on Tuesday said: "Another item of great strength was the Liverpool estimate that the United Kingdom and continent of Europe would require from this country 17,000,000 bushels per month until July 1."

The showing made by the port of New Orleans for October in the export line "was a most favorable one, as the net increase of value in exports this year over last is $8,019,486."

A call has been issued by Secretary W. G. Markham for members of the National Wool Growers' Association and representative wool growers of the United States to meet at Washington, December 15, to consider the memorial to Congress adopted by the Farmers' National Congress at its session in Indianapolis, November 10 to 13, asking that the Dingley tariff be amended so as to provide that the skirting clause of the act of 1890 should not be applicable thereto; that the provisions for its continuance until August 1, 1898, should be stricken out; that prohibitory duties shall be imposed on woolen rags, shoddy, etc., and that wool and woolen manufactures shall not remain in custom warehouses more than ten days. It also favors an extra session of Congress, and asks for a wool tariff, as recommended by the National Wool Growers' Association at its session in Washington, D. C., in December, 1895.

A Cleveland dispatch says that before the beginning of the new year a big corporation will be formed, embracing practically all the sandstone quarry interests of the United States. "It is estimated that a saving of 10 per cent. will be made in operating expenses alone. The capital will be $5,000,000, and the intention is to buy up all the small quarries not in the combination."

Financial.

The following securities were sold at auction this week at New York:

10 Shares Real Estate Exchange and Auction Room, Limited, $100 each	80%
$5,000 Detroit & Bay City Railroad first mortgage 8 per cent. bonds, 1902	117¾
50 Shares Standard Gas Light Co. preferred	119⅛
5 Shares Standard Gas Light Co. common	85¼
$5,000 Richmond & West Point Terminal Railroad 5 per cent. consolidated mortgage trust certfs.	$1,200
50 Shares Chatham National Bank	302½
45 Shares United States Casualty Co	118
50 Shares National Butchers' & Drovers' Bank	131
12 Shares Mercantile National Bank	173½
37 Shares American Exchange National Bank	173
100 Shares New York Biscuit Co	58
50 Shares Diamond Match Co. (hypothecated)	130¾
199 Shares Farmers' Loan & Trust Co	764
11 Shares Third Avenue Railroad	162
50 Shares United States Trust Co	1085-1091
$9,000 New York Suburban Water Co. of Mount Vernon, N. Y., first mortgage bonds, 1910, 2½ per cent. to October, 1900, and 5 per cent. thereafter	40
20 Shares Clinton Bank	65
25 Shares Market & Fulton Bank	225
11 Shares United New Jersey R. R. & Canal Co.	240¼
23 Shares Morris & Essex Railroad	163¼
$30,000 Lake Ontario & Riverside Railway Co. consolidated mortgage 6 per cent. gold bonds, 1926	20
4,069 Shares Lake Ontario & Riverside Railway	$100 lot
9 Shares Tradesmen's National Bank	92
$4,000 Johnson Co. first mortgage 6 per cent. gold bonds, 1914	90
5 Shares Herring-Hall-Marvin Co. preferred	32
200 Shares Porter Air-Lighter Co	5

The United States Leather Company has declared a dividend of 1 per cent. on its preferred stock, payable January 2.

The General Assembly of the Knights of Labor at Rochester last week had a rather lively session and adopted the following plank in the preamble of the order: "And that gold and silver, when so issued, shall be by the free and unlimited coinage, at the ratio of 16 to 1, regardless of the action of any other nation," and resolved: "That we call on the people everywhere to watch their representatives in Congress and demand from them such legislation as will continue the use of and issuance of government money in preference to money of private corporations" (national banks).

The London *Times* says: "The Washington government, by an abolition of certain consular fees paid by the exporters of British and other foreign goods to the United States, have reduced the total income of United States consuls in the United Kingdom by about £40,000 a year."

California's gold output this year is announced at about $18,000,000, an increase of $4,000,000 over last year.

The Treasury Department has issued a call for the redemption of United States 6 per cent. bonds, amounting to $9,000,000, face value, issued under the act of July 1, 1862, and July 2, 1864, in aid of certain Pacific railroads. These bonds are commonly known as currency sixes, and become due January 1 next.

The Delaware & Hudson Canal Company has declared a quarterly dividend of 1¾ per cent., payable December 15.

Railroads.

The Chicago eastbound tonnage for last week aggregated 65,640 tons, against 74,464 the previous week, and 74,505 last year. The Lake Shore led with 9,700 tons. Other lines carried: Michigan Central, 6,665; Wabash, 4,836; Fort Wayne, 5,592; Pan Handle, 6,973; Baltimore & Ohio, 9,075; Grand Trunk, 6,834; Nickel Plate, 5,828; Erie, 7,082; Big Four, 3,035. Lake lines carried 85,246 tons.

The Wabash Railroad Company will build five ten-wheel passenger and fifteen ten-wheel freight locomotives.

Three ten-wheel locomotives for the Burlington, Cedar Rapids & Northern Railway Company have been completed by the Brooks Locomotive Works.

The receivers of the Baltimore & Ohio Railroad Company have been authorized by Judge Morris, of the United States Circuit Court, to give possession of the Strasburg & Harrisonburg branch to the Southern Railway.

The Ann Arbor Railroad Company has engaged two extra steamers for the winter traffic between Kewaunee and Manitowoc, Wis.

A Baltimore dispatch says that the Northern Central, a division of the Pennsylvania lines, had standing on side tracks at Baltimore on Saturday 2,300 cars loaded with grain for export, and there was neither elevator room nor steamships in which to unload it.

The Roanoke & Southern Railway, between Winston and Roanoke, Va., 116 miles in length, has been sold at public auction under foreclosure of mortgage.

Because of the refusal of the Little Schuylkill and East Mahanoy railroads to accept reduced rentals, the Reading Railroad Company is to build a link between the Pennsylvania and Reading systems at St. Nicholas, Pa.

Petroleum as a motive power is to be experimented with on the Manhattan Elevated Railroad. "The system has already been used on one of the government torpedo boats and is now being put into the government tug Nina."

President Hoffman, of the Seaboard Air Line, in Baltimore recently is declared to have said that it was premature to talk of another rate war with the Southern Railway.

An electric locomotive that has been tested to a speed of 120 miles an hour has been turned out at the Baldwin Locomotive Works, working in conjunction with the Westinghouse Electrical Works of Philadelphia, Pa.

The Reorganization Committee of the Louisville, New Albany & Chicago Railway Company report that a majority for each class of bonds has assented to the plan.

Earnings of the Oregon Railway & Navigation Company, year ended June 30, 1896, compare with previous year as follows:

	1895-96.	1894-95.	*Decrease.*
Gross	$4,368,219	$5,038,307	$670,088
Expenses and taxes	3,137,340	3,396,786	259,360
Net earnings	1,230,873	1,641,601	410,728
Repairs and betterments	460,585	498,908	38,323
Balance	770,288	1,142,693	372,405

Appended is a statement showing the gross earnings and mileage for October of the Chicago & Northwestern Railroad Company for a series of years:

Years.	*Miles.*	*Earnings.*
1896	5,031	$3,309,706
1895	5,031	3,774,590
1894	5,031	2,905,333
1893	5,031	3,679,740
1892	4,273	3,304,420
1891	4,273	3,278,597

The following October gross and net earnings are reported:

	OCTOBER.			
	Gross earnings.		*Net earnings.*	
	1896.	1895.	1896.	1895.
Central of New Jersey	1,263,806	1,257,871	549,603	542,556
Cin., N. O. & Tex. Pac.	308,142	356,881	101,795	116,868
Gads. & Atalla Union	850	940	375	569
Georgia & Alabama	100,484	57,329	40,190	23,960
Georgia South'n & Fla.	80,562	79,863	27,083	35,855
Nash., Chatt. & St. L.	473,641	470,814	199,505	200,024
N. Y., Sus. & West	232,075	220,771	107,967	98,652
Northern Central	655,250	655,358	236,141	237,074

Miscellaneous.

The report of General J. C. Breckinridge, inspector-general of the army of the United States, speaks highly of the army as in as good condition in respect to instruction, discipline, equipment and supplies as ever in its history. Attention has been given to minor tactics and training in the field, which, under the present short service term, have become more pressing. He states that the growing improvement in the quality of the young men entering the army has not abated.

The proceedings of the Pan-American Medical Congress, which has been in session in the City of Mexico, terminated last week. The next meeting will be held at Caracas, Venezuela, in 1899.

Foreign.

The London *Times* concludes that "wheat values are more likely to appreciate than to decline. To a considerable extent the prices of the other native cereals will probably move in sympathy with that of wheat. So far as the bread cereal is concerned much must depend on the way in which our wheat-growing farmers supply the home markets. It would be a misfortune if English wheat-growers, who have borne the brunt of bad prices for many years, should play into the hands of traders by over-stocking the markets at so critical a juncture as the present."

Owing to the strike of dock-yard laborers at Hamburg "officials of the Hamburg-American line are diverting their freight and passenger traffic to the Bremen, Antwerp and Rotterdam companies belonging to the North Atlantic Steamship Association, which has taken all liabilities and contracts."

Some small cars propelled by motors driven by acetylene gas have lately been constructed in Italy. The charge consists of acetylene gas dissolved in fifteen times its volume of air, and with this mixture it has been found unnecessary to use water for cooling the cylinders. The method of igniting the charge has not, however, been made known. According to the *Gastechniker*, the motors maintain a speed of 600 revolutions throughout a working period of fifteen hours. The weight is only about twenty pounds, and 0.8 brake horse power is developed. The cost of working is said to be about 0.6d. per hour.

Beerbohm (London) says: "As we have frequently endeavored to explain, the wheat season of 1896–97 is entirely different from its five predecessors, which were undoubtedly years of abundance, and during which a number of circumstances combined to unduly depress the price of wheat—such as extremely low freights, excessive gold premium in Argentina, and so on; circumstances which do not exist this season. The trade, in fact, is now face to face with normal, instead of abnormal, conditions in the matter of wheat prices and wheat supplies. The supply and demand being evenly balanced as far as the entire season is concerned, holders possess power which has been denied them for years past, and it is easy to conceive a time when demand may exceed supply."

A treaty of "commerce and friendship between Switzerland and Japan, practically identical with those already concluded by Japan with Great Britain and other powers," has been signed in Berne.

Two Japanese business men visited Beloit, Wis., on Tuesday, and placed a large order for paper-making machinery with the Beloit Iron Works, to go to Japan.

The London *Chronicle's* St. Petersburg correspondent reports that M. De Witt, Russian Minister of Finance, has secured the consent of his colleagues for the introduction of the gold standard. The Czar approves this, the correspondent says, and the Imperial Council is now discussing the project and will probably adopt it, although the agrarian members warmly oppose it.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Lien—Crop—Contract—Waiver.

The Kentucky Court of Appeals held, in the recent case of Moss vs. Carl, that the fact that a contract between landlord and tenant recites that the landlord is to have a lien on the crop raised, the lien existing by statute independent of such a recital in the contract, does not operate as a waiver of the exemption allowed by the statute in lieu of provisions not on hand.

Franchise—Tax—Collection—Sheriff.

The Kentucky Court of Appeals held, in the recent case of Commonwealth vs. Bell, that where a sheriff had collected of a corporation the full amount of taxes fixed by a judgment still in force, he could not be held liable for his failure to collect a greater amount, and could not in any event be held liable for his failure to collect the tax on the franchise of the corporation, as that tax was not in the first instance collectable by him.

Insurance Company—Premiums.

The Supreme Court of Minnesota held, in the recent case of Seamans, as Receiver, vs. Christian Brothers Mill Company, that an insurance company which has not complied with the statutory requirements so as to be authorized to do business in Minnesota could not recover premiums on contracts made by it insuring property in the state, whether such contracts were made within or without the state, and that it made no difference whether such company was a foreign corporation or merely a foreign mutual unincorporated association.

Corporation—Creditors' Action.

The Supreme Court of Minnesota held, in the recent case of Flowers et al. vs. Bartlett et al., that an action under section 2600, General Statutes 1894, by a creditor of a corporation to recover the amount of his debt from the officers of the corporation on the ground that they have been guilty of fraud, unfaithfulness or dishonesty in the discharge of their official duties, is not an action for the recovery of a penalty within the meaning of section 5184, General Statutes 1894, which provides that an action for the recovery of a penalty or forfeiture imposed by statute shall be tried in the county where the cause of action or some part of it arose unless the court otherwise orders.

Railway—Minor—Accident—Negligence.

The Supreme Court of Louisiana held, in the recent case of Cronan vs. Crescent City Railroad Company, that while any want of care on the part of street car conductor resulting in injury to the passenger will make his principal responsible, yet the calling a boy passenger to the platform of the car about to reach his destination, giving a signal to stop the car, the boy being called at the right time, will not be deemed negligence of the conductor charging the carrier with responsibility for injuries to the boy by falling from the platform, or car steps, the fall being due to his own imprudence, and that a carrier of passengers will not be held responsible for injury to a boy passenger caused by his own imprudence, merely because of his age, nearly ten years.

Bank—Check—Payment.

The Supreme Court of Georgia held, in the recent case of Tomlin vs. Thornton, that in order to charge the drawer of a bank check, who has funds with which to meet the same in the bank upon which it is drawn, with liability in case the check is dishonored, the payee or holder must present it for payment within a reasonable time; otherwise the delay will be at his peril; that what is a reasonable time will depend upon circumstances, and will in many cases depend upon the time, the mode and the place of receiving the check, and upon the relations of the parties between whom the question arises, and that where the bank drawn upon is at a place distant from that at which the payee receives the check, and fails before the check is presented, it will, as a general rule, be a question for a jury, in the light of all the attendant facts and circumstances, to determine whether or not due diligence was observed in presenting the check.

Married Woman—Purchase.

The Supreme Court of the District of Columbia held, in the case of Smith vs. McNerhany et al., reported in the Washington *Law Reporter*, where a married woman, acting in her own behalf and not as agent for her husband, purchased a piano, a portion of the purchase price being paid in cash, the balance to be paid in monthly installments, to secure which she alone executed a mortgage of the piano with power of sale upon default, and, after several payments, made default, and refused to surrender the piano to the vendor, the suit being by the vendor against both husband and wife, that the purchase being made by the wife in her own name and not as agent of her husband, he could not be held personally liable for the unpaid portion of the purchase money; that the payments by the wife on account of the purchase money must be considered as admitting her as the owner, either of an interest in the piano proportionate to their amount as compared with the purchase price, or as a whole owner of the piano subject to the duty and obligation to pay the unpaid balance to the vendor, and that in such a case a court of equity will, notwithstanding the mortgage, decree the payment by the married woman of the balance due, or, in default thereof, a sale of the piano, the proceeds to be applied to such payment, and any surplus to go to her.

Contract—Lien—Assignment—Insurance.

The Kentucky Court of Appeals held, in the recent case of Morgan vs. Hymer, that in an action by a vendor to enforce specific performance of a contract for the sale of land by the terms of which the vendee, in addition to the execution of notes for deferred payments, undertook to discharge a mortgage lien on the property held by a building and loan association and was to receive a transfer of the stock in the association from the vendor, who was to keep all fines and dues paid on the stock until the purchase-money notes should be paid, the defendant having taken possession of the property, the plaintiff was entitled to an enforcement of the contract, although he had not kept the dues paid up on the stock, defendant being allowed credit for the unpaid dues, but that it was error not to require plaintiff and his wife, as a condition precedent to the enforcement of the contract, to make to defendant a valid assignment of the stock in the building and loan association, according to the by-laws and regulations of the association. The court further held that if the defendant had been ready when the last of the purchase-money notes fell due to pay the balance due plaintiff, and plaintiff had not promptly performed his part, defendant would have been authorized to consider the contract terminated, and that the house having been damaged by fire and the damage not repaired by plaintiff, who collected the insurance due on account of the damage and kept the same, although he had agreed to transfer the insurance policy to defendant, the court should have given defendant credit for the damage to the house by fire, the amount received of the insurance companies not being conclusive as to the actual damage.

Railroad—Charter—Construction.

The Supreme Court of Georgia held, in the recent case of Thomas et al. vs. Milledgeville Railroad Company, that the charter of a railroad company which authorized it to "lay out, build, construct, equip and operate a dummy railroad or roads to and from the respective depots of the railroads in the city of Milledgeville and the village of Midway, and between those and the village of Midway, the Georgia lunatic asylum, and such other points and places as said corporation may hereafter decide," would, without reference to the powers which might be implied from the use of the general words at the end of the clause above quoted, authorize the construction by such company of lines of railroad between the designated points in the city of Milledgeville and the village of Midway, or from such a point on the lines of either of said roads as it might see proper to select, either to the lunatic asylum, or to the village of Midway, or both; that the exercise of an election to construct a railroad from the city of Milledgeville to the lunatic asylum did not so far exhaust the charter power as to prevent a subsequent construction from a given point on such road of a new line to the village of Midway, and thence to the state lunatic asylum, and that the village of Midway and the lunatic asylum were, by the terms of the power thus granted, recognized as separate objective termini, and the construction of a railroad to one did not deprive the company of authority, under its charter, to construct a railroad to the other. The court further held, that where a railroad company was duly chartered and organized, and its property, as well as its corporate franchises, were afterwards legally sold under a deed of trust, either the purchasers at such sale, or their successors or assigns, without reference to their number, and without the giving of any notice to any person whomsoever, had, under the act approved December 17, 1892, power lawfully to organize a corporation for the operation of the corporate franchises so acquired by merely filing a petition for that purpose with the secretary of state; that that act did not require the petition to be verified, and under it no certificate of incorporation was necessary, but that it was otherwise as to these two particulars since the passage of the act approved December 15, 1894.

BUSINESS NOTES.

The English Hop Crop, 1896.

The London *Times* says: "This year's product of hops is estimated at 183,658 cwt. below that of two years ago. From the subjoined statement showing the estimated home production (in cwt.) in each of the last twelve years it will be seen that the present year ranks seventh in the series:

	Cwt.	Year.		Cwt.	Year.		Cwt.	Year.
1....	776,144	1886	5....	497,811	1889	9....	414,929	1893
2....	636,846	1894	6....	457,515	1887	10....	413,259	1892
3....	553,396	1895	7....	453,188	1896	11 ...	283,629	1890
4....	509,170	1885	8....	436,716	1891	12....	281,291	1888

Canada's Fruit Crop.

The London *Times* says: "This has been an unprecedented year for fruit growing in Canada. The yield of peaches and grapes has been above the average, while the yield of apples is extraordinary, thousands of barrels being dispatched to Montreal daily for shipment to England before navigation closes on the St. Lawrence. From one little station, Winona, on the Grand Trunk Railway, near Hamilton, 2,000,000 pounds of grapes have been shipped in the past six weeks. A case of fruit of different varieties grown in the Hamilton district has been forwarded to England for presentation to the Queen."

To Fix the Price of Wheat.

The Washington *Post* says: "A conference of nations on the subject of the world's wheat market is understood to be desired by at least one of the great foreign wheat-growing empires. It is stated in official circles here that Russia is particularly friendly to such an idea, and is believed to be making overtures, not only to the United States, but to England, the Argentine Republic and Australia. The idea suggested, as outlined here, is that these nations, should they see fit to unite in an agreement upon the subject, could fix a price for wheat, to be maintained uniformly through various seasons of overproduction and unsatisfactory crops, caused by drouth or continual rain, and thus make the principal grain staple upon which the millions of consumers depend for food almost as unchangeable in value as gold itself has become. This would, it is argued, enable the producer, in case of an unusually large crop, to store his wheat and obtain thereupon a loan that would tide him over until the wheat was in demand in the world's markets, when he would receive a full and fair price for it."

Steel Plant for Japan.

A San Francisco dispatch to the New York *Herald* says: "M. Oshina, technical director of the proposed steel works in Japan, and four Japanese engineers arrived on the steamer Rio de Janeiro, from Yokohama. They are on a tour of inspection of the great steel works of America and Europe, having in contemplation an order to buy a plant costing, approximately, $2,000,000. They say they will buy where they can get the best and the cheapest. The plant when finished is to have a capacity of 100,000 tons. It will be built in the coal fields in southern Japan. Both Martin and Bessemer steels are to be manufactured. 'We want to put our country,' said Mr. Oshina, 'where it properly belongs—in the van as a manufacturing nation. We will need a vast amount of steel, and do not want to depend on any other country for it.' The party will be here for several days, and will examine the manufactories of San Francisco, and then go to St. Louis, Chicago and Pittsburgh, and on to Europe. The entire trip will occupy one year."

Electric Industry in the United States.

"In the electric lighting field the total capital invested in the United States is given as over $500,000,000," says William Baxter, Jr., in *Cassier's Magazine*. "The number of plants, public and private, is over 10,000. The number of motors in use is estimated at about 500,000, and their value at about $100,000,000. The electric apparatus used in mining is estimated at 100,000,000, and the value of the electric elevator industry will probably not fall short of $15,000,000. The most important of all the electrical industries, however, is that of electric railways. In this field the investment is very great, and in the United States is represented by a capitalization of over $700,000,000. The number of trolley cars in use is said to be over 25,000, and these run on over 12,000 miles of track. The electric railways represent more than 90 per cent. of all the street and suburban railroads of the country. The aggregate of all the capital invested in electric lighting, electric railways and electric power is about $1,500,000,000, and this does not include the value of the establishments that manufacture the machinery and apparatus. As many of these are among the largest industrial enterprises in the world, and as nearly all are concerns of considerable magnitude, it is very evident that their combined capital will run up into large figures. Inasmuch as the electric light and power industry represents an investment of about $1,500,000,000 without counting the value of the concerns that manufacture the machinery and supplies, it is evident that to estimate the total investment in every department of the electrical industry at $2,000,000,000, in the United States alone, is not extravagant, for this would allow only $500,000,000 to cover the value of the telegraph, the telephone and the almost unlimited number of electrical manufactories, large and small, that can be found from one end of the land to the other."

English-American Flour Makers.

The London *Financial News* says: "In the year ended August 31 the Pillsbury-Washburn Flour Mills made some 660,000 more barrels of flour than in the preceding twelve months and 300,000 more than in the company's record year, 1891–92, when the ordinary dividends ceased. The financial troubles in the States made the business of the latter half of the year unremunerative, the net profit of £105,516 being entirely earned in the first six months. This sum suffices to pay the debenture interest and preference dividend, as well as £14,000 representing 7 per cent. interest and 3 per cent. sinking fund on the funded arrears of preference dividend. The reserve is raised from £20,000 to £30,000. The directors point out that the sums absorbed by the appropriation to reserve and by the payments on the preference income certificates represent 5 per cent. on the ordinary capital—a fact that must bring only modified satisfaction to the shareholders. The directors are hopeful that when the new waterworks are completed the water-power rents will suffice to pay the debenture interest."

Production of Colors in Glass.

The *American Manufacturer* says: "The beautiful coloring of certain varieties of glass now produced in Germany is an art practiced by the glass-blowers at the furnace, by means of an apparatus consisting of a sheet iron cylinder, twenty inches long and eight inches in diameter, standing vertically, and having a similar cylinder riveted across the top, thus forming a T-shaped muffle. In the lower cylinder is an opening into which an iron ladle can pass; and the horizontal cylinder is provided with doors at each end, the one nearest the operator being so arranged that the blowpipes can be supported when the door is closed in a horizontal split running to its middle, the object to be treated being held inside. While the glassblower is reheating his work for the last time in the furnace, an attendant takes the long-handled iron ladle, which has been heated red hot, shakes into it about a spoonful of a specially prepared chemical mixture, and places the bowl of the ladle quickly in the opening provided for it in the vertical cylinder. The mixture immediately gives off vapor, which rises to the horizontal cylinders, where, meanwhile, the blower has placed his work, supported by the blowpipe, and heated to an even red, turning it rapidly in the vapor; in a short time the object, covered with a changeable luster, is removed from the pipe and tempered like other ware in an ordinary oven, then cut, engraved, painted, or gilded as desired."

The Oil Fountains of Baku.

The rapid increase of the trade and prosperity at Baku is described in a recent report from the British consul at Batum. The town has now become a first-class maritime port. "As to the oil wells of the Apscheron peninsula, although the spontaneous flow is not of such frequent occurrence as it was two or three years ago, yet the oil is still procurable in unlimited quantities. While the consul was at Baku one oil fountain was throwing up 10,000 tons daily, and was bringing its owner an income of about £6,000 a day. It did not continue at this rate very long; but in two months it had thrown up 300,000 tons of oil, valued at current rates at about £150,000. The oil was run into two large ponds which had been prepared for its reception, and from these it was pumped as fast as the machinery could do it direct into tank steamers for Astrakhan. The shipping industry on the Caspian has assumed very large proportions in consequence of the vast trade in oil. The demand for crude oil all over Russia, and especially in the manufacturing centers along the banks of the Volga, where it is used for fuel, is enormous. Certain Russian railways use it for the same purpose, and all the steamship companies on the Volga. The merchants engaged in the great trade of Baku are Armenians, Persians, Tartars, Jews, a smaller number of Greeks, and a limited number of other Europeans, among whom the Germans predominate. There are very few Russian merchants."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Last week's disappointment at the lack of demand in general lines continues, the intervention of a holiday having made trade quieter and the volume smaller. At some points of distribution there is no change in the situation. Mild and unseasonable weather prevents a more active distribution of clothing and heavy goods, and the volume moving is smaller. Where business has been more active it is due to filling-in orders and to demand for holiday goods. Confidence in a revival of demand, which has not yet appeared, was responsible for the starting up of some mills and factories which are dissatisfied with their prospects. The most encouraging reports are of an improved tone of trade and a favorable outlook for 1897.

There have been heavier sales of wool to manufacturers at firm prices, but woolen mills have only fair orders for spring delivery. Jobbers in textiles report dry goods quieter, due to the holiday, and that jobbers, disappointed in the month's business, are looking ahead to improvement next year. A better demand for shoes for spring delivery has stimulated manufacturers to increase the output, but the request for lumber has fallen off. Iron and steel manufacturers report demand not equal to expectations and no likelihood for improvement prior to the new year. Bessemer steel remains firm at pool prices, but billets for export are off $2 a ton. Nails have dropped heavily on the collapse of the pool, and even Bessemer pig iron is shaded on decreased demand and ample supply. Cotton ties are lower, and the steel-rail pool have not decided as to quotations.

The larger number of changes in prices of staples were downward this week, petroleum, turpentine, hides, apples, cotton and wheat flour being lower, in addition to prices of metals given. Unchanged quotations are reported for wool, print cloths, leather, pork, sugar and coffee, while the leading cereals, wheat, corn and oats, respond with advances, as do prices for lead, lard and tin.

Reaction in the demand which appeared immediately after election, together with the intervention of the Thanksgiving holiday, accounts for the sharp reduction in total bank clearings throughout the country, the total for which is $940,000,000 this week, nearly 24 per cent. smaller than last week, but 7.5 per cent. larger than in the corresponding week one year ago. This week's increase, as contrasted with the last week of November in 1894, when business was unusually depressed, amounts to 16 per cent., while as compared with the corresponding week in 1893 the gain this week is 18 per cent. Carrying back the comparison to the last week of November, 1892, a year of large volume of business, the falling off in bank clearings this week amounts to 32 per cent.

There are 295 business failures throughout the United States this week, 13 fewer than last week, 7 more than in the week one year ago, 12 fewer than two years ago, and 3 less than in the corresponding week of 1892. As compared with the like week of 1892, when the volume of business was large and trade was generally prosperous, the increase this week is only 27.

Public and foreign interest in stock speculation has been withdrawn, and the professional operators in the New York market continue to attack prices, though the increased short interest acts as a check on their activity and even causes temporary rallies. The approaching meeting of Congress, and the possibility of action in regard to Cuba, or on the currency and the tariff, are regarded as the chief reasons for speculative hesitation and the restricted and dull state of the market. Bonds are lower, in sympathy with stock values. London is inactive, though money rates there have eased off. Foreign exchange is dull, but very firm, with demand sterling up to 4.86½@4.86¾. Large amounts of long sterling have been bought for investment, the ease of money facilitating borrowing on it.

Exports of wheat (flour included as wheat) from both coasts of the United States (Newport News missing) amount to 3,641,518 bushels this week, against 3,937,000 bushels last week, 2,462,000 bushels in the week one year ago, 2,667,000 bushels in the week two years ago, 2,440,000 bushels three years ago, and as compared with 4,533,000 bushels in the corresponding week of 1892. Exports of Indian corn this week amount to 2,651,663 bushels, against 2,975,000 bushels last week, 1,820,000 bushels in the week one year ago, and comparatively small quantities in corresponding weeks in three preceding years.

General trade is quiet at Toronto, owing to unfavorable weather, cotton and woolen fabrics being relatively firm. The volume of business at Montreal has been about an average, orders being light. Navigation is closed, and exporters report shipping trade at that port the most profitable for several seasons. General trade at Halifax has fallen off, owing to the holiday and to unfavorable weather. A similar report is received from St. John, N. B. Weather conditions throughout the maritime provinces generally are unfavorable to business. Total bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $17,838,000 this week, against $22,729,000 last week, and as compared with $23,372,000 in the week one year ago. In the preceding week one year ago, in which the Thanksgiving holiday occurred, the total was $19,713,000. There are 36 business failures reported from the Canadian Dominion this week, against 47 last, 52 in the week a year ago, and 35 two years ago.

FINANCIAL.

The Money Market.

Last Saturday's bank statement, given herewith, is a sufficient explanation of the course of the New York loan market. The unlocking and accumulation of funds here reflected in the heavy gain of cash holdings and deposits is duplicated at other local financial centers throughout the country, and the tendency of interior banks is to increase their New York balances. Gold continues to come into the New York banks, and the amount deposited at the Clearing House vaults has been largely augmented, while the Treasury specie reserves have grown to $128,500,000. It is stated that the Treasury officials are considering the policy of resuming the issue of gold certificates, which was suspended in 1893 when the Treasury gold first fell below $100,000,000. In the loan market itself for the past week the pressure has been entirely from institutions and other lenders to obtain employment for their funds. It may be noted that considerable amounts of sixty and ninety day sterling bills have been bought for investment, the difference between their price and the value at maturity as sight drafts being considered good interest, and very large loans are understood to have been made with such bills as collateral. The money market has taken little notice of the strength of foreign exchange, the rates being still nearly 2c. below the gold exporting point. The supply of commercial paper is better, but the growth of buying demand from all quarters still outstrips it, 4@5 per cent. being quoted for endorsed bills receivable and double names, with considerable variation and no little tendency to make concessions where desirable paper is offered. Time money is dull, and borrowers are pretty generally well supplied, while the inactivity of the stock market curtails the demand still further. Money from ninety days to four months is freely offered at 3½@4 per cent., and 4@4½ per cent. is quoted for longer arrangements. Money on call at the Stock Exchange has been easy at 2@3 per cent. for bankers' balances.

Surplus reserve	2,795,000	2,072,486	Inc.	722,514

The New York Banks.

Last Saturday's statement of averages was fairly unprecedented in the extent of the increases displayed, which furnish another illustration of the extent to which locked-up funds have come once more into the usual avenues of trade and finance. The principal change is the increase of $21,900,000 in the item of deposits, but this is of even less importance than the expansion of loans by $9,500,000. The cash holdings increased $11,286,000, this amount being made up of gains of $4,200,000 in specie and of over $7,000,000 in legal tenders. As a result of the other changes the surplus reserve increased for the week $5,800,000, the figures of the statement comparing as follows with those of the preceding week:

	Nov. 14, '96.	Nov. 21, '96.	Changes.	
Loans	$445,408,600	$454,962,000	Inc.	$9,553,400
Specie	71,968,900	76,175,400	Inc.	4,206,500
Legal tenders	65,124,400	72,204,000	Inc.	7,079,600
Deposits	454,357,500	476,205,300	Inc.	21,937,800
Circulation	20,499,100	20,331,900	Dec.	167,200
Total reserve	137,093,300	148,379,400	Inc.	11,286,100
Reserve required	113,589,375	119,073,825	Inc.	5,484,450
Surplus reserve	23,503,925	29,305,575	Inc.	5,801,650

At the corresponding period last year the surplus reserve was $19,594,950, against $66,027,600 in 1894.

Silver.

The London market for silver is firm, in sympathy with the steadiness of India exchange, and on the possibility of buying of silver by the British Indian government for the purpose of coining rupees to meet the demand for money in that country. The situation in this connection is referred to at length in another column. Bars in London advanced last Monday to 30d. per ounce, and the New York commercial price was 65¼c. Trading on the Stock Exchange in silver bullion certificates was on a limited scale, the total being 28,000 ounces, at from 65½ down to 65⅛, with a recovery to 65¼.

SILVER PRICES.

	Nov. 21.	Nov. 23.	Nov. 24.	Nov. 25.	*Nov. 26.	Nov. 27.

N. Y.	65⅛c.	65¼c.	65¼c.	65¼c.	....	65¼c.

* Holiday.

Foreign Exchange.

The market for exchange has been very narrow for the past week. Supplies of commercial bills have been irregular, but on the whole moderate in volume, while European activity in securities there is so limited that they have very little tangible influence. Inquiry from mercantile interests is slow, in spite of the influence of easy money rates here, but its place is supplied by the restriction of bankers' drawings, caused by the firmness of discount rates in London, which naturally tends to cause the transfer of balances to that side of the ocean. It is also understood that considerable amounts of long bills have been taken and locked up for investment, the understanding being that they will come upon the market at maturity in sixty or ninety days. Some estimates make the amount of such holdings as high as £5,000,000. Posted rates were marked up ½c. on Monday for both long and short bills, making the nominal figures 4.84@4.87½. On Tuesday, however, a decline in discount in London was followed by a reduction to 4.83½@4.87, although on the succeeding day demand sterling, which had declined from 4.86½ for actual business to 4.86, had a rally and closed steady for the holiday on Thursday at 4.86¼@4.86½. On Friday the market displayed great strength, demand being up to 4.86½@4.86¾, and posted rates were advanced ½c. to 4.84@4.87½.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

4.82½	4.83	4.83	4.83	....	4.83½

* Holiday.

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.87; commercial bills, 4.82¾; francs, 5.20⅝@5.18¾; reichsmarks, 94⅝@95⅜.

The Bank of England rate is unchanged at 4 per cent. The bank gained £371,000 specie, and its reserve is 53.54 per cent. against 52.53 per cent. last week. In the London open market discount is easier at 3½ per cent., and call loans are 3@3½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending November 20, 1896:

	1896.	1895.
Dry goods	$1,464,344	$2,023,879
General merchandise	7,651,492	7,150,262
Totals for the week	$9,115,836	$9,174,141
Previously reported	398,549,848	464,048,435
Since January 1	$407,665,684	$473,222,576

The exports (exclusive of specie) from New York to foreign ports for the week ending November 24, were $3,370,185 below those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$7,721,265	$7,420,408
Previously reported	342,193,242	305,609,795
Since January 1	$349,914,507	$313,030,203

Bank Clearings Totals

THE STOCK MARKETS.

The New York Stock Market.

Irregularity, with narrow fluctuations, has been the most marked feature of the week's stock market transactions. Speculation has been altogether professional, but it would seem that weakly held long stocks have been in the main dislodged, and inability to produce further liquidation, with the increase of the short interest, have made the bear leaders cautious. In fact, the room traders have several times during the week covered their short stocks and given a temporary tone of strength to the proceedings. The few features of the market were supplied by the specialties, but the larger operators acting on the bear side have made drives at a number of leading stocks, though for the reasons first given their success in depressing them was small. The general impression of the street is that material rallies are not probable, and that until Congress meets and some definite idea can be formed as to its course in connection with the Cuban situation, as well as in regard to currency and tariff legislation, no very pronounced movement of any kind in the market is likely. Furthermore, there is a belief that the reaction since the middle of the month is due to the fact that the market was only premature in discounting the favorable effects of the election, and that a renewed improvement in stock values is to be looked for after the opening of the new year. It must be admitted that the decline of the past fortnight has completely checked public interest and that commission house buying of securities is no longer a factor. London, too, has taken very little part in the proceedings, which fact is accounted for by the high rates for money there and the demoralization in Kaffirs and other mining stocks, though at the end of the present week discounts there are easier and the markets are firmer. It would, indeed, seem that London has already parted with its speculative holdings of Americans, and consequently has none to throw on this market. The firmness of our own exchange market is not a speculative factor at present, as the rates are still considerably below the gold export point and more or less effect is produced by the belief that large amounts of long bills are held for investment and will be thrown on the market at maturity, thereby supplying demand exchange at the period of the year when high rates and gold exports would be natural. The ease of our own money market has increased steadily and facilitates the carrying of stocks. Last Saturday's bank statement indicated a phenomenal outpouring of hoarded funds, while the Treasury gold reserves are, without any effort being made to increase them, approaching the $130,000,000 mark. The unsatisfactory character of railroad earnings is, of course, a discouragement, though it may be explained in the case of the grain carrying roads by the small amount of wheat remaining in the country, and more generally by the limited time that has elapsed since election and the general revival of business activity. Friday's market was dull, with the usual amount of bear pressure on certain parts of the list, though at the close prices were somewhat better, on short covering.

Sugar and Burlington have been the principal objects of trading on the Stock Exchange. The former stock was under pressure, based upon the idea that the trust may be the object of attacks in Congress, and on the closing down of the company's principal refineries for repairs. The price was depressed to 116⅝, but the short interest in it caused a rally to 117¾. Burlington has support from Boston interests, but the bear party here have attacked it, causing a decline from 79⅝ to 78⅜ on the report that earnings are not increasing to the extent that was expected. St. Paul's earnings for the third week decreased $121,000, and the stock declined from 76⅝ to 74¼ on London selling and bear pressure. Chicago Gas was also influenced by the payment of the dividend and the withdrawal of speculative support. The Leather Company's directors declared 1 per cent. on the preferred, which had advanced to 67 on expectations that 2 per cent., or perhaps, 3 per cent. would be the rate. The disappointment with the actual result caused liquidation, under which its price fell from 66⅛ to 59¼. Consolidated Gas was strong on continued rumors that an extra dividend, or some announcement of the plans for a combination of New York city gas interests, is in prospect, and as only the regular 2 per cent. quarterly dividend was declared on Friday, the price, after touching 168, reacted to 161¼. Reading was active, but was attacked by the bears and fell from 31¼ to 28¼.

General Mention.

The holders of reorganization certificates for general first mortgage bonds, general second mortgage bonds, collateral trust notes, preferred and common stock of the Northern Pacific Railroad Company, are notified by J. P. Morgan & Co. that on and after Monday next they will be prepared to begin the issue of new securities in exchange for reorganization certificates of the above classes. Only 100 schedules will be received each day. J. P. Morgan & Co. will give due notice when they will be ready to issue new securities for the other classes of reorganization certificates.

The Central Pacific Railroad Company announces that they have made arrangements to extend the $3,997,000 first mortgage gold bonds, maturing January 1 next, so that the principal shall become payable in one year from that date with interest, meanwhile, payable semi-annually at the rate of 5 per cent. The company reserves the right to redeem the bonds so extended at any time on paying to the bondholders the par value of the bonds and interest thereon at the rate of 6 per cent. per annum from January 1 next.

The right of the bondholders to avail themselves of such extension has been reserved to holders who will deposit their bonds prior to December 15 with Messrs. Speyer & Co., New York, or their correspondents in Europe. Referring to the above announcement, Messrs. Speyer & Co. give notice that they are prepared to pay a bonus of $5 on each bond of $1,000 to bondholders upon presentation of their bonds for extension under the notice of the Central Pacific Railroad Company.

TRADE FEATURES.

MODERATE VOLUME OF BUSINESS. TENDENCY OF PRICES, EXCEPT FOR CEREALS, TO DECLINE.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, November 27.—The tone of trade has ruled quiet, due in part to the holiday. The money market is dull at the close, with funds accumulating and rates tending downward. Call money closed at 3@4 per cent., with time at 4@4½ per cent. Corporation paper and city notes sold at 4 per cent., while the best mercantile names are quoted at 4½@5 per cent., with western at 5@5½ per cent. The boot and shoe trade is steady, with values firm at 10@17½c. advance from the low point on men's wear, and about 2½c. advance for women's light goods. Women's goods are quite well ordered for spring delivery, but in men's wear the spring sale is only about started. Leather is firm and quiet, with hides dull and the market ruling easier. Offerings of the latter are yet small. Lumber is firm and selling fairly.

Providence, November 27.—The increased confidence in business circles continues. As a rule there is no boom among manufacturing industries. Confidence in the future of business has, perhaps, had as much to do in putting machinery into operation as any increase in sales.

Philadelphia, November 27.—In wool and textiles business is unsatisfactory; buyers are extremely slow to place orders, and prices do not give satisfaction. Dry goods jobbers complain of the slowness of business, yet are looking with some hopes for a better era after the new year sets in. Petroleum continues moderately active; prices are slightly advanced. Morocco and leather in good demand. The larger factories are all in operation on virtually full time. There is a decided improvement in boots and shoes and also a disposition to buy in excess of immediate needs because of a feeling that the trade is going to be good. The feeling in lumber continues good, although the demand has fallen off somewhat on account of the advance of the season and buyers having completed their stock for orders which they have been holding back. The general tone of the tobacco market is much better. Demand for iron in the past week has only been fair, with indications of a stronger market, although the advanced season makes it doubtful for much activity the remainder of the year.

Pittsburgh, November 27.—The volume of business transacted will compare favorably with that in the week previous. A good demand continues for all staples, and prices are generally satisfactory to jobbers. Collections are difficult to make and do not seem to have improved to any extent during the past two or three months. No improvement is noted in the raw iron market, and few sales are reported. Prices have changed but little, and the market is firm. There is a good demand for finished material, and the mills with but few exceptions are running full time.

West and Northwest.

Cleveland, November 27.—An improved business tone and an encouraging outlook for yext year continue the principal trade features.

Cincinnati, November 27.—Business shows a little improvement.

Detroit, November 27.—Trade in general lines continues fair. Weather conditions, however, are against the movement of clothing and heavy goods. Collections are fair for the season.

Chicago, November 27.—There has been a good holiday trade with the dry goods and notion houses and a fair run of orders for general goods, not only for dry goods, but also for clothing, shoes and rubbers, damp weather having increased sales of the latter. The orders, however, continue small. Buyers prefer to order frequently rather than in large quantities. There is a falling off in the sales of light hardware, but heavy iron goods are holding their own. Calls for all descriptions of steel, and particularly for structural work, have increased, with prospects of orders being closed in the near future. Pig iron is firmly held, with a steady run of fair-sized orders. The demand for leather has fallen off, but prices are well maintained. Hides are weaker, and have declined ½c. from the top, the snap being out of the market for the time being. Building material is moving well for the season. Groceries are active. Butter, eggs and poultry are higher, but the latter declined Wednesday. Wool receipts, 105,688 pounds. The demand for loans is fair. Offerings of commercial paper are liberal. Market is easy, and collections generally satisfactory.

Louisville, November 27.—The volume of business in all lines and collections are reasonably satisfactory, there being practically no change in conditions as reported last week.

St. Louis, November 27.—The improvement continues in a healthy manner. Orders are more frequent for slightly larger amounts and for better grades. A majority of retailers are not inclined to buy speculatively, in consequence of which a gradual betterment is expected until spring, when a normal volume of trade is reasonably anticipated. Wholesalers and jobbers are also conservative and prefer to watch the result of increased production. While the weather is comparatively warm, the coal industry shows renewed strength and activity, due to the restarting of some factories and increased work among others. Tin has advanced by the recent agreement. Black sheets are in better demand, some mills being full of orders until the first of the year. Lead is active and higher. The apple market is still depressed, offerings being excessive. Banks report a rapidly increasing demand for money.

Kansas City, November 27.—Owing to the unseasonable weather, jobbers and retailers report dull trade, with slow collections. The live stock market is active, with good receipts and values.

Milwaukee, November 27.—Trade in leading lines is still rather quiet, and but little improvement is noted among the general trade. Collections are only fair.

St. Paul, November 27.—There is a noticeable falling off in trade as compared with the last two weeks, thought to be entirely due to unseasonable weather. This is not so noticeable with hardware and boot and shoe dealers. The latter are booking orders for spring shipments, and find it much easier to make sales than last season. Collections are also affected, but are still good.

Minneapolis, November 27.—Business generally is fair for the season, and collections are quite satisfactory.

Omaha, November 27.—On account of filling-in orders trade shows an improvement in all lines. Collections are easier.

Sioux Falls, November 27.—If there is any change, an improvement is noted by wholesale dealers. Severe weather has interfered with rail trade. Collections are good.

Southern Cities.

Charleston, November 27.—With the inauguration of direct steamship lines to Europe and Boston,

and increased business in wholesale and manufacturing lines, the outlook for business is bright. Collections are still only fair.

Savannah, November 27.—Trade and collections are dull. Naval stores receipts and shipments are the same as last week. A falling off is noted in prices of spirits of turpentine.

Atlanta, November 27.—Trade and collections are good.

Augusta, November 27.—Wholesale business is fair for this month, but retail trade in wearing apparel is quiet, owing to the very mild weather now prevailing. Collections, as a whole, are fairly satisfactory.

Jacksonville, November 27.—No change is noted in trade this week. Collections are coming in fairly well, and business continues to hold up well.

Chattanooga, November 27.—Dry goods men are not very busy. Hardware men are commencing the busy season. Collections are moderate. Business has not taken the active rush forward which was hoped for.

Memphis, November 27.—General trade continues fair and the outlook for spring trade is good. Collections continue satisfactory.

New Orleans, November 27.—Jobbing trade is not brisk. The weather is unseasonable. Cotton receipts continue heavy and the market active but in the buyer's favor. The sugar crop is being marketed freely but prices and yield are both disappointing. Rice is inactive but firm.

Galveston, November 27.—A slight improvement is noted in trade as the holidays approach. Collections are reported fair.

Pacific Coast.

San Francisco, November 27.—Trade in most lines is dull, owing in part to heavy rains crusing irregularity of traffic. A fair demand, however, is reported in all the leading lines of merchandise, and prices are firm.

Portland, November 27.—General business is about normal for the season, no special features being noticeable. The outlook for holiday trade is fair.

Tacoma, November 27.—A steamer has arrived under charter to load wheat for Europe. A steamer from China last week brought a large shipment of silk and leaves to-morrow with a full cargo of flour, cotton, machinery, etc. Exports of lumber continue active. Local trade is fairly good.

Seattle, November 27.—Trade in groceries is good, cereals active and advancing, hardware active, and lumber improving. The salmon pack for Puget sound is estimated at 175,000 cases. A Japanese steamer sailed with a cargo of flour, cotton, lumber, hardware, etc., valued at $146,975.

Canada.

Toronto, November 27.—Trade in wholesale circles has been quiet this week, the unseasonable weather being a drawback. There is little change in prices. Cotton and woolen fabrics are firm, and nails lower. Groceries are in moderate demand, and payments are fair.

Montreal, November 27.—No new trade features are noted. Business for the week is about up to the average. Orders from the interior are light, and there is no disposition to buy heavily at any price. Navigation is closed. The shipping trade of the port has been the best and most profitable for several seasons. Collections are fair.

Halifax, November 27.—General business is without special feature this week, and the occurrence of a holiday tends to lighten the volume of trade. Remittances from the country are about up to the average. St. John, N. B., reports business only fair. The weather conditions throughout the maritime provinces have not been favorable for some time past.

Bushels of Indian Corn Exported.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only or four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET's as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Dry Goods.

The market is more quiet, due in part to the Thanksgiving holiday, but trade is fairly steady. Cotton fabrics are quiet, although gray goods are in better shape than colored. The stock of the latter on hand is not large, and with any picking up in demand supplies should clean up well. Raw cotton has held steady and is yet above the parity of most kinds of goods. Printed fabrics are meeting with a steady sale, and bid fair to clean up. Ginghams are steady for staple goods, although the market is rather in favor of buyers at the full asking rate. Fancies are quiet and featureless. Dress woolens have met with a fair sale for spring; some goods are offered at low prices, having met with large orders. Men's-wear woolens are quiet, although through reorders and some making up of goods on speculation the spring production will average fair. Samples for next fall heavy goods are being prepared.

Wool.

The volume of trade has been larger, a line of 1,000,000 pounds of territory wool having been closed out to one manufacturer by one Boston house this week, while another house sold fully as much of Oregon and territory. The purchases of Australian wool in Boston this week was in excess of 1,000,000 pounds, while about the same amount of other foreign wool was also sold, the bulk of it being clothing grades. Prices for territory wools are firm at 33@36c., scoured, for fine medium and fine, and about 30c. for medium. Fleece wools are held very firm, but offerings are moderate and the present demand is light. Medium fleeces are firm for both washed and unwashed lots. Pulled wools are quiet but steady. Australian wools are firm and in good demand. The London sale opened Tuesday at about 5@7½ per cent. advance. Carpet wools are quiet but firm.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM NOVEMBER 14, 1896, TO NOVEMBER 20, 1896, INCLUSIVE.

THE LONDON TIMES A CENTURY AGO.

The London *Times* says: "A facsimile, produced by the photo-zincograph process, of the *Times* of November 9, 1796, was issued on Monday from the *Times* office. This is, so far as we can discover, the first authentic reproduction of an issue of the *Times* as it was known to our ancestors, the so-called facsimiles which have been sold from time to time often bearing little resemblance to their supposed originals. The public will, no doubt, be interested to see the daily fare provided for readers of newspapers at the close of the last century, and the particular issue selected for reproduction has, for more than one reason, a special appropriateness at the present moment. We need scarcely remind Londoners that on November 9 then, as now, the ancient office of lord mayor of the city of London passed into new hands. Mr. Alderman Curtis retired in favor of Mr. Brook Watson. We may not inaptly repeat to-day the words we used 100 years ago:

The anniversary of this grand city festival affords us an opportunity of observing on the conduct of the last mayoralty; and in doing so we have peculiar pleasure. Seldom has it happened that the city chair has been filled by a gentleman who has done more justice to the public and more honor to the city than the late lord mayor.

"The customary city feast is announced for the evening of the 9th. In those days the hospitality of the Guildhall ignored political distinctions. Invitations were 'sent round to gentlemen of both parties,' and there would seem to have been every prospect of an interesting, if not a lively evening from the brief statement which follows: 'It is understood that Mr. Fox will dine at Guildhall as well as Mr. Pitt.'

"Another feature of the *Times* of November 9, to which readers will doubtless turn with interest, is the address of President Washington to the people of the United States on his resignation. The fact is announced in a paragraph which, though its phraseology was, no doubt, correct at the time, reads somewhat quaintly to-day:

We are sorry to announce the resignation of George Washington, Esq., of his situation of President of the United States of America.

"The address was too long to be printed in its entirety in one number of the *Times*. The portion of it, however, which appears in the facsimile is sufficient to show the character of this historical and highly interesting document. The statesman-like insight and political wisdom of the first President of the United States impress us with remarkable force as we read his eloquent warnings and anticipations side by side with the description of American political forces at the present day, which have appeared in these columns and elsewhere during the past few weeks. With singular prescience Washington points out that among the causes which may disturb the Union—

It occurs as matter of very serious concern that any ground should have been furnished for characterizing parties by geographical discriminations, Northern and Southern, Atlantic and Western, whence designing men may endeavor to excite a belief that there is a real difference of local interests and views.

"It will be seen how far the view of the great statesman extends, including not only the lines of possible cleavage which have since resulted in events now historical, but those also which have come into prominence in our own day. They have led to an exaggeration of party spirit, which Washington foresaw would be an evil of the days to come. Party spirit he thought pardonable under a monarchy, but in states of a popular character not to be encouraged. It 'is itself a frightful despotism,' and has 'perpetrated the most horrid enormities.' The *Times* does not in this issue comment on the address further than to describe it as 'a very masterly performance.'

"A newspaper shows more forcibly, perhaps, than anything else the extraordinary developments in national life of the century now ending. We want no further evidence of the growth of industry than a comparison of the stock and share list of to-day with that now before us. It quotes twelve stocks, and is contained in six lines. In a different

sphere a similar change appears in the theatrical announcements. Two theatres only are mentioned —Drury Lane and Covent Garden. At the former Mr. Kemble and Mrs. Siddons are acting in 'King Richard III.,' and later in the night, lest the famous actress should have wrung the hearts of the audience too much, Shakespeare yields place to 'Harlequin Captive, or the Magic Fire.' To mark the growth of London itself we may turn over to the back of the paper and read, among the advertisements, of a house to let at the corner of Great Cumberland street, which commands a view not only of Hyde Park and Kensington Gardens, but of 'the Surry Hills.' The particulars of the houses advertised for sale or lease, many of them in the hands of Mr. Christie, the auctioneer, 'at his great room in Pall Mall,' contain much matter of interest for the political economist and the antiquary. Patent pills and drops give a familiar appearance to the pages of miscellaneous advertisements; but there are others which have much antiquarian interest. 'English and Irish state lotteries' are a thing of the past; and we doubt whether the owner of a rattlesnake, between nine and ten feet long, whose 'bite is attended with immediate dissolution,' would be permitted in these days to 'attend'—presumably with the snake—'any lady or gentleman desirous at their own houses.' These advertisements fill the outside of the paper, which consists of a single four-page sheet. It is numbered 3,736, and its price when originally issued was 4½d. It now costs a penny—the first copy of the *Times* ever sold for that coin. Imperfections in the type will be noticed here and there. These are, of course, exactly reproduced from the original, in which they are due partly, no doubt, to the wear of a hundred years, and partly, it may be, to original deficiencies in the type."

BRITISH IMPORTS AND EXPORTS.

The London *Times* says: "The Board of Trade returns for the past month are again satisfactory, on the whole. The imports are valued at £39,576,290, an increase of £2,716,422, equal to 7.3 per cent., and the exports of British and Irish goods at £20,654,997, a decrease of £173,869, or 0.8 per cent. As regards the exports of foreign and colonial merchandise, the value is £4,759,026, and compared with last year is £701,378 less. This heavy decrease is mainly due to the smaller reshipments of foreign and colonial wools. It is to be borne in mind that in October, 1895, the exports of British and Irish produce were much in excess of those of the previous year, and it is satisfactory to find that this year they are only £173,869 below the heavy total of last year, and are, in fact, £1,507,000 above the total of October, 1894. As regards the imports, those of food and drink, tobacco, metals, raw materials for textile manufactories, other raw materials, sundry articles and parcel-post imports are each larger in value than last year, and those which are lower are living animals, chemicals, oils and manufactured articles. Of living animals, cattle are more, increased supplies having been received from the United States, but the lower value of the class is caused by the receipts of live sheep having fallen off by nearly 100,000 in number and £168,000 in value. As to food, the higher prices of cereals will account for a considerable part of the increased value. The declared values of wheat, wheat flour, barley and oats amount to £4,021,000, compared with last year of £3,374,000, and of the difference of £647,000 as much as £521,000 seems to be due to the rise in prices. Wheat is valued at £1 8s. 7d. per quarter of 480 pounds, against £1 3s. 1d. last year. Russia, the Argentine Republic and the British East Indies each sent less of wheat, but Roumania, the United States and British North America more than supplied the deficiency thus occasioned. The quantity of Indian corn was large, and, as was the case in September, the bulk of the shipments came from the United States and the Argentine Republic. Other large increases of food are to be found in bacon, fresh beef, cheese and apples. As regards the latter article, the receipts were 1,602,000 bushels, compared with 479,000 bushels in 1895 and 1,229,000 bushels in 1894. Raw sugar is less by 188,000 cwt. and £143,000 in value, and the reduction is mainly in beet sugar from Germany. Tea is more in both quantity and value, and so also is unmanufactured tobacco. Of metals the chief feature is the demand for unwrought copper, the quantity landed being 5,572 tons, compared with 2,977 tons. The increased value of raw materials for textiles is due to the large receipt of raw cotton, and out of the total landed the United States sent 1,188,900 cwt. Sheeps' wool, on the other hand, is again less in quantity and value. Wood is also less in quantity, but is more in value, the prices of both hewn and sawn being higher. Of manufactuted articles cottons are greater in value, but silks and woolens are less, especially the latter. The higher prices of iron manufactures are reflected in the imports, for, while the quantity is less by 56,094 cwt., the value is greater by £56,066. Among the miscellaneous articles there are large increases of oilseed cake and linseed. For the ten months the imports are valued at £355,926,761, which is £15,174,179, equal to 4.4, beyond the total to the same period of last year. As regards the exports of British and Irish produce, articles of food and drink, raw materials, yarns and textile fabrics and chemicals are less in value, but living animals, metals, machinery, apparel, articles of smaller industries and parcel post are each more. Of food and drink Australasia has taken more of both beer and British and Irish spirits. Herrings are less, the quantity being 178,000 barrels, compared with 209,000, and the shipments to Germany more than account for the difference. There is only a small difference in the coal exports, but the price per ton comes out less than last year. Sheeps' wool is also less, the falling off in shipments to the United States being very marked. Both cotton yarn and textiles are less in quantity, but are higher in value, and in each case the decreased shipments are spread over many countries. As in previous months, the shipments of yarns and piece goods to the United States are much below those of last year, except jute piece goods, in which there is a considerable increase. Linen piece goods and woolen and worsted tissues are especially affected by this cause. The demand for metals and metal work is still very good, particularly as regards iron, the shipments of which were 76,282 tons, valued at £290,137, more than last year. Pig iron, railroad of all sorts, and steel unwrought are the descriptions in which the increase is greatest. Tinplates and sheets are, however, less by 9,000 tons, and, compared with October, 1894, by 16,000 tons. Telegraphic wires and apparatus were last month valued at £162,054, compared with £39,769. The shipments of alkali and bleaching materials are again less, owing to the United States taking smaller quantities. Arms and ammunition are valued at £330,716, compared with £209,929. Railway trucks and carriages and cycles show substantial increases, as do also paper, glass and seed oil. Skins and furs are, however, valued at only £43,619, compared with £124,653. For the ten months the exports of British and Irish produce amount in value to £201,091,150, which is more than last year by £13,641,847, equal to 7.3 per cent. The clearances for home consumption of currants, tea and tobacco are greater than those of last year, but those of foreign spirits, wine and cocoa are less. On page 49 of the return there seems to be a misprint, the total imports for the ten months in 1895 being given differently from the figure in the summaries at the beginning, which appears to be correct."

NO THREAD "MONOPOLY."

The Glasgow *Herald*, October 31, contained the following: "The annual meeting of the shareholders of J. & P. Coats, Limited, was held yesterday in the Merchants' Hall, Glasgow, Mr. Archibald Coats presiding. The chairman said: 'In moving the adoption of the report and accounts, I may mention that the directors view the results of the past financial year with great satisfaction, and I think the shareholders have every reason to do likewise. The net profits are larger than in any previous year, although we have had to sell at exceptionally low prices in some of our largest markets. When I had the pleasure of presiding at the first annual meeting of this company I stated that the directors had, in spite of the keen competition we experienced, the fullest confidence in the success of the business, adding, "As no amount of competition has prevented the late firm of J. & P. Coats from making good profits, we think we are entitled to hope that we shall in the same way be able to hold our own in future." I think that statement, made in 1891, at our first annual meeting, has been amply justified by the results of the five subsequent years. The important changes which have lately taken place in the constitution of our company were dealt with when we met you in this hall in July last, and we have already told you that we feel assured of their proving a source of substantial benefit. I think it right, in connection therewith, to refer to a statement which has been made so frequently of late, and which has been given such wide publicity, that it has, I believe, created considerable misapprehension. I refer to the statement that we have practically a monopoly of the sewing cotton trade of the world. To show you how entirely mistaken such a notion is, I may mention that there are in this country—outside of the concerns in which we are directly interested—more than twenty sewing cotton manufacturers of varying importance, a considerable number of whom are firms of large means and great experience in the trade. In France, Belgium, Switzerland, Spain, Italy, Germany, Austria and Russia there are over forty sewing cotton manufacturers, and in the United States we compete with two concerns of the first importance and numerous smaller manufacturers. A number of them employ in the manufacture of the articles which we produce over a thousand workpeople each, and the capital invested by our competitors in this trade must amount to a good many millions sterling. Under such circumstances there can, of course, be no question of a monopoly being obtained by any one company, or even by a combination of manufacturers. We have no monopoly, nor do we aim at having one, and, I may add, our business rests upon a more secure basis than a monopoly would be. We are in an exceptionally strong position as regards cost of production, efficient and economical distributions, and the esteem in which our goods are held by the consumer. We are thereby enabled to make very satisfactory profits with a range of prices which yields but a moderate return to the great majority of our competitors, and which does not offer any inducement to other people to come into a trade which is very keenly competed for, and in which the producing power is already ahead of the consumption. I think you will agree with me that this inherent strength of our company is a better and more secure foundation for the success of the business than a monopoly would be.'"

THE TRADE OF HAMBURG.

The London *Daily Financial News* says: "There is no question that the city of Hamburg possesses one of the finest and best-organized harbors in the world. Moreover, being a 'free port,' goods not intended for German use may be shipped or reshipped, and even landed, so long as they remain in the free port, without being subject to customs duties. These important advantages have naturally induced vessels to come to the port, and have largely contributed to make the trade what it is. In a supplementary report for 1895 just issued Consul-General Dundas gives an interesting review of the progress of Hamburg trade and shipping since it was included in the German Customs Union, which is worth attention. In 1850 the tonnage of vessels arriving by sea reached, for the first time, upwards of 500,000 tons, and in 1863 attained, for the first time, 1,000,000 tons. Nine years later, in 1872, the second million was reached, in 1882 the third, in 1888 the fourth, and in 1890, in the short interval of two years, the shortest it will be observed of the periods, the fifth million was recorded. But the pace was quickening; for four years later, in 1894, the tonnage of the sea-going ships which entered the port of Hamburg exceeded considerably the high figure of 6,000,000 tons, while in 1895 it reached 6,255,718 tons, the tonnage of vessels that cleared from the port being 6,248,875 tons. Of these figures British vessels represented 2,822,363 tons, or 46 51 per cent. of the total, which, although a decrease of 121,042 tons compared with 1894, is still some 50,000 tons more than the tonnage of German shipping, rapidly as it has been increasing of late. According to some statistics recently published, the trade of Hamburg has become so important as to place it at the head of the principal continental seaports, and fourth in rank of importance after London, Liverpool and Cardiff. Of ports in the United Kingdom, Cardiff alone has advanced in the same extent as Hamburg, Antwerp and Rotterdam during the period that has elapsed from 1888 to 1894, the increase in tonnage in each of those ports being respectively 2,283,000, 1,873,000, 1,034,000 and 1,422,000 tons. Comparing the values of the importation and exportation of the two rival seaports of Hamburg and Antwerp, the former shows its decided preëminence by the fact that its importation exceeds by £27,000,000 and its exportation by £46,400,000 that of Antwerp.

"A study of the latest tables of the volume and value of trade with all countries shows a wonderful development. The average of the importation by sea in the ten years 1851 to 1860, in volume, amounted to 14,313,160 cwt., of the value of £16,185,567, and this has increased in leaps and bounds in the four succeeding decades, till for last year alone the volume amounted to 125,498,250 cwt. and the value to £81,442,800. As regards imports from Great Britain, the figures show a steady decline in volume, but an increase in value in the five years from 1891–95, the volume having declined from 46,817,740 cwt. to 40,840,420 cwt., while the value has increased from £19,274,450 to £19,612,980. But if the British importation into Germany through the port of Hamburg shows a tendency to decline, the same cannot be said of the exportation to the United Kingdom, which has as steadily risen as the other has decreased. In the five years 1891 to 1895 the volume of the exportation has risen from 15,748,330 cwt. to 19,085,680 cwt., while the value has fallen from £19,210,547 to £19,187,071, thus demonstrating that increased production has cheapened prices. Another fact is demonstrated by a comparison of these figures with the rest of the European trade of Germany, and that is that more than half the total of the German exportation by sea to European countries finds its way to the United Kingdom. As a whole, the exports do not show such strides as the imports. The first comparison than can be made is in the decade 1871–80, when the volume of the exportation averaged 19,082,380 cwt. for the ten years and the value £9,751,200. In the next decade this was doubled, and for the year 1895 alone the volume amounted to 58,677,135 cwt. and the value to £65,528,100; thus in fifteen years the increase has been 3.7 per cent. in volume and 6.07 per cent. in value respectively. The exports to European countries by sea amounted to 29,599,230 cwt. and to Transatlantic countries to 24,395,520 cwt. last year, in both cases a considerable advance over 1894. These figures, which we have taken from the report of Mr. Dundas, sufficiently demonstrate the growth of the trade and shipping of Hamburg, and it is scarcely necessary to add that our consul-general concludes with some excellent advice to British manufacturers, of which there has been rather a plethora lately."

GOLD DEPOSITS IN THE SOUTHERN STATES.

The New York *Engineering News* says: "We print on another page of this issue an interesting account of the present status of gold mining in North Carolina. There is no doubt that gold exists in the Appalachian range in various parts of the Carolinas, Alabama and Georgia, and it is possible that these states may yet figure largely as producers of precious metals. In a recent issue of the New York *Financier*, a correspondent calls attention to the fact that the mines of the Rand district in South Africa, the most profitable in the world, produce low-grade ores almost entirely, yielding only $2.50 to $20 per ton, and require treating by the cyanide process, or chlorination, and continues:

"'In Georgia and Alabama there are miles and miles of veins carrying free gold from $2 to $20 per ton within forty feet of the surface and as many more miles carrying the quartz that contain sulphurets and by assay show $10 to $75 per ton within seventy-five feet of the surface.

"'There are also large bodies of low-grade ores in disintegrated or decomposed veins that are ten to forty feet wide and show by assay $1 to $5 per ton within a few feet of the surface.'

"It may seem that if the above showing were correct, the future gold bonanzas of the world would be in the mountain regions of the southern states; but the remarkable characteristic of the South African deposits is the uniformity with which the gold is distributed through great masses of gold-bearing rock. Does this condition also exist in the gold mines and gold prospects of the south? If it does, and if an extensive system of sampling and assaying can establish this for any given mine, its value as a gold producer is beyond question. We have never seen, however, authentic testimony that this is the case. On the contrary, our information is that the gold-bearing veins in the southern rocks are usually of small width, or if of large size carry paying ore in only a small part of their width. However, if large bodies of low-grade ore with average contents high enough to be profitable exist in the south in connection with any of the various prospects, the fact ought not to be difficult to establish.

"We may remark in this connection that the gold deposits of the southern states have been most thoroughly discussed in various papers read before the American Institute of Mining Engineers."

THE CHINESE SILK INDUSTRY.

A recent report from the British Legation in Peking says that a large increase in the silk production of China is expected in consequence of the abandonment of the native method of reeling from fresh cocoons. Hitherto the silk producers have never reared more worms than could be dealt with in the ten days that elapse between the completion of the cocoon by the worm and the appearance of the moth, as the perfect insects eat their way through the cocoons to the light and thus destroy them. But with steam filatures the cocoon is baked, or kiln-dried, so that the chrysalis is killed and the spinning of the silk can take place at any time. The increased production thereby secured in China will probably seriously influence the production in France and Italy.

BRITISH PRODUCTION OF PIG IRON.

The London *Times* says: "To some persons it may come as an agreeable surprise to learn that the output of pig iron in Great Britain for the first half of the current year places us once more in the front rank as an iron-producing country. Our total make of pig iron for the half year was 4,328,444 tons, a larger output than we have ever before attained. This output is not equal to that of the United States in the same period, but it is estimated that the American figure does not now exceed a rate of 6,500,000 tons a year, and the output for the twelve months has been estimated at less than 8,500,000 tons. As for Germany, which comes next to Great Britain and the United States, the production up to the present time justifies the belief that the total output of pig for the year will be about 6,000,000 tons. It seems reasonable to expect that at the end of 1896 our country will have fully reasserted its old supremacy.

"The most striking feature of the progress achieved in the pig-iron industry of the United Kingdom has been the increased productivity of the plant, owing to improvements of design and methods of working. Since 1871 the average output per furnace has increased by about 165 per cent., and the average consumption of coal per ton of pig iron produced has been reduced by about three-quarters of a ton."

OREGON IMPROVEMENT REORGANIZATION.

NEW YORK, BOSTON, } Nov. 28, 1896.

To Holders of First Mortgage Bonds and of Certificates of the MANHATTAN TRUST COMPANY and the OLD COLONY TRUST COMPANY, representing deposits of the First Mortgage Bonds of the Oregon Improvement Company.

NOTICE IS HEREBY GIVEN:

1. That holders of the above mentioned First Mortgage bonds depositing the same with all unpaid coupons on or before December 15, 1896, with either of the above-named Trust Companies under the Agreement of Reorganization dated May 29, 1896, will receive cash for the coupons on such bonds maturing DECEMBER 1, 1896, as well as for any coupons thereon which matured June 1, 1896.

2. That holders of the above-mentioned Certificates on presentation thereof to be stamped at either of said Trust Companies, will receive the amount of the interest maturing DECEMBER 1, 1896, on the bonds represented by such Certificates respectively.

These payments are in lieu of interest for the same period on the new bonds to be issued under said Agreement of Reorganization.

JOHN I. WATERBURY, Chairman.

General First Mortgage Bonds,
General Second Mortgage Bonds,
Collateral Trust Notes,
Preferred Stock,
Common Stock

OF THE

NORTHERN PACIFIC R. R. CO.

On and after Monday, November 30, 1896, we shall be prepared to begin the issue of new securities in exchange for Reorganization Certificates of the above classes.

One hundred schedules per diem will be received.

Due notice will be given when we are ready to issue new securities for the other classes of Reorganization Certificates.

J. P. MORGAN & CO.

CENTRAL PACIFIC RAILROAD CO.

First Mtge. Gold Bonds.

Office of the Central Pacific Railroad Co.,
NEW YORK, Nov. 25, 1896.

This Company has made arrangements to extend its $3,997,000 First Mortgage, Bonds, maturing Jan. 1, 1897, so that the Principal thereof shall become payable in one year from that date, viz.: on January 1, 1898, with interest meanwhile payable semi-annually January 1 and July 1, at the rate of 5 per cent. per annum. Principal and Interest payable in United States Gold Coin.

The right is reserved to redeem the Bonds so extended at any time, on paying to the Bondholders the par or face value of the Bonds and Interest thereon at the rate of 6 per cent. per annum from January 1, 1897, in United States Gold Coin, less such interest accrued subsequent to that date as may have been paid thereon before such redemption thereof.

The right of the Bondholders to avail themselves of such extension has been reserved to such holders as, PRIOR TO DEC. 15th, 1896, shall deposit their Bonds for that purpose with MESSRS. SPEYER & CO., NEW YORK, or with MESSRS. SPEYER BROTHERS, LONDON, or MR. LAZ. SPEYER ELLISSEN, FRANKFORT ON MAIN, or MESSRS. TEIXEIRA DE MATTOS BROTHERS, AMSTERDAM.

The extended Bonds will be stamped to show the extension, and new Coupon Sheets will be annexed, representing future interest.

Copies of the Extension Agreement can be obtained at the Company's Office and at the office of the Bankers above mentioned.

The present extension is made to the date of maturity of the latest maturing Central Pacific First Mortgage Bonds, on or before which date the Company expects to arrange a long extension of the entire First Mortgage issue.

C. P. HUNTINGTON, Vice-President.

UNTIL FURTHER NOTICE, A BONUS OF $5 ON EACH BOND OF $1,000 WILL BE PAID BY US TO BONDHOLDERS UPON PRESENTATION OF THEIR BONDS AT OUR OFFICE FOR EXTENSION UNDER THE FOREGOING NOTICE.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.—— 1896

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

SATURDAY, DECEMBER 5, 1896.

Currency reform will not lack for an organization to press it upon the attention of Congress. The conference of boards of trade which met at Indianapolis this week effected a permanent organization, and a committee appointed to present a proposition looking toward further action reported it as the sense of the conference that a general convention of the representatives of the commercial bodies of the country should be held at some convenient time and place for the purpose of suggesting such legislation as may in their judgment be necessary to place the currency system of the country upon a sound and permanent basis. It was subsequently decided to call the convention to meet at Indianapolis on January 5 next. There seems to be no doubt that the January conference will be well attended. A report advocating aggressive action by trade organizations in the direction of currency reform was submitted to the New York Chamber of Commerce by ex-Comptroller Trenholm this week, and though no action was taken upon the report it is known that the chamber will be represented at the Indianapolis conference.

Nothing has occurred to change the situation as regards the outlook for revenue legislation outlined last week. It seems to be pretty well taken for granted that no real effort will be made to pass the Dingley bill at the session which opens on Monday, but that a new measure will be brought forward probably at an extra session to be called shortly after the new administration comes into power. There seems to be a strong pressure brought to bear in favor of a thorough revision of the tariff from a protectionist standpoint, and the indications are that the advocates of this course will have their way. There will, doubtless, be a considerable amount of debate in Congress, and in the press, as is always the case when the tariff comes up for discussion, but the fact that added revenue is needed will doubtless prevent any merely factious opposition to whatever measure the leaders of the new administration may bring forward, so that Mr. McKinley and his friends will have a practically free hand as regards their revenue policy. We do not recall any time within a generation when there was so strong a disposition not to embarrass an incoming administration as is manifested to-day.

The most noteworthy event of the week was the isssuance by President Cleveland of a retaliatory proclamation ordering the reimposition of tonnage dues upon vessels from Germany. In his proclamation the President recounts the action had in relation to the matter nearly nine years ago, when, upon proof that no tonnage or lighthouse dues were imposed upon American vessels entering the ports of Germany, the President ordered the suspension of the collection of the whole duty of 6c. per ton imposed upon vessels entered in the ports of the United States from ports in the German empire, under the act of June 19, 1886. It now appears, however, according to the proclamation, that tonnage or lighthouse dues or a tax or taxes equivalent thereto are in fact imposed upon American vessels and their cargoes entered in German ports higher and other than those imposed upon German vessels on their cargoes entered in ports of the United States, so that the proclamation of January 26, 1888, in its operation and effect contravenes the meaning and intent of the act of Congress of June 19, 1886, and hence the President revokes the prior proclamation, so that the suspended duties are reimposed.

It is understood that this action of the President is based upon the results of an investigation conducted by Commissioner of Navigation Chamberlain, who in the course of his researches found that, while the imperial government of Germany as a nation did not impose any tonnage duties on American vessels arriving at German ports, the maritime states, which compose part of the German empire, do impose such a tax, in violation of the treaty existing between the two countries. The German tonnage tax now being imposed is about 6½c. per ton, or greater than the tax revoked by the President in his proclamation of January 26, 1888, and which is now revived. The proclamation will affect all vessels coming from German ports to ports of the United States, without regard to the nationality of the vessels. American maritime interests will be only slightly affected by the action of the President. The matter has, it is learned, long been the subject of diplomatic correspondence. It seems somewhat curious that it has been allowed to drift into the condition in which it is at present.

In a report just submitted to Secretary Carlisle, Commissioner-General Stump, of the Bureau of Immigration, embodies the results of his journey to Italy to urge upon the Italian authorities the importance of taking measures to restrict the emigration of Italians of such a class as will not be permitted to land in the United States. It appears that a special council composed of experts in political and social science was appointed to consider the subject, and after hearing Mr. Stump's explanation of the laws of the United States restricting immigration the council declared that immediate action would be taken on the suggestions made. The commissioner says that he has reason to believe that other governments would adopt like measures in order to lessen the deportation of their citizens in case the action of the Italian government should find favor with Secretary Carlisle's administration of the Immigration Bureau.

Mr. Stump says that he is satisfied, from general observation in Europe, that the knowledge that our laws and regulations have been strictly enforced, and a successful evasion thereof rendered highly improbable, and the difficulties of effecting an unlawful landing increased, will prevent in the future the immigration of the prohibited classes, notwithstanding the temptation which may be offered by an increase in the demand for labor attending the revival of our industries so anxiously expected with the beginning of the new year. One of the features of the commissioner's report is a translation of a proclamation by Prime Minister Rudini, in which are incorporated extracts from the United States laws affecting immigration, giving in detail the classes of people who are likely to be declared ineligible on landing, and warning them that the immigrant must not listen to the advice which may be given him by agents or sub-agents in Italy as to the manner in which he should behave before the commission. It is remarked that many immigrants who received advice in Italy had falsely declared to the commission that they had work secured in the United States, thinking thereby that they might improve their situation. They were, on the contrary, excluded as having been engaged abroad under a labor contract. The immigrant, the proclamation goes on, should always tell the truth, and the investigating commission may be counted on to act in accordance with equity and justice.

The liability of telgraph companies for mistakes in the transmission of messages was considered in the case of Ferrero against the Western Union Telegraph Company, decided this week by the Court of Appeals of the District of Columbia. It appeared, on the trial of the case, that a business house in New York telegraphed to the plaintiff that it would sell a certain product at 55c. per bushel. The telegram when received by the plaintiff quoted the price at 45c., upon which quotation the plaintiff ordered two carloads. He found customers immediately for one carload, but when he learned that the price was 55c. he refused to accept the consignment. He brought suit against the telegraph company, which, however, secured a judgment in the trial court. This judgment has now been reversed by the Court of Appeals, which held that the plaintiff was entitled to recover the actual pecuniary damage that he might have sustained through the failure to obtain the potatoes at the price at which he had reason to suppose they had been offered to him, though he could not recover the profits he would have made from the resales, because his loss was the result of his refusal to accept the consignment.

Free coinage of fractional silver seems to be indulged in to a noticeable extent by enterprising counterfeiters, judging from the statements made by Secret Service officials. A noteworthy feature of the product of these private mints is that not base metal, but silver, is used, and many of the coins which have been discovered by the government officials are both heavier and finer than the coins struck at the government mints. These facts render the counterfeits difficult of detection, the only method of distinguishing them being by weighing and assaying. The Treasury officials believe that in order to stop the fraud new dies and designs must be adopted and the present output of the mints be recoined.

Alaska receives some attention in the annual report of Governor Sheakley, which has just been submitted to the Secretary of the Interior. It is learned from this document that the mail service has been extended to the Yukon mining region, but the service has been unsatisfactory, while that to the western part of Alaska, in charge of the Alaska Commercial Company, has been prompt and efficient. Gold to the amount of $2,230,000 was taken from the mines of Alaska during the year ended October 1, the greater part of which was from low-grade ores yielding as little as $4 a ton. Naturally, the topic of sealing is touched upon, the governor declaring that the "question of the preservation of the fur seal herds of the Pribilof and other islands is one that concerns not alone the persons, or even the nations interested, but the whole civilized world, and expressing the belief that when the facts are fully known the good sense and the love of fairness on the part of the English people will fully approve of the stand which the American government has taken in the matter."

BANK CLEARINGS IN NOVEMBER.

November bank clearings reflect the revival in activity in all lines of trade following the election, but more particularly they measure the great increase in speculative activity which became manifest in the principal centers during the month just closed. Of course, November bank clearings represent to a certain extent some business which was transacted before the election, but it is probably safe to say that much of the month's good showing in clearings was a direct result of the political happenings during the first week of the month. Compared with the months immediately preceding it, November's showing is undoubtedly a good one. Only once before in thirteen years' records of clearings did the total for November exceed that for October, as it does this year. With the exception of January, in fact, the November total is the largest reported in any month this year. But in spite of all this, total clearings this year in November were smaller than in November a year ago, and were it not for the speculative activity developed during the month the showing, as a whole, could not have been nearly as favorable.

Total November clearings at sixty-six cities aggregated $4,564,307,804, a decrease from a year ago of 2.8, but an increase over two years ago of 10.3 per cent., and over the total for November, 1893, of 12.3 per cent. As showing the influence of speculation at New York in expanding clearings, it will be of value to note that, outside of New York, total clearings at all cities fell off 10.7 per cent. from November a year ago, and a fraction of 1 per cent. from November two years ago, while showing a gain of 4 per cent. over November, 1893.

It is a comforting reflection, however, that the decrease at all cities from a year ago in November, 2.8 per cent., was a much smaller falling off than that shown in October, viz., 12.5 per cent. In September this year the decrease was 11.4 per cent., in August 14.2 per cent., and in July 4.4 per cent.

The following table of percentages of increase and decrease during the eleven months of the past four years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 0.3	Dec. 36.9	Dec. 2.7
Two months	Inc. 11.7	Inc. 7.4	Dec. 34.0	Inc. 1.2
March	Inc. 2.2	Inc. 7.4	Dec. 30.7	Inc. 2.1
Three months	Inc. 8.4	Inc. 7.4	Dec. 33.0	Inc. 1.4
April	Inc. .9	Inc. 14.2	Dec. 25.0	Dec. 3.0
Four months	Inc. 6.4	Inc. 9.1	Dec. 31.0	Inc. .5
May	Dec. 13.0	Inc. 25.0	Dec. 26.3	Inc. 4.6
Five months	Inc. 1.9	Inc. 12.5	Dec. 30.2	Inc. 1.2
June	Dec. 2.4	Inc. 22.4	Dec. 20.8	Dec. 8.1
Six months	Inc. 1.1	Inc. 16.5	Dec. 28.1	Dec. .2
July	Dec. 4.4	Inc. 29.8	Dec. 15.4	Dec. 10.5
Seven months	Inc. .3	Inc. 16.2	Dec. 27.2	Dec. 1.6
August	Dec. 14.2	Inc. 16.1	Inc. 5.9	Dec. 25.8
Eight months	Dec. 1.4	Inc. 16.2	Dec. 24.4	Dec. 4.2
September	Dec. 11.4	Inc. 18.4	Inc. 5.3	Dec. 30.7
Nine months	Dec. 2.5	Inc. 16.5	Dec. 22.4	Dec. 7.0
October	Dec. 12.5	Inc. 22.3	Inc. 0.3	Dec. 27.0
Ten months	Dec. 3.7	Inc. 17.4	Dec. 19.5	Dec. 9.0
November	Dec. 2.8	Inc. 13.6	Inc. 1.8	Dec. 25.5
Eleven months	Dec. 3.6	Inc. 16.8	Dec. 17.8	Dec. 10.9

The showings made by the various groups of clearing-house cities during November and the eleven months of the year compare with preceding months as follows:

	August, 1896.	*Sept.*, 1896.	*October*, 1896.	*Nov.*, 1896.	*Eleven mos.* 1896.
New Engl'd.	Dec. 18.6	Dec. 10.7	Dec. 12.6	Dec. 2.4	Dec. 5.5
Middle	Dec. 14.9	Dec. 13.2	Dec. 12.5	Inc. .2	Dec. 3.3
Western	Dec. 13.2	Dec. 13.8	Dec. 19.9	Dec. 15.7	Dec. 7.4
Northwestern	Dec. 11.6	Dec. 10.2	Dec. 10.4	Dec. 12.2	Dec. 2.9
Southwestern	Dec. 9.9	Dec. 6.2	Dec. 12.5	Dec. 8.5	Dec. 6.6
Southern	Dec. 5.8	Inc. 9.7	Dec. 14.3	Dec. 7.9	Inc. 1.0
Far-western	Dec. 7.1	Dec. 3.7	Dec. 7.1	Dec. 7.2	Dec. 2.3
Totals	Dec. 14.2	Dec. 11.4	Dec. 12.5	Dec. 2.8	Dec. 3.6
Canada	Dec. 8.5	Inc. 2.6	Dec. 4.4	Dec. 5.1	Dec. 2.3

Only one group of cities shows a gain in November over a year ago, namely, that in the middle states, which, influenced by the gain of 3.6 per cent. at New York, increase a fraction of 1 per cent. In the other groups the decrease varies, being smallest in the New England group and largest in the central west. As showing the comparatively small proportion of cities reporting increases over a year ago, it may be of interest to note that only 13, or about one-sixth of the 83 cities making comparisons in this table with a year ago, report gains. Aside from New York, few large cities show gains. Portland, Me., in New England, Scranton in the middle states group, Dallas, Topeka, Waco and Houston in the southwest, Baltimore, Nashville and Augusta in the south, and Spokane and Portland, Ore., in the far-west report increases. In Canada, Toronto and Winnipeg report gains. The following list of 20 leading cities shows at a glance how few increases occurred during the month just closed:

	Inc. per ct.		*Inc. per ct.*
New York	3.6	Baltimore	4.3
	Dec. per ct.		*Dec. per ct.*
Boston	0.1	Minneapolis	5.1
Chicago	12.4	Cleveland	12.2
Philadelphia	20.7	Detroit	13.0
St. Louis	9.9	Louisville	15.0
Pittsburgh	17.9	Providence	22.4
San Francisco	5.6	Milwaukee	9.0
Cincinnati	13.2	St. Paul	13.9
Kansas City	7.7	Buffalo	12.4
New Orleans	16.2	Omaha	16.0

Baltimore, it will be seen, leads New York slightly in the proportion of gain, while Providence shows the heaviest and Boston the smallest falling off.

The total clearings at sixty-six cities for the eleven months ending November 30 aggregate $46,146,917,652, a decrease of 3.6 per cent. from a year ago, an increase of 12 per cent. over 1894, but a falling off of 7.5 per cent. from 1893, the year of the panic.

BANK CLEARINGS AT 87 CITIES FOR NOVEMBER, AT 83 CITIES FOR THE MONTH AND FOR ELEVEN MONTHS THIS YEAR AND LAST, AND AT 73 CITIES FOR FOUR YEARS.

CARRYING LONDON'S OBLIGATIONS HERE.

Estimates as to the amount of bills of foreign exchange that have been taken up since the election by international banking houses here and used as the basis for loans in the New York money market vary greatly. There is, however, no doubt that the transactions in question reach a very imposing total, and the sum of the sterling bills thus being carried supposed to be between £4,000,000 and £5,000,000. The process is a new one in international finance, and has naturally been the subject of some misunderstanding. The motives of the houses which are taking this action are, however, becoming better appreciated, and sufficient light has been thrown upon the situation to permit of clear ideas both as to the causes for it and the effects which it is likely to produce.

The novelty of the matter is that it apparently involves borrowing by London in our money market. Not, however, in the ordinary acceptance of the term. London bankers have not, it seems, made drafts on New York at sixty to ninety days and sent them here to be discounted. The London money market, however, is relatively firmer than our own, and the financial community there has been nervous as to the results of an expected demand for a large portion of the Bank of England's gold balances in connection with the expected reform of the Russian currency, coupled with the likelihood of a movement of gold to India and the large debits arising from Europe's purchase of American breadstuffs and provisions. Money on call in London has consequently been for some weeks up to 3½ per cent., while here it has ranged at from 2 to 2½ per cent., or, at any rate, has been obtainable at such figures from almost immediately after the election, with the prospect of this continuing for several months. The latter conclusion seems to have been generally reached in banking circles, and is borne out by the actual tendencies revealed by the statements of the New York associated banks for the last few weeks. Taking the averages for the three weeks ending November

14, November 21 and November 28 respectively, the aggregate gain in cash holdings in the period they cover has been $29,660,400, while the loans reported by the Clearing House banks for the same space show an expansion of $21,637,600, the corresponding increase of $52,196,700 in deposits agreeing perfectly with the change in the two other items. This, moreover, only partially reflects the exceedingly large amount of locked-up funds that have been returned since the election to the trust companies and other institutions outside of the Clearing House, and which appears in its regular returns only in an indirect and imperfect way.

The suggestion that there has been concerted action to have a large mass of sterling credits that would otherwise come upon the London market carried on this side of the ocean, or that the Bank of England has taken action of this kind, is not necessarily true. It has been, however, made, though a more natural explanation of the matter is found in the simple fact that with the ability to borrow money on easier terms here than in London, bankers find a reasonable certainty of profit in buying sixty and ninety day sterling bills, and borrowing money from New York institutions on call at 2 per cent. with the bills as security, the difference between the cost of long exchange and what it will bring at maturity as demand sterling constituting an inducement in the form of fair interest upon the sums involved for the period over which the transactions will extend. It may be observed that the public has become accustomed to combinations between the leading factors in international finance on both sides of the ocean, and that coöperation in a matter of this kind would not be unnatural. In this case, however, it is not necessary to suppose that any arrangement, formal or otherwise, in regard to the matters just described has been effected. The difference between the London and the New York money markets in point of rates, and of the ease with which loans can be obtained, is a decisive factor in the case. Moreover, as is observed by a prominent authority upon the exchange market, in referring to the subject: "Owing to this difference in rates of interest sterling is found to be the most convenient investment by our bankers, banks and financial institutions, who have been and are now still accumulating sterling at a great rate. This is the first time this has happened since about ten or twelve years ago, when a similar difference existed between ours and the London markets, and when everybody bought sterling up to the extent of his capacity. The speculation at that time left a very handsome profit."

In this connection it must, however, be considered that the process just described is keeping a mass of time obligations off the London money market, and diminishing to the extent of the sixty and ninety day bills taken up here, and carried in call loans, the demand for discounts in that market. Foreign purchases of grain and provisions being on such a huge scale, the amount of long sterling that the latter transactions create has been notably large, and but for the facility with which they or the bankers' long sterling drawn against them could be held here, the pressure for legitimate accommodation in the London money market would have been considerably greater. The continuance of gold shipments from there to our shores would otherwise have continued in all probability, while it should also be considered that the chances of disturbance, owing to the overgrown and imperfectly liquidated Kaffir speculation, which has been the most tangible danger in the foreign financial situation, has thus been naturally lessened.

To our own banking interests the opportunity of obtaining employment for a portion of the idle funds that since the election have been accumulating in the banks is not without its advantage. The figures referred to above in regard to the bank statements for three weeks back are significant in this connection. It may be noted that the loans involved in the process have been as a rule on call, bankers having assumed that such arrangements would be practically undisturbed as to rates for two or three months, this form of borrowing on bills at 2 per cent. having therefore been adopted in lieu of making time loans for such periods at 3 per cent. or more. It is indeed suggested that these operations in the exchange market are largely if not mainly responsible for the gain of $21,000,000 shown by the bank statements for three weeks past, as Wall street has been inactive to a degree which curtails its employing any additional money, and the revived activity in commercial paper has been attended by a rather scanty supply of acceptable material.

Another and very important consideration is the effect on exchange when the sixty and ninety day sterling, which has been the material for these transactions, matures and comes on the market in the form of sight drafts. This would occur, as regards the greater part of the £4,000,000 or £5,000,000 of exchange thus locked up, in January and February next, when exchange is under normal circumstances high, and when gold shipments from this side are likely to be required to liquidate our balances due abroad for interest on securities held in Europe and for payments on imports. The tendency of such an amount of exchange, if offered under such conditions, would be to check gold exports and even to keep rates somewhat below the gold shipping point. Since the election exchange has been relatively high, demand sterling touching $4.87 this week, but even the recent figures have been from 1c. to 1½c. below the rates at which gold could be exported, and, considering the ultimate probable effects in averting a drain of gold during the winter and spring, this country is probably a gainer from the relief it has afforded the London money market.

THE MONETARY ISSUE IN OUR POLITICS.

Mr. Bryan's official relations to the late canvass give to the expression of his opinions a degree of interest which they would not otherwise command, and for that reason the article which he contributes to the current number of the *North American Review* cannot be passed over without remark. No question of contemporary American politics possesses greater interest for the citizens of the country than that as to whether the silver propaganda is to be renewed in the next campaign. If it should be, it will produce political results of the first importance. For one thing, it will bring about a lasting schism in a great historic party and will insure the ascendency of its political opponents for many years to come. The men who left the Democratic party this year believed that they were doing so temporarily, and that after the brief midsummer madness which overtook the official representatives of the party at Chicago the organization would return to a condition of sanity which would enable it to carry on its work of aiding in the development of parliamentary government by party in the United States. If the word of Mr. Bryan is to be taken, however, this view is an erroneous one and we may look for a permanent division of the party hereafter.

According to Mr. Bryan's view, while the election resulted in a temporary defeat for the cause of bimetallism, that cause scored a permanent gain. He says that the fact is significant that the silver sentiment was strongest where the question had been longest considered, and that in the west and south, where the people had been actively engaged in discussing the question of bimetallism for several years, a majority was in favor of the Chicago platform. The progress made by the free-coinage people in the eastern states is regarded by Mr. Bryan as most encouraging, and he argues that, on the basis of the election returns, there is nothing to guarantee permanence in the victory for the gold standard. He regards it as certain that the issue will be sprung again in 1900, and that the free-coinage people will be successful. Of course, that question will have to be determined by other people than Mr. Bryan; still it may be as well to say for his benefit, as well as that of those who will pass upon the question officially, that any revival of the agitation will result in the permanent transfer to the ranks of the Republican party of what has been the most distinguished and effective element in the personnel of the Democratic party. There will always, we suppose, be a certain element in political parties that will stand ready to declare for free leather or free wampum, or free anything, but that element is not the one that secures victory for parties, and doubtless the "leaders" of the party, whose main concern is, after all, for the commercial side of politics, will see the futility of revivifying a dead issue.

REPORT OF THE FEDERAL TREASURER.

The annual report of the Treasurer of the United States shows the net ordinary revenues of the government during the fiscal year ending June 30 to have been $326,976,200 and the expenditures $352,179,446. This shows a deficiency for the year of $25,203,246, a little over $17,600,000 less than during the preceding fiscal year. Coming to details, the report shows that during the last fiscal year there was an increase of $7,863,134 in the receipts from customs, an increase of $3,341,192 from internal revenue sources, an increase of $2,479,622 from miscellaneous sources, and a loss of $97,823 from the sale of public lands, making the net increase in the receipts $13,586,125. The decrease in the expenditures amounted to $4,015,852. According to the report the total receipts from the first $50,000,000 loan of 1894 were $58,660,917; those from the second loan of $50,000,000 of 1894 were $58,719,710; the loan of $62,315,400 for 1895, $65,428,056; and those from the $100,000,000 loan of 1896 were $111,355,612. From the first loan there was realized $52,850,264 in gold coin and $5,810,420 in gold certificates; from the second loan, $53,651,188 in gold coin and $5,068,410 in gold certificates; from the third loan, $65,428,051 in gold coin, and from the fourth loan, $109,327,455 in gold coin and $2,026,810 in gold certificates.

Regarding the gold reserve, the report says that it has been the cause of much concern, and has been maintained only at the cost of a fresh issue of bonds and by the voluntary contributions of banks and financial institutions. With the exception of a brief period in the autumn of 1895 and another in the spring of 1896, the ruling rates of foreign exchange were such throughout the year as to permit, if not to require, the export of gold.

It is pointed out that in ordinary times and under ordinary circumstances there is a natural flow of gold toward the Treasury, which often is limited only by the capacity of the Treasury to carry the specie, and it is declared to have been fortunate for the Treasury that even during the most critical periods through which the country has recently passed these currents of inflow have not been altogether checked, and that where their volume has been materially diminished the loss has been partly made good by the assistance of financial institutions. In the fifteen months ended with September last the withdrawals of gold from the Treasury in redemption of United States notes and Treasury notes amounted to the immense sum of $192,972,205, while the net gains of gold from all sources attained a total of $98,138,902. The public debt outstanding June 30, 1896, is shown to have been $1,769,840,323, and on June 30, 1895, $1,676,120,983.

Revised estimates prepared by the department show the composition and distribution of the monetary stock at the end of the fiscal year to have been as follows:

	In Treasury and mints.	*In circulation.*
Gold coin	$112,589,904	$454,905,064
Gold bullion	32,102,920	...
Silver dollars	378,673,137	52,116,904

National bank notes	10,832,425	215,168,122
Gold certificates	620,070	42,198,119
Silver certificates	11,962,,313	330,657,191
Currency certificates	320,000	31,890,000
Total paper	$180,803,989	$939,208,547
Aggregate	840,871,040	1,507,467,531

According to these figures the total stock of money at the end of the fiscal year was $2,348,338,571, which represented a decrease of over $51,400,000, as compared with the corresponding date last year. This loss has, however, been fully recovered since the close of the fiscal year, chiefly by the importation of gold. The net proceeds of the national bank notes redeemed during the year were $107,891,026, the largest amount for any like period in ten years, and, with the exception of three years, the largest since 1879. The expense to the banks of redemptions will be $1.12½ per $1,000.

THE GOVERNMENT BALANCE SHEET.

Government receipts for the month of November amounted to $25,210,696, which represents a decrease of over $1,000,000 as compared with the receipts for October, and of over $700,000 as compared with the corresponding month of last year. The expenditures, on the other hand, amounted to $33,260,720, which represents an increase of over $700,000 for the month, but an increase of over $6,000,000 as compared with the corresponding month of last year. For the five months of the fiscal year which have elapsed the receipts amounted to $131,650,489, which represents an increase of over $9,600,000 as compared with the corresponding period of last year. The receipts from internal revenue showed only a slight increase as compared with those for the corresponding period of last year, whereas the receipts from customs showed

a decrease of over $13,100,000. Miscellaneous receipts show an increase of over $3,100,000.

The expenditures for the five months amounted to $171,597,335, which represented an increase of over $14,400,000 as compared with the corresponding period of last year. Civil and miscellaneous receipts showed an increase of nearly $10,200,000 as compared with the like period of 1895. The expenditures on account of the War Department showed a decrease of over $2,300,000, while those on account of the Navy showed an increase of over $3,900,000. The expenditures on account of Indians showed an increase of nearly $500,000, those on account of pensions an increase of over $600,000, and those on account of interest an increase of nearly $1,600,000. The deficiency for the five months was less than half that for the corresponding five months of 1895.

National bank circulation outstanding on November 30 amounted to $235,312,103, which represents an increase of $414,446 for the month and of $21,440,907 for the twelve months ending therewith. The portion of the circulation based on the deposit of bonds amounted to $216,609,684, which represents an increase of $99,670 for the month and of $26,140,158 for the year ending therewith. The portion of the circulation based on deposits of money amounted to $18,702,419, which represents an increase of $314,776 for the month, but a decrease of $4,699,251 for the twelve months ending therewith.

SHARPLY CHECKED RECEIPTS OF WHEAT.

The regular monthly exhibit as to available stocks of wheat in the United States and Canada, and afloat for and in Europe on December 1, constitutes the most bullish presentation of the statistical position of that cereal at a corresponding date for the past six years.

Total available stocks of wheat in the United States on December 1, 1896, with comparisons for like dates in preceding years, as reported to BRADSTREET'S, are as follows:

	East Rockies.	*Pacific coast.*	*Total U. S.*
December 1, 1896.....	76,433,000	6,548,000	82,981,000
December 1, 1895.....	87,688,000	8,276,000	95,964,000
December 1, 1894.....	113,116,000	14,582,000	127,698,000
December 1, 1893.....	96,597,000	10,629,000	107,226,000
December 1, 1892.....	94,671,000	10,415,000	105,086,000
December 1, 1891.....	62,328,000	10,020,000	72,948,000
December 1, 1890.....	44,843,000	12,361,000	57,205,000
December 1, 1889.....	54,455,000	8,120,000	62,575,000
December 1, 1888.....	51,394,000	6,477,000	57,871,000

Total stocks of available wheat in the United States and Canada, east of the Rocky mountains, amounting to 76,433,000 bushels, are smaller than corresponding aggregates on like dates since December 1, 1892, but larger than at corresponding periods on December 1, 1891, and in preceding years. The unusual decreases in available supplies of wheat on the Pacific coast during the fall and winter this year and last have reduced the total held to the smallest proportions on like dates since 1889. Total stocks, United States and Canada, both coasts, amounted, therefore, December 1, 1896, to 82,981,000 bushels, about 7,000,000 bushels less than one year ago, 45,000,000 bushels less than two years ago, 25,000,000 bushels less than on December 1, 1893, and 23,000,000 bushels less than on the corresponding date in 1892, the increase as compared with the corresponding total in 1891 being about 10,000,000 bushels.

The total quantities of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantities afloat for Europe from all exporting countries, on December 1, added to available stocks in Europe, as reported to BRADSTREET'S, are as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
December 1, 1896.	76,433,000	6,548,000	65,504,000	148,485,000
December 1, 1895.	87,688,000	8,276,000	68,184,000	164,348,000
December 1, 1894.	113,116,000	14,582,000	56,912,000	184,610,000
December 1, 1893.	96,597,000	10,629,000	83,160,000	190,386,000
December 1, 1892.	94,671,000	10,415,000	70,728,000	175,814,000
December 1, 1891.	62,328,000	10,620,000	84,800,000	157,748,000
December 1, 1890.	44,843,000	12,361,000	50,464,000	107,669,000
December 1, 1889.	54,455,000	8,120,000	54,680,000	117,255,000

The sudden struggle for wheat by the United Kingdom, France, South Africa, Australia and other countries during the past few months has done much to increase the quantity afloat from all exporting countries, as well as to increase stocks held at some ports of import. Instead, therefore, of finding the total stocks of wheat afloat for and in Europe much smaller on December 1 than at the corresponding dates one and two years ago, as has been the case with totals reported in preceding years, it is found on December 1 this year there were 65,504,000 bushels of wheat afloat for and in Europe, only about 2,600,000 bushels less than one year ago, 8,000,000 bushels more than on December 1, 1894, but 18,000,000 bushels less than on the like date in 1893, 5,000,000 bushels less than at the corresponding period in 1892, and almost 20,000,000 bushels less than on December 1, 1891.

Incorporating totals of wheat afloat for and in Europe with available stocks both coasts of the United States and Canada, it is found there were 148,485,000 bushels so held on December 1, 1896, 16,000,000 bushels fewer than were reported one year ago, 36,000,000 bushels less than on December 1, 1894, 42,000,000 bushels less than at the corresponding date in 1893, 27,000,000 bushels less than in 1892, and 9,000,000 bushels less than on December 1, 1891, making the existing total of world's supplies of wheat, so-called, the smallest on December 1 in six years, although the existing total is about 40,000,000 bushels larger than the aggregate December 1, 1890, and 31,000,000 bushels larger than on the corresponding date in 1889.

But BRADSTREET'S reports of increases or decreases of stocks of wheat, both coasts of the United States, by months during the current calendar year, furnish in the November figures a most bullish report as to the statistical position of wheat in the United States. Thus, during November, 1892, stocks of wheat east of the Rocky mountains and in Canada increased 16,000,000 bushels; in 1893, 13,000,000 bushels; in 1894, 7,000,000 bushels; in 1895, 12,000,000 bushels, but last month they fell off 283,000 bushels.

On the Pacific coast the increase in available wheat stocks in November, 1892, was 1,700,000 bushels, in the corresponding month of 1893 it was 2,800,000 bushels, in 1894, 2,500,000 bushels, but in November, 1895, wheat stocks there decreased 1,376,000 bushels, and last month they decreased 335,000 bushels.

Aggregating totals for both coasts, it is found, whereas available stocks of wheat, United States and Canada, increased 17,747,000 bushels in November, 1892, the increase was 16,200,000 bushels in that month in 1893, 9,816,000 bushels in 1894, and 10,715,000 bushels in November, 1895, while in November, this year, there was a net decrease amounting to 618,000 bushels.

Between July 1 and November 30, 1892, the first five months of a cereal year, total available stocks of wheat, United States and Canada, both coasts, following the enormous wheat crop of 1891, increased 69,426,000 bushels. In the corresponding five months of 1893 the increase was only 31,118,000 bushels, but in the like period of 1894 there was another heavy gain in the visible supplies here and in Canada, amounting to 54,195,000 bushels, while during the period from July 1 to November 30, 1895, one year ago, the increase, net, in available wheat stocks was only 35,756,000 bushels. The bullish character of the statistical position of wheat now is emphasized by records of the movement of wheat during the last five months, which shows a total net increase of available stocks amounting to only 19,700,000 bushels, one-half of what it was in the like portion one year ago, one-third what it was in the corresponding portion of 1894, a little more than one-half of what it was in the like portion of 1893, and a little more than one-quarter of what it was in the like period from July 1 to November 30, 1892.

The November increase in the so-called world's total available wheat supplies is shown by an accompanying tabular exhibit to have been about 11,000,000 bushels in 1896, contrasted with 11,000,000 bushels in November, 1895, the distinction being that last month the increase was almost entirely in stocks afloat for and at points in Europe, while in the month a year ago European purchases were falling off, and the gain was almost exclusively in the United States. In November, 1894, the gain was only 6,000,000 bushels, about one-third of what it was in 1893, a little more than one-quarter of what it was in November, 1892, exactly one-quarter of the increase in the like month of 1891, and a little more than one-third of the total gain in available supplies of wheat in November, 1890.

TOTALS OF AVAILABLE WHEAT IN THE UNITED STATES, CANADA AND EUROPE AND AFLOAT FOR EUROPE.

* Decrease. † Increase.

THE TARIFF AND OUR TINPLATE INDUSTRY.

To the Editor of BRADSTREET'S:

SIR—Your article of November 28 on the "British Tinplate Industry" is based upon extracts from English and other papers, but I fear that, if it is quoted, BRADSTREET'S will be given as the authority. I beg leave, therefore, to submit a few comments upon it.

Writers on the subject are generally confused as to the facts. A duty of 1c. a pound was increased to 2 1/5c. in 1890, and reduced to 1 1/5c. in 1894, while the tinplate industry in the United States, which halted under the highest rate, has actually developed rapidly since the reduction to a lower rate. What they lose sight of is the simple truth that in this, as in other instances, the changes which have taken place are owing to other forces and events in the commercial world which are more powerful than the tariff. Unthinking people are apt to ascribe many things to tariff changes, when common sense and observation would show them that changes much greater than tariff changes (and often greater than tariff duties) are all the time being wrought by other influences which affect prices and cost of production.

I think you are mistaken in saying that there has been a change which "bears out the claims of the friends of the tinplate sections of the McKinley bill." You must have forgotten what those claims were. A

fortnight ago I looked over a large box full of them, and it is safe to say that the only claims borne out by the course of events are claims which no economist disputed.

No economist denied that the cost of producing tinplates might fall so far that the New York price under an added tariff might be below the New York price of May, 1890. As a matter of fact, however, it did not so fall during the McKinley tariff. There was everywhere a great fall below the 1890 prices in other metals, especially the steel of which tinplates are made, but the added tariff prevented tinplates in New York from falling, and actually held them at a considerable increase. The present duty is much lower, and it could not have prevented tinplates from sharing in the general fall of prices, even if the industry in America had still halted.

I regret that you should reprint the extract referring to the prices "prevailing before and after the passage of the McKinley act." It is a repetition of an old and misleading statement which has been often exposed. I must repeat, though it ought not to be necessary, the well known fact that the McKinley increase in tax naturally took effect upon prices even before its passage; as soon, indeed, as it became evident that it would pass. The price of September, 1890, used for comparison in the extract was, therefore, itself a "McKinley price." As for the low prices mentioned for 1894, 1895 and 1896, they are all prices since the repeal of the McKinley tariff.

On the face of it, then, there is nothing to "upset the arguments that the added tariff would increase the cost of the protected article to the consumer." It did increase that cost, which was reduced under the reduced tariff.

A dollar's worth of very many things, tinplates included, is greater than in May, 1890; but it is a fact that we have to pay more for a dollar's worth of tinplates than we did then. In May, 1890, the tariff compelled us to pay $1.32 for a dollar's worth (see United States Treasury Reports). The past year we have paid from $1.37 to $1.52 for a dollar's worth.

Our tariff has, since May, 1890, compelled American metal workers to pay at least $50,000,000 more than their tinplates were worth, and by the time the burden reached the consumers it was much greater than that. Those are the true aspects of the tinplate tariff as it affects Americans, and they need not be confounded with the effects upon a foreign industry.

HENRY W. LAMB.

Boston, December 2, 1896.

THE COMMERCIAL CABLE-POSTAL DEAL.

Among the announcements of the week in connection with corporation and financial matters, none were of greater interest than that in relation to the proposed amalgamation of the Postal Telegraph Cable Company and the Commercial Cable Company. In one sense this action involves no significant change, as the controlling interest in the two companies is the same. Nor is there to be a formal consolidation. The plan considered this week by the managements of the two companies, and given to the public, contemplates the acquisition by the Commercial Cable Company of all the share capital of the Telegraph organization, which will thus be absolutely under its control, although its corporate existence will be maintained unimpaired and its operations will be conducted under a separate management, as in the past.

At present the capital stock of the Postal is $15,000,000, and that of the Commercial Cable $10,000,000. While both companies at one time had bonded debts, that of the Cable Company was paid off, while the Postal Telegraph's bonds were extinguished by the reorganization of the old company in 1886. It is now proposed that the Cable shall create $20,000,000 of 4 per cent. debenture bonds, and devote $15,000,000 of them to acquiring the stock of the Telegraph Company by an exchange for the latter on the basis of par. During the present year the Postal commenced the payment of dividends to its stockholders at the rate of 1 per cent. quarterly, so that the proposed issue of debentures, which will be substituted for the outstanding stock holdings, will involve no change in the return to the owner thereof. The remaining $5,000,000 of the debentures is to be reserved for the extension of the Telegraph Company's lines, such outlay and corresponding increase in the capitalization of the united properties to be extended over a period of ten years, or, it may be presumed, at the rate of $500,000 per annum. The meeting of the stockholders of the company to confirm the arrangements that have been set on foot by the directors is to be held December 22, and as the controlling interest in each organization is the same, while the terms themselves are advantageous and calculated to secure not only a perpetuity of the close relations between them, but a certain increase in efficiency, and profitable results from operating the two properties, the formal assent of the minority interests in each company will doubtless be readily obtained. It is to be further remarked that the Cable Company has been financially successful, and has for several years past paid regular dividends at the rate of 7 per cent. per annum on its $10,000,000 stock.

While the securities of the two companies are listed in the New York stock market, they are not the object of trading to any extent in the Stock Exchange. The Montreal market is, however, the scene of considerable dealings in them, and it is stated that in anticipation of the facts just stated, there has recently been an active bull speculation in them on the local stock exchange, Postal stock selling up to 93⅞, and Commercial Cable shares to 162.

The relations of the two organizations which now propose to cement their former alliance into a permanent union to the other cable companies and to the Western Union Telegraph organization, have long ceased to have a warlike character. In fact, for some years past there has been an absence of any rate cutting or friction in either the telegraph or cable field. At the same time, the public remembers the warfare which each organization in its particular field waged against the monopolization of such means of communication, and their independent existence is naturally regarded with favor as affording a safeguard against any oppressive measures from other quarters. It may be remarked that without a system of land lines reaching the important centers of the country, the cable system of the Commercial Company could not be worked to advantage, and the lines of the Postal Company, in building which the aim has been to reach mainly the greatest centers of population and business, fulfill that requirement. It is stated that last year the telegraph organization collected and delivered to the cable business amounting to $660,000, or about one-third of the total gross traffic of the latter. It is also understood that the revenue which the Postal itself derived from this business was less than $100,000, and was, in fact, a comparatively small item in its earnings. Its facilities for reaching and distributing cable business is, however, a vital necessity to the Cable concern, and hence the formulation of the arrangement that is now proposed.

Nor is the plan devoid of advantages to the Postal apart from the fact that its contract is vested in interests which are closely identified with the inception and maintenance of the Cable Company. The payment of dividends by the Telegraph Company began, as already stated, with the present year. From the date of the reorganization in 1886 to the end of 1895 it had expended $3,347,000, derived from its net earnings, on the extension and improvement of its plant, and in 1895 increased its capital stock from $10,000,000 to $15,000,000, devoting the proceeds of the increase to construction and new acquisitions. In 1886 the company had only 37,000 miles of wire, and in the same year handled 3,000,000 messages. Last year its pole mileage amounted to 19,500 miles, and its wires aggregated 117,000 miles, while the total traffic they carried amounted to 12,500,000 messages. The arrangement by which further amounts derived from the Commercial Cable Company's new 4 per cent. debenture issue, to the extent of $500,000 per annum, will, during the ensuing ten years, be available for the purpose of extending the system, is an assurance of continued growth, which, under present conditions in telegraphy in the United States, is of the utmost importance to the public as well as to the owners of the company's securities.

THE DECLINE IN KAFFIRS.

London's anxiety in regard to the money market during the month just ended was not apparently due to apprehension that a period of absolute financial stringency would be encountered. There has been no likelihood of conditions similar to those which Wall street had to bear in 1893 or again in the weeks immediately preceding the recent election. The fear which influenced, and probably still influences the British market, was that financial pressure and enforced conservatism on the part of lenders of money would bring about a violent collapse in the mining stock market, more particularly in the South African and West Australian departments. The wonderful growth of those speculations was favored by the abundance of money in the London market, and the low rates which for several years past made lenders rejoice in anything which gave constant and profitable employment for their funds and the success at business and speculative enterprises of so many of the mining companies founded on the wonderful richness of the Witswatersrand gold reefs. Both features of the situation favored the appearance of multitudes of enterprises of an unsound character. The public appetite for gold mines was excited by the actual performance of such a number of the producing mines, as well as by the alleged prospects of similar developments in the territory of the British Chartered Company. At the same time the ease with which capital could be enlisted in new concerns in this field, as well as in West Australia, was supplemented by the comparative readiness with which the funds necessary to support an inflated speculation in mining shares could be obtained and the stocks of speculators "carried" in the market. While the great mining speculation throughout has been conducted to a great extent on the basis of the taking up of stocks by their purchasers, there has also been necessarily more or less borrowing on them, and the fact that the general public has been a mighty factor in the movement has rendered liquidation on a large scale a necessary incident, with every appearance of hardening in the money market, which tended to create a general demand for funds. This tendency has been particularly noticeable during the past month. The advance in interest rates at London, due to the reduction of the Bank of England reserves and the fear of demands for further large sums of specie from this country, from Russia and from India, have seemed at times likely to give the coup de grace to the entire mining inflation. The shrinkage in mining-share values which has been in progress since the autumn of last year, appears to be still incomplete. That the enormous depreciation has not been attended by more striking disasters may be attributed to the fact that, to a considerable extent, the high prices represented paper rather than actual values. Another safeguard was found in the fact, before referred to, that the "Kaffirs" and "Westralians" were so generally bought for cash, and not carried on margins. In spite of this there has been enough danger in the situation to justify the anxiety which Londoners have felt and shown as to the possibilities in this connection.

AUSTRALIAN RAILWAYS.

Principals and methods of a highly advanced, not to say semi-socialistic character, have flourished in Great Britain's Australian colonies. In many respects those countries represent the ideals which our own Populists contend for in the government of this country. The railroads there, for instance, are the creations of the government and are operated by the various colonies as a department of their several administrations. This, of course, is not a novelty, as it also exists in several European countries. Conditions under which the railroads of Australia have been built and under which they are worked are, however, much more like those which exist here than in Europe outside of Russia. There is the same vast extent of unoccupied territory and comparatively limited population which the development of the country there as here has depended largely upon furnishing modern methods of transportation. Australia early in its history adopted the principle of public initiative in regard to its railroads, built its lines with public money obtained by increasing the colonial debts, and worked them at a loss—presumably for the public benefit.

The aggregate capital expended by the four colonies named upon their railroads to the 30th of June, 1896, is given as £107,357,000. In the fiscal year ending with the date just mentioned the gross earnings were £7,261,000, the operating expenses were £4,326,000 and the net revenue £2,935,000. Interest charge on the capital expended reached the sum of £4,041,000, so that the Australian roads, as a whole, cost the governments a sum of £1,105,000, which has been added to the general public indebtedness. It may be added that the ratio of working expenses to gross earnings was 59.57 per cent.

The London *Economist* supplies the following tabulation of the details of Australian

railroad mileage and capital expenditure for three years:

MILES OF ROAD.

Colonies.	1895-96.	1894-95.	1893-94.
New South Wales	2,531½	2,516¼	2,427½
Victoria	3,121	3,082¾	2,981¾
Queensland	2,386	2,379	2,379
South Australia	1,722¼	1,722	1,664¾
Totals	9,760½	9,700	9,453

CAPITAL EXPENDITURE.

Colonies.	1895-96.	1885-86.	1895-96.
New South Wales	£37,622,207	£36,611,366	£35,855,271
Victoria	38,108,151	37,922,207	37,748,563
Queensland	18,743,488	18,482,736	18,376,678
South Australia	12,583,443	12,520,378	12,154,417
Totals	£107,357,289	£105,536,687	£104,134,929

It follows this by saying regarding the mileage: "During the last two years New South Wales has added 104 miles to the average for the year at an increase of £2,067,000 of capital expenditure; Victoria has added 139 miles, the increase in capital expenditure being £360,000 (the larger portion of the cost of the new lines had been incurred prior to 1894); Queensland has added only 7 miles—increase in capital expenditure £367,000, and South Australia has added 57 miles—increase in capital expenditure £429,000." Moreover, the same journal in commenting upon the general results offers the following explanation: "More than two-thirds of the public indebtedness of the four colonies has been incurred for the purpose of railway construction, and upon the results shown the justification of the course followed must largely depend. It is necessary, however, to keep in view the large addition made to the material wealth of the colonies in former times (not lately) by the opening up of the country by means of railways, as well as the fact that their construction was rendered absolutely necessary for the reason that for purposes of internal navigation Australia is almost a riverless continent. These broad considerations are, however, subject to qualification as regards at least one colony. The vigorous railway policy of Queensland of a few years ago, although it may have been tainted, as nearly every colonial public enterprise has been in the past, finds its justification in the opening up of a vast and potentially very wealthy country. Three almost parallel lines run inland from the coast for about 500 miles. But the railway extensions in Victoria made during the period of inflation and booming cannot be condemned in too strong terms. Four-fifths of them were not wanted; their construction has promoted no substantial material interest, but it has unsettled previous settlement. There is all the difference in the world between the railway extensions of Queensland and those made in Victoria since 1887. In the one case an economic demand was met; in the other, there was a senseless and reckless squandering of easily borrowed money, without results worthy of record."

The detailed reports for the various colonies follow in the accompanying tabulated forms, the returns being for the fiscal year ending June 30, 1896:

	New South Wales. 1895-96.	*Victoria.* 1895-96.	*Queensland.* 1895-96.	*South Australia.* 1895-96.
Gross	£2,820,417	£2,401,392	£1,052,691	£986,500
Expenses	1,551,888	1,546,475	644,361	583,022
Per cent	55.02	64.40	61.21	59.10
Net	1,268,529	854,917	408,330	403,478
Interest	1,377,535	1,438,603	756,544	468,374
Loss	109,006	583,686	348,214	64,896

As compared with the losses above stated for the year just ended the four colonies in three years show the following deficits from their railroads to be supplied out of general revenue:

	1895-96.	1894-95.	1893-94.
New South Wales	£109,006	£48,184	£118,045
Victoria	583,686	380,649	370,169
Queensland	348,214	364,199	420,426
South Australia	64,896	75,503	32,879
Totals	£1,105,802	£868,535	£941,469

It must be remembered, of course, that Australia, during the period covered by these figures, has had more than its fair share of the general depression in trade and commerce, and that the paper from whence these statistics are in the main quoted puts a recovery of general prosperity as the first essential to bringing about an improvement in the position of Australian state railways.

"BULL" VIEWS OF WHEAT.

To the Editor of BRADSTREET'S:

SIR—During the past few days there have practically been no farmers' deliveries in the country, owing to climatic reasons. Taking into account the moderate receipts into Minneapolis for the balance of this month, and taking my previous estimates of the crop into account, there will on the first day of December be in store in Minneapolis about 20,000,000 bushels; in store at Duluth, 3,000,000; in transit to Minneapolis and Duluth, 1,000,000; in country elevators, 10,000,000, and in farmers' hands, 18,000,000, or a total supply of 51,000,000 for the mills in Minneapolis and Duluth up to the first of September, when the mills can begin to use a little new wheat.

Besides, I figure there is enough back in the country for the farmers' bread and seed and to run the country mills up to about the same capacity as they were run last year. Now, as to what this wheat will be wanted for: The mills at the head of Lake Superior ground, on last year's crop, 9,000,000 bushels from December 1 to September 1; the mills in Minneapolis ground 38,000,000 bushels during the same time; the mills that draw their wheat from Minneapolis, and have no other source of supply, estimated about 5,000,000 bushels.

Out of the supply of 51,000,000 bushels there must be reserved at least 7,000,000 bushels to be on hand on September 1 for the mills to mix in with the new wheat. This is a great deal less than is usually supposed to be necessary, but I put it at the minimum amount, without which amount the mills could not commence grinding new wheat.

This would leave a total supply of 44,000,000 bushels for the mills up to about the first of September, when they really ground on the last crop, during the same time, 52,000,000 bushels, so I figure that the mills must from now on grind at least 8,000,000 bushels less wheat than they did last year during the same time. Now, if there are any extraordinary demands made upon our wheat, such as the winter wheat mills coming up here for their supplies, or if the mills at Buffalo, Rochester or vicinity, or in the east, buy any more of our wheat, or if any more is wanted for export, that means that our milling capacity must be diminished by so much more. I do not know what the stocks of wheat are at Buffalo and Rochester, but I do not believe they have more than enough to run the mills until the opening of navigation next spring.

Now these figures are based on my estimate of the [spring wheat] crop being about 108,000,000 bushels. A great many believe that the crop of the northwest was not over 100,000,000, and no one that I have heard of has estimated it over 115,000,000. These figures also admit that there were 20,000,000 bushels of old wheat left over on the first day of August. (I know of no one who estimates the amount of old wheat larger than this).

Now, instead of our being able to sell Europe our usual amount of flour, we must commence to sell them less than usual. The winter wheat mills, from all the information I can get, are in a good deal worse condition than the spring wheat mills, and my information leads me to believe that there is not more than half enough wheat in the country to run the winter wheat mills to their usual extent. Therefore, it is fair to suppose the spring wheat millers will be called upon to supply flour in territory usually supplied by the winter wheat mills to a larger extent than usual. How high this state of affairs will put the price of flour I leave each one to decide. Yours, very truly,

CHAS. A. PILLSBURY.

Minneapolis, November 28.

ST. LOUIS' SHOE INDUSTRY.

To the Editor of BRADSTREET'S:

SIR—Knowing that you are on the lookout for information that will show a brightening tendency in the shoe trade, we give you the following facts regarding our business:

Up to Saturday, November 28, we have taken orders for spring amounting to near $1,000,000, and orders continue to roll in from every direction, and they are for larger amounts than last year, and include more better grade goods than before. At our factory, Twenty-first street and Lucas place, for the month of November, we produced $100,000 worth, against $82,000 worth for November, 1895. We are running full time, necessitating the employment of 1,000 hands, which is a larger number than we have ever employed there.

Trusting that this will help to encourage others to look on the bright side of things, and make an earnest effort to bring back confidence, we remain, yours truly,

HAMILTON, BROWN SHOE CO.,
A. D. BROWN, President.

St. Louis, November 28.

THE NATIONAL ASSOCIATION OF MANUFACTURERS.

To the Editor of BRADSTREET'S:

SIR—The date for holding the second annual convention of the National Association of Manufacturers has been fixed for the 26th, 27th and 28th of January, 1897, at Philadelphia, Pa.

It is expected that this convention will be one of unusual interest, as the president will submit a report of the first full year of practical work in the lines mapped out by the original convention held in Cincinnati, January, 1895.

This report will describe the initiation of a practical movement in the direction of the cardinal principles originally adopted by the association, and very gratifying progress in various directions will be noted. It will then devolve upon the convention itself, which will embrace the recorded members holding certificates in the association, to pass upon the work which has been done, and to indicate a policy to be pursued by the president and executive committee during the next year, in which year it is confidently expected that existing conditions will enable the association to make vigorous progress. Yours very truly,

E. P. WILSON, Secretary.

Cincinnati, Ohio, November 28.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

The review of the report of "Possibilities of Extending Our Trade with Sweden," published in BRADSTREET'S November 21, was, through some inadvertence, credited to the State Department when it should have been attributed to the Section of Foreign Markets of the Agricultural Department.

CURRENT BUSINESS NEWS.

Industrial.

The Pomery Company's woolen mills at Pittsfield, Mass., which have been idle nearly a year, have been leased to the Pontoosuc Woolen Company, of that city, who will begin operations on Monday.

Owing to the fact that large orders have been coming in for the past two weeks the extensive car and machine works located at Jeansville, Pa., have started up and will run night and day for the next two months.

Five Japanese commissioners are making a tour of the United States and Europe in search of information with the purpose of erecting a small plant in Japan for the imperial government for the manufacture of steel rails. They have been spending some time in Pittsburgh inspecting some of the leading iron plants. It is the intention of the commission to secure an eight-ton converter to ship to Japan, and they propose to purchase the most modern machinery.

A Philadelphia dispatch says: "The leading locksmiths of the country are said to have formed a new combination to regulate the prices of locks in general, but more particularly trunk locks, on which, it is asserted, prices have been ruinously low during the last two or three years. Prices have been advanced from 25 to 30 per cent. within the last two weeks, and it is thought there is every prospect of a further advance. Provision has been made, it is said, against any dissolution of the present combination for a term of five years."

The Ohio Steel Company, Youngstown, was to start its large plant November 30, and, it is expected will run steadily until the holidays. It is said that an order has been received by the company for 15,000 tons of steel billets, which will be used in making wire nails.

The factory of the Roxbury, Mass., Carpet Company, which when running on full time employs 1,000 to 1,200 people, has shut down indefinitely.

After a four months' shutdown, the Pemberton Mills, at Lawrence, Mass., have started up, giving employment to 500 of the 800 hands. They will run forty hours a week.

The directors of the Pittsburgh Plate Glass Company have decided to put all of the company's nine factories in operation. Two factories were started after election, and three more two weeks ago. This will give employment to about 10,000 hands.

A Columbus, Ohio, dispatch says that the Ohio mine workers will support the Pittsburgh miners in case they strike for the 6 cents advance they have demanded.

George Fowler, Sons & Co., of Kansas City, packers, have given notice that on January 1 a cut of 10 per cent. would be made in all salaried positions in the force; that is, the officers, clerks and foremen.

A Sault Ste. Marie dispatch says that work is to be begun within thirty days on "the Soo's big water power canal." It is to be 400 feet wide.

The Falls Cotton Company, of Norwich, Conn., has resumed operations after four-and-a-half months' shut down, and about 500 employees began work.

Norcross Bros.' granite quarries at Stony Creek, Conn., have increased operations to full time, with 200 employees.

The Sharon Iron Company's big furnace at Sharon, Pa., has been put in blast after an idleness of several months. About 125 men are affected by the resumption.

Commercial.

The Window Glass Manufacturers' Association of the United States, who have been in session for two days at Indianapolis, Ind., have reorganized both the old associations—that in the east to be known as the Pittsburgh Window Glass Company, and that in the west the Western Glass Company. Each company has practically the same constituency.

During the period beginning January 1 and ending September 30, 1896, the United States exported paper to the value of $2,107,000, which is an increase of $386,000 over the corresponding period in 1895.

The submarine cable between New York city and Hayti has been opened to the public for the transmission of messages to Hayti and other places in the West Indies. The cable approaches New York by way of Coney Island and Brooklyn.

Statistics given in the *Manufacturers' Record* show that of the increase of 57,000,000 bushels in corn exports from the United States for the last ten months, nearly 50,000,000 bushels was from the south. The exports from that section have been about 65,000,000 bushels, against 16,000,000 bushels for the corresponding time last year.

Sales of Alabama pig iron in foreign markets have been of great volume recently, and inquiries for that make have been pouring in with great regularity and for large quantities. The Sloss Iron & Steel Company has accepted an order for 3,000 tons for export to Calcutta, India. The Tennessee Coal, Iron & Railroad Company have begun to ship 3,000 tons to Liverpool. Among the inquiries recently received was one from Rotterdam for 10,000 tons, and two for 3,000 each from Italian ports. There is considerable difficulty in getting boat room at Charleston and Savannah to ship the iron. This is attributed to the heavy movement of cotton from those ports.

The Kansas Board of Agriculture has issued a final bulletin showing yields of the more important crops grown in the state in the year 1896. The total yield of winter wheat is 27,153,365 bushels, or 11,641,124 bushels more than in 1895. Its total value is put at $13,016,229. The average per acre for the entire state is 8½ bushels. The corn crop is 221,419,414 bushels, or 19,962,018 bushels more than last year, the average being 28.03 bushels per acre. Its value is $35,633,013, as against $46,189,772 for the previous year's crop. Of oats the yield is 19,314,772 bushels, against 31,664,748 bushels the year previous. The yield per acre was but 13.06 bushels, and the value of the crop $2,706,652. Spring wheat shows a yield of but 601,523 bushels. The combined value of winter and spring wheat, corn and oats raised the present year is $51,596,859, and that of the same crops in 1895 was $59,273,079.

A St. Louis dispatch says that on account of the high price of wheat the local flour market is unsettled, and a number of the larger mills have closed, while a majority of the remainder are running on half time.

King & Co., Toledo, write that the "New York Produce Exchange wants the monthly crop reports issued at noon. Better not change the present hour. Now they come after all markets are closed, and the entire country can see them in the morning newspapers at the same time and no class has an advantage." [How about the advantage to Liverpool and London of five hours the next morning?]

A Negaunee, Mich., dispatch says that owing to unexpectedly severe weather the ore-shipping season will close earlier than anticipated.

At the meeting of the American Sanitary Pottery Association held at Trenton, N. J., it was decided to dissolve the association and to cancel the compact made between the members regarding uniform prices and discounts.

Stocks of wheat in St. Louis private elevators, December 1, were 718,000 bushels.

A contract has been closed for a large supply of Baltimore flour for shipment to South Africa. It is to be sent from New York to Port Natal and to the Transvaal.

Des Moines has a large jobbing and manufacturing business, amounting at last count to, jobbing $40,069,991 and manufacturing $16,762,121.

The Erie Canal season ended Tuesday, December 1, at midnight, having lasted exactly seven months. Shipments of grain of all kinds from Buffalo aggregated 35,868,996 bushels, an increase of nearly 16,000,000 bushels over the shipments for the season of 1895, but a decrease of nearly 13,000,000 bushels from the 1894 record. Grain receipts at Buffalo aggregate for 1896 154,338,921 bushels, which exceed the 1895 figure by 51,000,000 bushels, and exceed the 1894 season by 57,500,000 bushels. "Until this season, that of 1893 was the one in which Buffalo had the largest receipts by lake. In that year the receipts aggregated 132,808,234 bushels."

Financial.

The Spirits Distributing Company has declared a dividend of 1¾ per cent. on its first preferred stock, payable December 15.

The Boston & Albany Railroad Company has declared a quarterly dividend of 2 per cent., payable December 31.

The Chicago & Eastern Illinois Railroad Company has declared a quarterly dividend of 1½ per cent. on its preferred stock, payable January 2.

The Westinghouse Electric & Manufacturing Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, payable January 1.

The United States Rubber Company has declared a semi-annual dividend of 4 per cent. on its preferred stock, payable January 16. The question of a dividend on the common stock was deferred until December 23.

The Commercial Cable Company has declared a quarterly dividend of 1¾ per cent. and an extra dividend of 1 per cent., payable January 1.

According to a Des Moines dispatch "the revenues of Iowa are short $500,000, and an issue of bonds may be necessary."

A lumbermen's convention has been called to meet in Cincinnati, Ohio, December 15, to urge the restoration of the tariff on lumber, which since the act of 1894 has been on the free list.

The Chicago & Northwestern Railroad Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, and a semi-annual dividend of 2½ per cent. on its common stock, payable January 6.

The Denver & Rio Grande Railroad Company has declared a semi-annual dividend of 1 per cent. on its preferred stock, payable January 15.

The Postal Telegraph Cable Company has declared a quarterly dividend of 1 per cent., payable January 15.

Cash on hand, $236,130; profit and loss (surplus), $139,127.

The all-rail east-bound shipments of dead freight from Chicago last week were 61,866 tons, against 65,640 tons the previous week and 58,312 tons the corresponding week of the previous year.

Judge McKenna, of the United States Circuit, has granted an injunction against the California railroad commission from enforcing an 8 per cent. reduction in grain rates on lines of the Southern Pacific within the state of California.

According to a decision of the Joint Traffic Association the withdrawal of commodity rates upon glucose and glucose syrup, as per Joint Traffic Association Freight Circular No. 181, is postponed until March 31, 1897.

In addition to $3,000,000 Pan Handle 4s, the Pennsylvania railroad has sold $1,400,000 50-year 4½ per cent. bonds on the Ohio river bridge, connecting Cincinnati with Newport and Covington, and $1,300,000 40-year 4s on the new Delaware river bridge at Bridesburg, Philadelphia.

On January 1 nearly $10,000,000 of Pacific Railroad bonds become due and payable.

A bill has been introduced in the Georgia legislature authorizing the sale of the Northeastern Railroad, the minimum price being fixed at $287,000, the amount of the state bonds on the road.

The directors of the Southern Railway have declared a dividend of 1 per cent. on the preferred stock. This is the first dividend declared on the stock since the organization of the company.

The following October gross and net earnings are reported:

	OCTOBER.			
	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.

Miscellaneous.

The American Line Steamship Company has issued a circular list of the revised rates of fare, which does not alter winter rates. The summer season begins with the month of April instead of July, and extends to October. Summer saloon rates are increased from £17 to £20, children half fare, and the age limit is reduced from twelve to eight years. Reductions on return tickets are discontinued. The other Transatlantic companies will adopt the same rates and regulations.

The American Society of Mechanical Engineers, in New York, this week, elected W. R. Warner, of Cleveland, president, and among the vice-presidents, E. S. Cramp, of Philadelphia.

The Reform Club, in its sound money campaign this year, "supplied stereotyped plates and printed supplements amounting to 18,136 pages to newspapers in different parts of the country. A circulation of 4,000,000 was reached in this way at a cost of only $30,000. It was deemed that the most effective way of getting sound-money arguments before the people was through the columns of the newspapers, and the club set out to furnish the arguments from the speeches and writings of leading economists and financiers."

Foreign.

According to a Melbourne dispatch to the London *Times* the deficiency in the wheat crop of Australia will require that country to import 10,000 tons of flour from America, half of which quantity has already been ordered.

A Bombay, India, news agency dispatch to the London *Globe*, says that owing to the famine in the Belapur and Belaghal districts the mortality is steadily increasing.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Alabama Insurance Legislation.

The Supreme Court of the United States has affirmed the constitutionality of the laws of Alabama regulating the conduct of insurance business in that state in the case of Noble et al. vs. Mitchell.

Federal Jurisdiction—Montana.

In the case of Draper vs. The United States, the Federal Supreme Court held that the words in the act admitting Montana to the Union, "and said Indian lands shall remain under the absolute jurisdiction and control of the Congress of the United States," do not give to the courts of the United States in that state jurisdiction over offenses committed on said Indian lands. Therefore, the court sent back to the state court the case of the appellant who was convicted in the Federal court of a murder committed on the Crow reservation.

Railroad—Taxation—Capital.

The Supreme Court of the United States, in the case of Wright, Comptroller, vs. Central Railroad & Banking Company of Georgia, just decided, affirmed the judgment of the Supreme Court of that state, sustaining the claim of the comptroller for certain taxes assessed against the railroad property for 1891, holding that while a tax on the property of a railroad company may be a tax on its capital stock in some instances, it is not such a tax when the distinction between the two was made by the statute, as was done in the charter of the railroad company in this case.

Chattel Mortgage—Filing—Conversion.

The Supreme Court of Minnesota held, in the recent case of Hogan et al. vs. Atlantic Elevator Company, that the filing of a chattel mortgage on a growing crop of grain continues to be constructive notice to all the world, although the grain is threshed and removed from the land on which it was raised; that the fact that the defendant bought the grain for an adequate consideration in the usual course of business was prima facie evidence that it was a purchaser in good faith in the absence of any opposing suspicious circumstances, and that the burden was on the plaintiff who claimed under a chattel mortgage to show that it was executed in good faith, and that refusal to restore goods on demand is only evidence of a conversion, and wherever a conversion can be otherwise proved it is not necessary for a plaintiff to prove a demand and refusal.

Railroad—Elevator—Right of Way.

The Supreme Court of the United States had before it this week the appeal of the Missouri Pacific Railway Company from the decree of the Supreme Court of Nebraska directing the railroad company, at the request of the State Board of Transportation, to permit a party of farmers to erect a grain elevator on its right of way, and itself to construct a switch through it. The court reversed the decision of the state court, saying that it was not a question affecting rates of transportation, not an order compelling the railroad company to erect an elevator, nor a matter affecting equal rights to cross the property from the outside, but a demand that, simply for the convenience of the petitioners, they be permitted to build the elevator on the property of the railroad company, and this, the court were unanimously of opinion, was the taking of private property for private use without the due process of law, and therefore in violation of the plain terms of the Constitution.

Insurance—Loss—Evidence.

The Supreme Court of Texas held, in the recent case of Royal Insurance Company vs. McIntyre, that there can be no total loss of a building so long as a remnant of the structure standing is reasonably adapted for use as a basis upon which to restore the building to the condition in which it was before the injury, and that whether it is so adapted depends upon the question whether a reasonably prudent owner uninsured, desiring such a structure as the one in question before the injury, would, in proceeding to restore the building to its original condition, utilize such remnant as such basis. The suit was brought to recover upon a policy of insurance on a building which the appellee alleged had been totally destroyed. The appellant offered evidence to prove that about 90 per cent. of the material still in the house was uninjured, and that the remainder of said building could be used for reconstruction; that only about 20 per cent. of the building had been destroyed; that the building could be renewed and rebuilt without tearing it down, and that by replacing the damaged portions the building would have been as good as new. This evidence was excluded, and the appellee recovered the full amount of the policy. The Supreme Court reversed the decision of the trial court, holding that the evidence offered was competent.

Note—Corporation—Ultra Vires.

In the case of Kneeland vs. Braintree Street Railroad Company, recently decided by the Supreme Court of Massachusetts, it appeared that in May, 1894, at a meeting of the directors of the railroad company, where it appeared that the property of the company had been attached and subscriptions of stock had not been paid. The directors refused to advance money, and would not resign to allow others to go on unless paid for the franchise and their labor in securing the charter; and then and there they fixed the several sums to be paid by the company to themselves as individuals, and the treasurer issued notes to them for their respective amounts, equaling in all 10 per cent. of the capital stock of the company, each note being for $500. One of these notes came into the possession of the plaintiff before maturity for a valuable consideration and without notice. The Supreme Court, in affirming a judgment in his favor, said: "The defendant, by common law, had the power to incur debt, to contract for the payment of them and to give promissory notes. There is no statute which annulled or limited this power. To give such notes was not ultra vires. By statute the board of directors was the proper body to authorize the giving of promissory notes in the name of the corporation. In the present case the action of the board may have been an abuse of authority, and as against the payee the defendant may have had a defence. This it is unnecessary to determine. The jury found that the plaintiff became the owner of the note before maturity, for value, and without notice of what it was given for or how it was given. It was given in pursuance of a vote of the board of directors. It was therefore the note of the corporation, and not ultra vires, made negotiable by its terms, and the plaintiff may recover upon it."

Local Option—Special Legislation.

The Supreme Court of Minnesota held, in the recent case of State ex rel. Childs et al. vs. Copeland, that a local option law granting charter powers to all the cities of a certain class, to take effect in each city only upon the adoption of the same by such city, contravened the sections of the Constitution prohibiting special legislation as to cities and requiring all laws as to the same to be uniform in their operation throughout the state; that a special law relating to cities cannot be partially repealed by a special law, and the same result cannot be accomplished by a local option law which has merely the same effect, and that there is a distinction between such a local option law, granting such charter powers, and a local option law granting power to adopt a mere by-law or ordinance, the provisions of which are prescribed by the legislature. The constitutional provisions referred to are as follows: "Sec. 32. * * * The legislature shall pass no local or special law regulating the affairs of or incorporating, erecting or changing the lines of any county, city, * * * provided, however, that the inhibitions of local or special laws in this section shall not be construed to prevent the passage of general laws on any of the subjects enumerated. The legislature may repeal any existing special or local law, but shall not amend, extend or modify any of the same. Sec. 34. The legislature shall provide general laws for the transaction of any business that may be prohibited by section 1 of this amendment, and all such laws shall be uniform in their operation throughout the state." The court said: "Under these constitutional provisions is a local option law which gives to each of a class of cities the right to accept or reject certain charter powers constitutional? Is such a general local option law one having a uniform operation throughout the state? How can such a law which goes into effect in one city and does not go into effect in another city of the same class have a uniform operation throughout the state? It seems to us that the legislature cannot bring about diverse charter powers in different cities by enacting any such local option law which may result in giving different cities different charter powers, unless the same result can be accomplished by a direct constitutional law. The mere possibility that all cities of the class may adopt the law will not save it. It must appear at the time the law is passed that it will have a uniform operation throughout the state; that is, that it will take effect in all cities of the class, and that the class is a proper one. The uniform operation of the law cannot be left to any future contingency."

BUSINESS NOTES.

Newfoundland's Mineral Resources.

A correspondent informs the London *Financial Daily News*, apropos of the recent cablegrams concerning the mineral wealth of Newfoundland, that "during the past four months a small private syndicate has been engaged in exploring a property at Silverhill, Placentia bay, with the result that several lodes of galena have been discovered, in some instances outcropping for nearly a mile in length, and running down to about 90 feet—the level of the drives—while there is every probability of the ore extending to a great depth. Samples, assayed on the spot, give from 20 to 60 per cent. of lead and from 17 ounces to 100 ounces silver per ton, which, confirmed by assays made in London, appear to indicate a great future for the mining industry in that hitherto neglected colony."

Belgian Antarctic Expedition.

Lieutenant de Gerlache, the leader of the projected Belgian Antarctic expedition, "says that it will start from Antwerp about July 15 next. The steamer Belgica will carry a three-years' supply of provisions, and will probably be absent about two years. During the first year the expedition will go to the east of Graham Land in George IV. sea, and then winter in Australia. The second year they will probably go in the direction of Victoria Land. 'We intend,' the lieutenant says, 'more especially to devote ourselves to geological and zoological research, taking for this purpose specimens from the various sea depths and the submarine deposits. We shall also estimate the sea temperature at different depths, and, in short, make researches similar to those made by the Challenger and other Antarctic expeditions.'"

Canadian Tariff Revision.

The *Northeastern Lumberman* says: "The Canadians are now occupied with tariff revision as a local government question. A commission in behalf of the Dominion government is at work taking testimony and securing information regarding the existing revenue law, with a view to its change. Some of the Canadians interested in wood pulp urge the putting of pulp-making machinery on the free list. We presume this is because American manufacturers make superior machinery for the wood-pulp and paper industry. Some of the Canadian papers find the uncertainty regarding the changes that may be made in the Canadian tariff as having a most depressing effect upon the country. Business men cannot possibly know how to act regarding imports or exports. Business is being carried on in a hand-to-mouth manner to avoid being caught with large stocks of goods on hand."

Egyptian Irrigation Department.

The Cairo correspondent of the London *Times* says that "Mr. W. E. Garstin, in his report on the work of the Irrigation Department, says that 1895 was a red-letter year for Egyptian agriculture. The chief crops were not only exceptional in yield and quality, but the prices, sugar excepted, ruled considerably higher than during several previous years. The present tendency is to increase sugar cultivation upon an extensive scale, and, with an improved water supply and greater facilities for obtaining manure, the yield can be very largely augmented. In ten years 1,400,000 acres have received drainage at a cost of £421,000, but there still remain 3,000,000 acres, which will require an expenditure of £800,000. Of agricultural roads, 900 miles were completed at the close of 1895. Concessions for laying and working light railways in connection with these roads have been granted over five out of the six provinces of the Delta."

Bank Loans on Farm Products.

Agitation to enlarge the discounting privileges of the Bank of France in favor of the agricultural classes continues. In the new charter of the bank, says an exchange, it is proposed to require that institution to discount the paper of "syndicates of repute." The object, it is well understood in France, is to enable farmers "to obtain advances on future crops, which they are at present unable to do, as the bank cannot discount paper having more than three months to run. The intention is that the local associations of agriculturists should act as intermediaries by indorsing the bills and then passing them on to the Bank of France, which would renew them as they matured. The same facilities would be afforded to workmen's associations. M. Leroy-Beaulieu remarks in the *Economiste Français* that the article is scarcely necessary, as the bank can already discount such bills 'on the same conditions as commerial paper;' that is to say, with a three months' limit, and that establishment would always be the judge as to the solvency of the customer. The *Temps* doubts whether this concession to farmers would constitute a benefit to them." It would seem impossible to take away by the amendment of the charter the privilege and duty of the bank officers to be the absolute judges as to the quantity and quality of the paper discounted at the bank, and as long as that prerogative is not disturbed the proposed amendment to the charter is not a matter of vital importance.

New Russian Iron Works.

Late advices report that M. Bayard, a French mining engineer who lately discovered large deposits of iron ore in the vicinity of Kertch, in the Crimea, has just contracted with the municipality of that town for 19,600 dessiatines of land on a lease of thirty years. Independent of this the municipality has made M. Bayard a free grant of 300 dessiatines of land for the purpose of establishing large iron and engineering works. A newly formed French syndicate is said to have under contemplation the establishment of a large concern in Russia for the construction of railway rolling stock. Plant for the new locomotive works at Nijni Novgorod are already beginning to arrive from America. A shipment of 200 tons of machinery, consisting of two steam hammers, a hydraulic crane and a hydraulic flanging press, have come to hand from the works of the Morgan Engineering Company, of Alliance, Ohio.

Artesian Wells in the American Desert.

Mr. N. H. Darton, of the United States Geological Survey, is quoted in the Denver, Col., *Republican* as saying that there is a practically inexhaustible supply of artesian well water under the plains lying at the foot of the eastern slope of the Rocky mountains, and that the geological survey is mapping this region, showing where and at what depth the water may be found. According to the interview quoted, lying under the foothills on the eastern slope of the Rocky mountains, there is a great sheet of sand or sandstone placed between two layers of clay. The sand holds the water which gets into it in the mountains and the natural dip allows it to run down under the plains between the impermeable clay strata. The depth of this bed varies from 50 to 1,200 feet. It is not probable that the water is as plentiful everywhere as in the well known South Dakota artesian well district; but Mr. Darton thinks that with reservoirs and other provisions for proper economy there is plenty of water to develop the rich desert soil to a profitable degree.

Russia's Wheat and Indian Ryots.

The London *Daily Financial News* says: "Russia's offers to help the famishing ryots of India are now confessed to be far from disinterested. Russian farmers have long been holding their wheat for higher prices, and they see in the needs of India an opportunity for selling their surplus grain at a reasonable profit. There is no need to scorn their assistance because it is offered with an eye to business. If the Indian government can contract with Russia to get all the wheat it wants at a fixed price, the likelihood of a big speculative advance, based on India's assumed needs, may be discounted, and producers throughout the world will not be induced by high prices to increase the acreage under wheat—a process that would ultimately lead to oversupply and a sharp fall in quotations. This long-headed view of the Russians should commend itself to general acceptance, and we would rather see India supplied from Russia than left to the mercies of speculators who have forestalled the markets elsewhere in view of Indian necessities."

Resources of India.

At the London Society of Arts, recently, Major-General Sir Owen Tudor Burne delivered an address on "India: Its Arts, Manufactures and Commerce." The Indian empire, he reminded his hearers, was protected by a military force which numbered about 73,000 European and 146,000 native troops, besides 30,000 volunteers; it was irrigated by nearly 41,000 miles of canals, traversed by nearly 20,000 miles of railways, and covered with a network of about 46,000 miles of telegraph line. There were now 144 cotton mills (containing 34,000 looms and 3,700,000 spindles) in India, employing 140,000 hands. There were also 29 jute mills, with 10,000 looms and 200,000 spindles, employing 75,000 hands, and 2,500 rice, paper, tobacco and other mills and factories, which employed some 300,000 more. Breweries also, of which there were 22, were flourishing. Before the English became the ruling power in India the country did not possess £1,000,000 a year of staples for exportation. She now sold to the world about £70,000,000 of such staples.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade continues in moderate volume, jobbers and wholesalers being agreed there will be no business revival this year. There is some activity in holiday goods. Rains and stormy weather south, and cold and severe weather west and northwest, have checked traffic on interior country roads, and otherwise interfered with the distribution of merchandise, except at some northwestern centers, where more seasonable weather has stimulated the demand for heavy textiles, clothing, hats and shoes. Throughout the central Mississippi valley there has been no increase in demand in wholesale lines, and at the south trade is characterized as dull.

Jobbers of dry goods report that sales for future delivery have fallen off. Shoe manufacturers report that demand has declined compared with preceding weeks, and eastern woolen mills that orders for spring delivery are of moderate volume. Transactions in wool have fallen off, manufacturers buying only as they receive orders. The situation in iron and steel is less satisfactory, with unsettling rumors as to the success of the steel pool, comparatively few sales of staple grades, and no likelihood of revival in demand prior to February.

Sales of open-hearth steel have been made at a parity with grades which have been considered cheaper; nails have again reacted on the dissolution of the pool; tinplate prices have been cut, and Bessemer pig iron has sold down 15c. a ton. The weakness in hides continues, and prices are lower, though thus far without effect on quotations for leather. Petroleum prices have reacted, and quotations are lower for coffee, lard, oats and corn. No material change is reported in prices for pork, print cloths and lumber, while those for turpentine, tobacco, cotton, sugar, wheat and flour are all higher.

November bank clearings reflect the speculative activity following election. Compared with months immediately preceding, the showing is a good one. Only once before in thirteen years has the November total exceeded that for October, and with the exception of January the November total is the heaviest for any month this year. But in spite of this, the total November clearings were smaller than a year ago, and, with New York excluded, quite a heavy falling off is reported. The total clearings at sixty-six cities for November aggregate $4,564,307,804, a decrease from a year ago of 2.8 per cent., an increase over two years ago of 10 per cent., and over November, 1893, of 12 per cent. Outside of New York, the total clearings at all cities fell off nearly 11 per cent. from a year ago. Only two large cities in the country show increases —New York with 3.6 per cent., and Baltimore with 4.3 per cent. The decreases at leading cities vary from a fraction of 1 per cent. in the case of Boston to as high as 22.4 per cent. in the case of Providence. For the eleven months' period, clearings show a decrease of 3.6 per cent. from a year ago, a gain of 12 per cent. over 1894, but a falling off of 7.5 per cent. from the panic year, 1893.

The most bullish feature of BRADSTEET'S monthly report of American available stocks of wheat is found in the net decrease of 618,000 bushels on both coasts during November, the first decrease during November since records have been kept. In November, 1895, the net increase was 10,715,000 bushels; in 1894, 9,816,000 bushels; in 1893, 16,200,000 bushels, and in 1892 it was 17,747,000 bushels. Wheat stocks in the United States and Canada have always continued to grow from week to week, after harvesting, until New Year's, and sometimes later. This year the check to supplies appears to have arrived a month ahead of usual.

Stocks of available wheat in the United States, Canada, afloat for and in Europe December 1 were 148,485,000 bushels, 16,000,000 bushels less than on a like date in 1895, 36,000,000 bushels less than in 1894, 42,000,000 bushels less than in 1893, 27,000,000 bushels less than in 1892, and 9,000,000 bushels less than on December 1, 1891.

Speculative sentiment in the New York stock market exhibits further improvement, though trading is still entirely professional. Liquidation has ceased, however, and pressure from bear operators is replaced by the appearance of renewed bull manipulation in some stocks. Prices show moderate, irregular advance on short covering, and some renewed activity by pool interests. The market is inclined to discount reports of a conservative executive message and decreased fears that Congress will exercise a disturbing effect. Foreign exchange is firm at 4.86¾ @4.87 for sight sterling and 4.83¾ for 60-day bills. The feature in that market is large speculative buying of long sterling and borrowing of call money thereon, such transactions being favored by the fact that money is easier here than in London. Discount in the latter market at the end of the week is, however, ½ to ⅝ per cent. lower at 3⅛ @3 1/16 per cent.

Bank clearings show a heavy gain over last week, 34 per cent., partly owing to the holiday last week and partly to the usual December 1 disbursements. Total clearings for the week at 77 cities in the United States are $1,258,845,000, one-half of 1 per cent. larger than a year ago, 8 per cent. larger than the first week of December, 1894, 12.6 per cent. larger than 1893, but 13 per cent. smaller than in 1892, 5 per cent. smaller than in 1891 and 4 per cent. smaller than in 1890. Outside of New York there is a loss of nearly 4 per cent. as compared with a year ago, and only about one-third of all the cities show increases over the like totals a year ago. Average daily clearings this week at all cities have been about $209,000,000, against $187,000,000 last week, but outside of New York average daily clearings have been only about $89,000,000, against $78,000,000 last week.

Exports of wheat from both coasts of the United States this week (flour included as wheat) amount to 3,653,160 bushels, as compared with 3,753,000 bushels last week, 3,156,000 bushels in the first week of December, 1895, 3,011,000 bushels in the week two years ago, 2,558,000 bushels in the week three years ago, and as compared with 4,404,000 bushels in the corresponding week of 1892. Exports of Indian corn from both coasts of the United States this week amount to 1,768,000 bushels, as compared with 2,920,000 bushels last week, 1,867,000 bushels in the week a year ago, 271,000 bushels two years ago, 1,169,000 bushels three years ago, and as compared with 566,000 bushels in the like week of 1892.

There are 359 business failures reported throughout the United States this week, which is an increase of 63 as compared with last week, 44 as compared with the corresponding week one year ago, 37 as contrasted with the like week in 1894, but a falling off of 24 as compared with the number of business failures in the first week of December, 1893. The increase, as compared with the like period in 1892, is 94. A large proportion of the increased number of failures is reported from the middle and New England states.

General trade at Montreal is reported more active than in the week last year. Jobbers in furs and other winter goods at Toronto report a more active demand and a fair business. General trade at Halifax is about an average at this season. All crops in Nova Scotia have yielded in excess of previous years, with the exception of potatoes. Trade in New Brunswick continues quiet, although a number of vessels are loading with lumber for foreign ports. Bank clearings at Winnipeg, Toronto, Montreal, Hamilton and Halifax amount to $26,810,000 this week, compared with $17,838,000 last week, which was one day short, and as contrasted with $25,591,000 in the corresponding week one year ago. There are 47 business failures reported from the Dominion of Canada this week, 11 more than last week, 8 more than in the week a year ago, 14 more than in the corresponding week two years ago and 19 more than in the like week of 1893.

FINANCIAL.

The Money Market.

Mercantile paper is in such poor supply this week that comparatively little business has been done in that department of the New York loan market. Rates are quoted 3½ @4 per cent. for double-name paper. In connection with time loans the conditions are much the same. The inactivity of the speculative stock market continues to check demand, and the offerings are restricted by knowledge that the few borrowers to be found are inclined to stand out for low rates or to insist on arrangements extending well into the coming year. Rates are quoted 3@3½ per cent. for 30 to 90 days, and 3½ @4 per cent. for longer loans. The only real feature of the market has been the borrowing on call loans by foreign banking houses, with sterling exchange as collateral, arrangements of this kind for considerable amounts being effected at 2 per cent., and it is understood that both sides in the transactions believe that no necessity for disturbing the loans or changing the rate is likely to arise prior to the maturing of the collateral for the same, which occurs in 60 to 90 days. On the Stock Exchange bankers' balances have loaned at from 2@2½ per cent. down as low as 1½ per cent. Last Saturday's bank statement reflected a large movement of funds from the interior to New York, and it is believed that this process—being the increase by outside banks of their balances here—has continued this week on a large scale. The increasing ease of the money market is certainly noticeable, though the absence of demand for money, apart from that created by the borrowings on sterling above referred to, is the chief feature.

Discount Rates and Exchange on New York.

Foreign Exchange.

An easier tendency in the London money market is responsible for the material alteration in the exchange market here. Discount on the other side has declined from 3⅜ @3½ per cent. at the beginning of the week to 2⅞ @3 per cent., while call-money rates in London have also dropped from 3½ to 3 per cent. In consequence of this, long sterling was somewhat firmer, the posted rate being advanced from 4.84 to 4.84½, and actual business in that class of bills rose from 4.83¾ to 4.83¾ @4.84. This movement decreases the difference between long and short bills, and apparently reduces the profit in the semi-speculative purchases of long exchange to be carried till maturity at the low rates on which money can be borrowed in this market. The transactions in question, which are discussed in detail in another column, have, however, continued and are in fact the feature of the market. Otherwise the exchange situation has been decidedly dull, with a fair supply of commercial bills and an exceedingly restricted demand for exchange from mercantile quarters. Posted rates for sight sterling have remained undisturbed at 4.87½, and the actual market for that class of bills has varied from 4 86¾ @4.87 down to 4.86½, with a rally to 4.86¾ @4.87.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

4.84 @ 4.87½	4.84 @ 4.87½	4.84½ @ 4.87½	4.84½ @ 4.87½	4.84½ @ 4.87½	4.84½ @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86½ @ 4.86½	4.86¾ @ 4.87	4.86¾ @ 4.86¾	4.86½ @ 4.86¾	4.86¾ @ 4.86¾	4.85¾ @ 4.87

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83¼ @ 4.83½	4.83½ @ 4.84	4.83¾ @ 4.83¾	4.83½ @ 4.83¾	4.83¾ @ 4.83¾	4.83¾ @ 4.83¾

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.87@4.87¼; commercial bills, 4.82½ @4.82¾; francs, 5.20@5.18½; reichsmarks, 94 13/16 @95 9/16.

The Bank of England discount rate remains unchanged at 4 per cent., while discounts in the open market at London, as described above, have declined from 3½ @3¾ to 3 1/16 per cent., with a corresponding fall in call loans. The bank this week lost £469,000 specie, and its percentage of reserve rose from 53.54 per cent. to 55.81 per cent. Russia has been buying gold in the open market, but the price for gold bars was ⅛d. lower at 77s. 10¾d. per ounce.

The exports (exclusive of specie) from New York to foreign ports for the week ending December 1, were $568,195 below those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$7,153,070	$6,954,127
Previously reported	349,914,507	313,030,203
Since January 1	$357,067,577	$319,984,330

The following table shows the imports (exclusive of specie) at the port of New York for the week ending November 27, 1896:

	1896.	1895.
Dry goods	$1,347,293	$1,969,968
General merchandise	5,753,522	5,365,175
Totals for the week	$7,100,815	$7,335,143
Previously reported	407,665,684	473,222,576
Since January 1	$414,766,499	$480,557,719

The New York Banks.

Last Saturday's bank statement indicated that the return of hoarded gold to institutions has slackened, the increase in the item of specie being only $437,000, as against an increase of $4,206,000 in the preceding week, and $8,266,000 for the week ending November 14. Legal tender holdings, however, were augmented to the extent of $5,253,000, attributed to a flow of money from the interior, making the total gain in cash holdings $5,690,800. The interesting feature of the showing was the loans, which increased $8,856,200. As Wall street is not borrowing largely, and the increased demand for mercantile accommodations would hardly account for such a large increase, it is presumably the effect of the heavy borrowings by foreign banking houses on bills of exchange described elsewhere in this issue. The increase of $14,000,000 in deposits agrees with the gains in loans and cash, and the surplus reserve increases $2,106,650, the figures of the statement comparing as follows with those of the preceding week:

	Nov. 21, '96.	Nov. 28, '96.	Changes.
Loans	$454,962,000	$463,818,200	Inc. $8,856,200
Specie	76,175,400	[illegible]	Inc. 437,600
Legal tenders	72,204,000	[illegible]	Inc. 5,253,200
Deposits	476,295,300	490,034,300	Inc. 14,339,000
Circulation	20,331,900	20,218,000	Dec. 113,900
Total reserve	148,379,400	154,070,200	Inc. 5,690,800
Reserve required	119,073,[illegible]	122,058,575	Inc. 3,584,750
Surplus reserve	29,305,575	31,411,625	Inc. 2,106,050

At the corresponding period last year the surplus reserve was $18,613,300, against $52,820,800 in 1894.

The Boston Banks.

	Nov. 28, '96.	Nov. 21, '96.	Changes.
Loans	$161,823,000	$160,817,000	Inc. $1,106,000

Specie	9,660,000	9,495,000	Inc. 165,000
Surplus reserve	2,364,057	2,795,000	Dec. 430,943

Silver.

The market quotations for silver eased fractionally at the beginning of the week, and since then have remained almost stationary. Generally the situation is devoid of features, and the principal interest in it attaches to the question whether the Indian government will buy silver in connection with the financial pressure in that country due to the famine. Silver bullion certificates here are neglected.

THE STOCK MARKETS.

The New York Stock Market.

A firmer tone has been exhibited in the speculative share market during the present week. The quality of the transactions has not improved. In the main they are still the work of professional traders, and public participation, as gauged by the inactivity of commission brokers, is almost entirely lacking. On the other hand, liquidation of long holdings of stocks has practically ceased, and the bears find that their efforts to depress prices by artificial manipulation does not bring out real stocks, but simply increases the short interest. The latter had, in fact, appeared to be growing excessive, and the position of the market has been one in which its liability to become oversold is an important factor. It would seem that some of the larger bear interests have closed their speculative lines on that side of the account, and that so far as operations of that sort are concerned they are due to the disposition which the board-room element and the smaller class of professional speculators always exhibit to sell the market short when dulness is the pronounced feature.

The more hopeful feeling which animates the market seems to be due to a revision of speculative opinion regarding the probable tenor and effects of the coming presidential message, particularly in its treatment of the Cuban question. The current reports from Washington indicate that it will, so far as concerns this matter, be a conservative document, which the street construes as favorable to the market. There is, of course, uncertainty about the course of Congress on the Cuban and other matters, but a feeling has grown that the short session may not be productive of any very positive action, though the larger speculative interests, which, as stated above, have ceased to act on the bear side, show an indisposition to adopt any positive course until Congress meets and there is some definite basis on which to judge of its policy. It must, however, be noted that this has not deterred certain interests from instituting bullish manipulations in their own specialties, more particularly in stocks in which the existence of any considerable volume of bear contracts afforded opportunity for marking up prices on the shorts.

Railroad earnings for the latest periods reported have been poor, but in some instances, notably that of the St. Paul road for the fourth week of November and the Burlington properties for the month of October, the decreases were not as large as the bear party in the street had hoped for or even predicted. In railroad circles the impression seems to be that disappointing results must be expected for the balance of the year, and perhaps till 1897 is pretty well advanced, although they are said to be preparing for heavy traffic and consequent earnings in the late winter and spring. This tendency agrees with the general feeling in speculative circles that the market, whatever its present hesitation may be, will probably endeavor to discount the improvement in railroad and general business soon after the beginning of the new year.

London has not been a decided factor in our market, but at the close of the week Americans were the strong features in that market, and some foreign purchasing made its appearance here. The continued decline in the Kaffir mining stocks has been an obstacle to speculative activity in any department of the London market, but the fact that the firmness of the money market there has relaxed tends to improve the general situation, while the fact that the condition of our money market has permitted of borrowings here on sterling exchange to a large amount, thereby relieving London of the burden of financing part of the enormous imports of our breadstuffs for this season, tends to create confidence in the financial position of this country.

The money market has indeed been so dull that these borrowings by bankers on sterling have been of considerable interest, and have furnished employment for considerable portions of the present accumulation of idle funds. Wall street demands for money have been limited by the prevalent speculative inactivity, and call money this week has ranged in the neighborhood of 2 per cent. Under such conditions and with the knowledge that the buying of sterling exchange has been mainly for the speculative purposes above referred to, the firmness of exchange rates have excited little or no apprehension, it being also recognized that current quotations for demand bills on London have not risen to within a cent of the gold export point.

The trading in the market has been well distributed. One of the features has been the strength and activity of Lake Shore and the other Vanderbilt stocks. Omaha, in particular, was unusually active, the common rising from 45 to 49¾ on confident predictions that a dividend will be paid on it. In the grangers the feature has been the combined effort by the bears to depress Burlington and St. Paul. The former, after touching 77⅜, rallied to 79½, and St. Paul was also worked down from 74⅞ to 73½, only to rebound to 75⅝, the extensive short interest in both stocks being an important factor in the general market. Manhattan was irregular, declining to 93½, and rallying to 97½ on the covering of shorts, while further rumors have been put in circulation regarding the possibility of a deal with the Metropolitan Traction. Reading has been more active, and at the end of the week showed manipulative strength, and recovered from 27⅝ to 29¾. Southern Railway Preferred was a feature. Its advance from 27⅝ to 31⅜ was due to rumors of a 1 per cent. dividend which was declared on Friday. In the industrials, Sugar was the feature. The stock has been pressed for sale on rumors of attacks on the company in the approaching Congress, and on the news that a large opposition refinery is to be erected at Brooklyn, and after considerable fluctuations declined on Friday to 115⅝. Leather preferred was influenced adversely by reports of unfavorable conditions in the trade. Chicago Gas had pool support, and after touching 71½ rallied to 77¼ with reports that the prospects for carrying out the consolidation plan have improved. Laclede Gas was weak, on expectations of an adverse decision by the Supreme Court, but interest in it subsided when no opinion was handed down and the possibility of a reargument of the case was suggested. Consolidated Gas shows renewed strength on reports that the New York gas organizations will form a working arrangement. In American Spirits the chief object of attention was the meeting of the distilling magnates at Chicago, though hopes of an agreement for harmonious arrangements are modified by the refusal of representatives of some important concerns to attend.

Boston Stock Market.

There has been a little more activity in stocks, and prices show weakness. Atchison closes unchanged, while Chicago, Burlington & Quincy has declined ¼, and New York, New Haven & Hartford Railroad ½. Boston & Montana has ruled quiet, and closes ½ lower, with Butte & Boston 1½ higher. Sugar has lost 1½, while Bay State Gas has not changed. United States Leather preferred closes 1⅞ points higher for the week.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending Price Dec. 3, 1896.	Price Nov. 25, 1896.	Sales Dec. 3, 1896.	Sales Nov. 25, 1896.

General Mention.

The following directors of The American Cotton Oil Company were elected at the annual meeting held December 3, 1896: Edward D. Adams, New York city; William Barbour, New York city; J. Fred'k Chamberlin, Summit, N. J.; Thomas R. Chaney, New York city; Charles F. Clark, New York city; M. Frank, Atlanta, Ga.; James A. Garland, New York city; Garret A. Hobart, Paterson, N. J.; Charles Lanier, New York city; John H. Maxon, St. Louis, Mo.; George A. Morrison, New York city; Robert F. Munro, New York city; J. Kennedy Tod, New York city; E. Urquhart, New York city; R. T. Wilson, New York city.

TRADE QUIET.

WEATHER INTERFERES WITH THE DISTRIBUTION OF STAPLE MERCHANDISE IN MANY DIRECTIONS.

AN ACTIVE HOLIDAY DEMAND.

NO GENERAL REVIVAL EXPECTED PRIOR TO 1897.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, December 4.—There continues a moderate business in most departments of the merchandise market, with general operations quiet. The money market is dull and easier, with large surplus of funds, and little demand. Commercial paper of desirable grade is in limited supply and quoted at 3¼@4½ per cent., with collateral loans on four months at about 4 per cent. For call money about 2½@3 per cent. is quoted, the demand from brokers being largely for call money. The boot and shoe market is quiet, but women's light goods are quite well ordered ahead for spring, while manufacturers of men's wear have also taken quite liberal orders. Quotations for the latter are about 10@15c. above the low point, but buyers hesitate at the advance. Leather is held firm, but is in moderate demand, as manufacturers are forced to have supplies. Hides have ruled dull and lower in price, but offerings continue moderate. Lumber is in fair demand and steady.

Philadelphia, December 4.—Quiet reigns in manufacturing circles; the feeling is that there will be no revival this year. Dry goods move slowly, but retailers are ordering more freely than a month ago. Manufacturers of glass bottles are busy. Leather is dull. Hides are weak and lower, with light demand. Tobacco has a steadier market, with a slight advance and more inquiry for goods. Collections are easier and renewals less frequent.

Pittsburgh, December 4.—The volume of jobbing business is not as large as last week, but prices are well maintained. Christmas shoppers are in evidence now, and retail dealers generally look forward to a good holiday trade. Collections are reported unsatisfactory, and money is rather tight, the

banks taking practically no paper aside from that of their regular customers. No improvement is noted in iron. Only few sales are reported, and no improvement is now looked for before the first of the year. Prices have changed but little since last week.

Baltimore, December 4.—Jobbers report business quiet. Boot and shoe men, also clothing men, have travelers out on the road, and report business not above the ordinary, the weather being unfavorable for some weeks past. Collections continue fair.

West and Northwest.

Cincinnati, December 4.—Business is dull.

Cleveland, December 4.—The season is too far advanced for any material change in the volume of general merchandise trade, and business generally continues quiet. The general situation, however, is improved in tone, and the outlook for spring is regarded as very encouraging.

Detroit, December 4.—A better trade is reported in clothing and heavy goods with the advent of more seasonable weather. In other lines trade is fair. Collections do not improve.

Chicago, December 4.—With the exception of the liberal orders for holiday goods, there has been no increase in the sales by jobbers and manufacturers this week, and there is the usual quietness that prevails at this season. Sales, on the whole, are about equal to last year, and in dry goods and clothing traveling men are starting on spring goods with fair success. There is a slowness in the iron and steel trade reported by manufacturers, but sales from store are of a liberal volume, with indications of an increase, as the large consumers are beginning to figure on future supplies. Sales of pig iron are in small lots, and former prices prevail. Nails are lower, and the decline has stimulatated purchases. The call for groceries is up to about the usual average. Leather is dull, but tanners maintain former price despite the weakness and decline of ½c. in hides. Lumber is held firmly, with a better general demand. Butter and eggs have advanced owing to light receipts, and poultry is firm, with a good trade. The recent cold snap has resulted in severe losses to shippers of apples, many carloads being frozen. Wool receipts, 116,845 pounds. The demand for money is light, grain dealers using little. Inquiry from cotton handlers is falling off, and packers are the best borrowers. Country and local deposits are increasing. Loans of state banks show a good decrease from September 1. Collections generally are satisfactory.

Louisville, December 4.—Jobbers and manufacturers in most lines report a very fair demand, and collections are satisfactory. Favorable weather and the approach of the holidays have contributed to a more active retail trade. Better grades of leaf tobacco are selling well.

St. Louis, December 4.—Weather conditions have been favorable for the sale of heavier textiles, boots and shoes, and rubber goods. Orders are principally by mail and are of encouraging proportions. The leather market continues active despite the weakness of hides, and the outlook at present is favorable for at least a continuation of present prices for the finished product. Holiday goods are moving with a greater degree of freedom than at the same period of last year. Orders for pig iron are small. Inquiries, however, cover some good-sized lots, and may develop some betterment later. Furs are in good demand and receipts of better quality. The fruit and vegetable markets are overstocked but there is no changes in values. Iron bars and iron and steel sheets are in good demand. Tin plates are being bought ahead by the large ooncerns, and there are a few orders in sight for December shipment.

Kansas City, December 4.—Jobbers and retailers report very quiet trade. Collections are fair. Live stock receipts are very heavy and values very good.

Milwaukee, December 4.—There is no perceptible permanent improvement in general trade as yet noticeable, though staples and holiday goods are moving with more activity than heretofore. Collections are rather slow.

St. Paul, December 4.—Stormy winter weather has so impeded traffic in some sections as to materially affect trade, and in all lines the volume of business done falls short of a week ago, though the arrival of delayed mails has helped out some during the past two days. Collections are in sympathy with trade.

Minneapolis, December 4.—Colder weather again stimulates general business, but there are no unusual features.

Duluth, December 4.—Trade has been quiet during the week, due chiefly to the severe cold weather prevailing throughout the northwest. There is an increased activity in iron mining, and a number of men are being sent into the woods,

Omaha, December 4.—Trade shows a slight improvement. Collections are very dull.

Sioux Falls, December 4.—Wholesalers note no change, the rule being filling-in orders. Retail trade has been quiet on account of storms, but has a healthy tone. Collections continue good.

Southern Cities.

Savannah, December 4.—The trade report city business dull on account of heavy rains, but orders from the country are fair. Collections are a little slow. The market is firm in spirits of turpentine, with an advancing tendency. Heavy rains have delayed receipts.

Atlanta, December 4.—Trade is quiet among retailers in all lines. Jobbers report collections only fair.

Augusta, December 4.—Business has been greatly retarded by severe rain and snowstorms during the past three days. Wholesale and retail trade, in consequence, is only moderate.

Jacksonville, December 4.—The trade report is but little changed. Collections are fair, and a brisk holiday trade is anticipated. The movement in this direction is about to begin.

Birmingham, December 4.—Business has improved somewhat with the cold weather. Transactions in iron are for demand only. The advanced price of some weeks ago has been practically maintained. Coal sales have increased somewhat. Collections are disappointing.

Chattanooga, December 4.—Trade for the week is dull. No particular cause is assigned for the dearth.

Nashville, December 4.—Trade is active in groceries and holiday lines; otherwise, it is quiet. Colder weather has stimulated retail dry goods and clothing, in which lines trade was lagging. Country collections are good.

Memphis, December 4.—General trade continues fair. Collections continue satisfactory.

New Orleans, December 4.—Trade has been restricted by severe weather. The country roads are impassable, but no serious damage has been done to crops. The outlook is favorable to good filling-in orders. Sugar is marketing actively on a fairly strong market. Cotton is working in a narrow groove. Rice is firm, but quiet. There is a liberal movement of western grain for export.

Galveston, December 4.—Principal trade now is confined to filling-in orders and holiday goods. Merchants are pushing collections with fair success.

Pacific Coast.

San Francisco, December 4.—No new features are reported in commercial lines. Exports of general merchandise are comparatively heavy. Produce, particularly grain, is active. Grapes are plentiful and cheaper. Collections are difficult.

Portland, December 4.—Transportation has been much interrupted, and country business is very dull in consequence. The weather has also been unfavorable to local business. Regular traffic has been completely resumed. Holiday lines show some activity. The potato crop has been damaged by cold, and prices are advancing.

Tacoma, December 4.—Exports for November have been the largest recorded for any single month, amounting to $1,300,000 of wheat, flour, coal, lumber and merchandise. General trade is only fair, being interfered with by bad weather and stoppage of traffic.

Seattle, December 4.—November exports are the largest in the history of the port. General trade, except in rubber goods, stoves and hardware, has been retarded owing to local weather conditions.

Canada.

Toronto, December 4.—There is some improvement in wholesale trade. There is a better demand for heavy winter goods, furs, etc., and also an active trade in fancy goods for the holidays. Woolens are firm. Remittances are fair.

Montreal, December 4.—Trade throughout the province is fairly active and slightly better than last year. Several concerns have already completed stocktaking. Results, as a rule, are not very satisfactory, for although the fall trade has been satisfactory, the earlier months were decidedly disappointing. Iron and hardware have been active, with distinct advances, especially in Canada tinplates. Receipts of beef hides are heavy and stock is accumulating, but prices have declined. Lambskins show advances, with good demand. Supplies of fish have been large and business has increased, but owing to increased receipts prices have weakened. Prices for produce are low. The holiday trade has commenced, with fair prospects for a good month. Collections are fair.

Halifax, December 4.—General business is about up to the average for this season of the year. Collections are hardly satisfactory. Country produce is plentiful, and prices low. Provisions are dull and low. Large shipments of fish are being made. The Nova Scotia crops for the past season have been above the average in nearly everything except potatoes, which, ownig to the continued rains, are below the average. The fruit crop is the greatest in the history of the province. St. John, N. B., reports business quiet, with very little change in market quotations. Quite a number of vessels are loading lumber for foreign ports. Ocean freights are weaker.

Dry Goods.

The volume of business is quiet in most departments, with general conditions about steady. Cotton goods are firm, with a moderate call for supplies. Raw cotton is steady, and manufacturers are not disposed to force sales of goods at the expense of price, while buyers are not inclined to stock ahead to any extent under present conditions. Printed fabrics are quiet, with the general market steady. American shirtings and indigo blues and Merrimack shirtings advanced ¼c. December 1. Ginghams are yet quiet, with staples steady, but fancies are listless. The market for dress woolens is steady, with the tone of values firm. Moderate orders for spring are being taken, but some mills are quite well sold ahead. Men's-wear woolens are quiet. The spring season is about over. Manufacturers are preparing fall samples, and in some instances have taken moderate orders for overcoatings. Within the next two weeks samples for fall will be freely shown, if clothiers are ready.

Wool.

Trade has ruled quiet, and the volume of business shows considerable falling off from last week's activity. Manufacturers are yet taking supplies of raw material as they receive orders for goods, but the market for the latter is quiet. Territory wools are quoted at about 32@34c. for good lines of fine medium and fine scoured, with choice staple up to 35c. Medium territories range from 28@30c., scoured, for good lines. Fleece wools are quiet, but held firm at 19@20c. for washed XX and above, while No. 1 Ohio washed range from 20@22c., the former for clothing. Quarter and three-eighths blood unwashed fleeces are quotable at 16@17c. for combing and 15@16c. for clothing, with a moderate sale. Australian wools are firm in sympathy with the strong market in London, with a fair demand noted. Carpet wools are quiet but firm.

COMMERCE OF THE BRITISH EMPIRE.

Mr. Chamberlain, in responding recently to the toast of "Her Majesty's Ministers," at a banquet given in his honor by the Birmingham Chamber of Commerce, "said the most important duty and most absorbing care of the government was the development and maintenance of our vast agricultural, manufacturing and commercial enterprise. Commerce was, in fact, the greatest of political interests. He claimed that the present government had endeavored, not unsuccessfully, to increase and develop the free markets of the world. We alone appeared to have been successful in making colonial acquisitions profitable. Additions to the colonial possessions of France and Germany continued to add heavily to the burdens of the taxpayers, whereas ours became self-supporting in a very short time. Results like these had justified our acquisition of the large extent of territory which had been forced upon us. Lord Rosebery had referred to the fact that in the last few years we had added 2,600,000 square miles to our territories. But for the action of other nations it might have been wiser for us to have proceeded more gradually, developing the country we already possessed before seeking this vast extension. But if we had remained passive the greater part of Africa would have been occupied by our commercial rivals, who would have begun by closing this great potential market to British trade. There was one fact, the proper consideration of which would, he thought, very much modify the jealousy with which foreign nations regarded our extension. As fast as we acquired new territory we developed it as trustees of civilization for the commerce of the world. We offer in all our markets the same opportunities, the same open field to foreigners as to our own subjects. Every other nation as fast as it acquired new territory—acting most mistakenly even in their own interests—sought to secure the monopoly for its own products by preferential and artificial methods. It was a matter of life and death to us that we should not be forestalled in the markets of the future to which we might have learned to look for the extension of our trade and even for the subsistence of our people.

"In the last twelve months, Mr. Chamberlain said, the present government had redeemed from barbarism in Ashanti and in the Soudan two provinces ruled by two 'great assassins,' the number of whose victims was tenfold the number of all that had suffered by Turkish cruelty in the last few years. Mr. Chamberlain said he ventured to recommend to the House of Commons as a true, wise and economical policy the development of the imperial estates. We had to find new markets and to develop old ones. The extremely pessimistic statements that had been made of late as to the position and prospects of British trade would not bear examination, but we must continue to be watchful of our interests. Our exports to our principal colonies and dependencies rose from 105,000,000 in 1884–85, to 113,000,000 in 1893–94, a rise of 8,000,000. The exports from Germany rose from 1,500,000 to 4,500,000. The German percentage of increase was very large, but the actual increase was only about one-third of the increase of British products, and the German increase all took place in the first five or six years of the period; there had been no increase in the last five years. Referring to the circular which had been issued to all the governors of our colonies, Mr. Chamberlain said the replies contained an immense amount of most valuable information, and would give to every manufacturer and every workingman an opportunity of estimating the competition with which he was threatened. They showed that in certain branches of trade we had lost trade which we ought to have maintained. The principal reason was the too great independence of our manufacturers and their workpeople. Our competitors abroad had shown a greater willingness to consult the wishes of their customers. It seemed to be a theory with certain of our manufacturers that consumers were sent into the world by Providence in order to take the things which they (the manufacturers) made, and that there was no corresponding obligation at all upon the manufacturers to make the goods that the consumers wanted."

AFRICAN GOLD OUTPUT.

The Johannesburg Chamber of Mines and the Association of Mines place the aggregate yield of gold from the Rand mines during September at 202,561 ounces, comparing with the revised figures 213,418 ounces for August and 194,764 ounces for the corresponding month of last year. There was, therefore, a decrease of 10,857 ounces as compared with August, but an increase of 7,797 ounces over the total for September last year. From the subjoined table the monthly yield since the end of 1891 will be seen:

	Ounces				
	1896.	1895.	1894.	1893.	1892.
January	148,178	177,463	149,814	108,374	84,560
February	167,018	169,295	151,870	93,252	86,649
March	173,952	184,945	165,372	111,474	93,244
April	170,767	186,323	168,745	112,053	95,562
May	195,008	194,580	169,773	116,911	99,436
June	193,640	200,941	168,162	122,967	103,252
July	203,873	199,453	167,953	126,169	101,279
August	213,418	203,573	174,977	136,069	102,322
September	202,561	194,764	176,707	129,585	107,852
October	....	192,652	173,378	136,682	112,167
November	....	195,218	175,304	138,640	106,795
December	....	178,428	182,104	146,357	117,748
Totals	1,674,355	2,277,635	2,024,159	1,478,473	1,210,867

For the nine months the aggregate production is still 37,182 ounces short of that for the corresponding period of last year. But as in the last quarter of 1895 the returns were considerably affected by the scarcity of labor and the inadequate supply of water, it seems probable that the deficiency in the production will be made up by the close of the year, for though for some days a strike took place at some half a dozen of the mines owing to the new regulations as to the rates of pay and hours of work among the "boys," it is reported that the difficulty is now practically over.

BRITISH RAILWAY RETURNS FOR 1895.

The Glasgow *Herald* says: "The general report to the Board of Trade on the railway companies of the United Kingdom for the year 1895 is supplementary to the tables which were examined here a month ago. In so far as these tables are concerned we do not need to go over the ground again, but some new points of interest emerge. Thus the total amount of paid-up capital in the various descriptions of stocks and loans—£1,001,110,221—is 15¾ millions in excess of the total in 1894, which, again, was 14 millions in excess of the total in 1893. These increases, though large, are not so large as the average of the few years preceding, and as regards last year, 7½ millions of the increase was only nominal, and due to conversions and consolidations of stock—as, for instance, the conversion of the debentures of the Lancashire and Yorkshire and of the preferences of the North British. The extent to which capital has been swollen by such nominal additions in recent years is remarkable. Out of the total paid-up capital of £1,001,110,221 we find no less than 88½ millions representing such nominal additions in the conversion, consolidation and division of stocks, namely, 27.2 millions in ordinary stock, 29.5 millions in guaranteed and preference stocks, and 31.8 millions in loans and debenture stocks. These additions represent nearly 9 per cent. of the total paid-up capital. The former tables did not show the returns on the various classes of stocks, but these details are now supplied. Thus, the amount of loans and debentures is £280,626,800, and the aggregate dividend paid on these stocks was £10,229,122, or equal to 3.65 per cent. Guaranteed and preference stocks amount to £356,446,016, on which the dividends paid were £14,391,604, or equal to 4.04 per cent. And ordinary stock amounts to £364,037,405, on which £14,387,142 was paid, equal to 3.95 per cent. These are the averages, and the average of the averages—a total dividend of £39,007,868 on a total capital of £1,001,110,221—is 3 90 per cent. In the former return the total net receipts were given at £38,046,065, and the difference of a million or so seems due to the overlapping of accounts in cases in which companies have invested capital in the stocks of other companies. In the present tables the averages are arrived at from the same basis over a term of years, so the comparison remains good. Thus in 1886 the average return was 4.08 per cent., in 1887 4.13 per cent., in 1888 4.17 per cent., in 1889 4.32 per cent., in 1890 4.24 per cent., in 1891 4.10 per cent., in 1892 3.98 per cent., in 1893 3 74 per cent., in 1894 3.87 per cent., and in 1895 3.90 per cent. This looks very much like a law of diminishing returns, for the fractional recoveries in 1894 and 1895 hardly count as a return of the backward current since 1889. The traffic movements and working expenditure of the railways have already been examined here, and it is not necessary to follow Sir Robert Giffen's elaborate critical analysis. The general position, however, may be summed up in comparison with 1894:

	1895.	1894.
Mileage	21,174	20,908
Capital	£1,001,110,221	£935,387,355
Per mile open	47,280	47,130
Ordinary capital	364,037,405	360,086,684
Passenger receipts	37,361,162	36,495,488
Goods receipts	44,034,885	43,379,078
Miscellaneous receipts	4,526,655	4,430,265
Total receipts	85,922,702	84,310,831
Working expenditure	47,876,637	47,208,313
Net earnings	38,046,065	37,102,518
Receipts per train mile	57.65d.	57.56d.
Expenditure per train mile	32.34d.	32.40d.

This comparison shows improvement under every head, and an improvement on totals which were the largest on record. The reporters say that so far as the present year is concerned there is every reason to expect even more satisfactory results, and experience so far has justified that expectation."

DANISH VICE-CONSULAR CIRCULAR.

Louisville, Ky., November 28.—Owing to the labor troubles which are disturbing the regularity of shipments at Hamburg and other German seaports, I deem it advisable to call the attention of American exporters, who are shipping their goods via these ports, to the superior advantages offered by the Copenhagen free port at Copenhagen, Denmark. It is not generally known, but it is nevertheless an established fact, that large sums of money have been expended in improving the harbor facilities at Copenhagen until the shipping facilities at that port are now unexcelled.

The Copenhagen free port has recently been built at a large expense, and has every modern facility for the expeditious handling of general cargo, whether in transit for Baltic ports or for Denmark proper. These warehouses are capacious, well ventilated and carefully protected as regards fire and other accidents. These warehouses are heated by steam, lighted by electricity, and all derricks, elevators, cranes, etc., which are used for transferring cargo from vessels to warehouses, or from vessels to cars, which run alongside of the warehouses, are operated by electricity generated at the central power house some distance from the warehouse buildings.

The rates of charges are more moderate than those in force at the principal German seaports, and the service for handling cargo is second to none. Insurance rates on cargo passing through these warehouses are extremely low, and, when necessary, advances may be obtained from Copenhagen banks on cargoes stored in the free port to the extent of 75 per cent. of the value of the merchandise thus stored. Rates of interest on such advances are 3½ per cent. per annum.

There is from twenty-five to thirty feet of water at Copenhagen and the Copenhagen free port, which admits vessels of great draft. In fact, every facility is afforded at this new and modern distributing point for the handling of cargo in transit for Sweden, Finland, Russia and the German and Prussian provinces bordering on the Baltic.

Numerous vessels are in service from Copenhagen to these different ports, which insures a prompt distribution and forwarding of shipments. There are several prominent lines of steamships operating between this country and Copenhagen, among which may be mentioned the United Steamship Company, New Orleans-Copenhagen, Thingvalla Steamship Company, New York-Copenhagen, and the Scandia line out of New York. In addition to these there are many other lines which would willingly extend their routes to Copenhagen in order to increase business in that direction, and it is reasonable to suppose also that special vessels would be dispatched from Newport News at short notice. It would be well for American exporters to give this subject their serious thought and consideration. Upon application I will take pleasure in furnishing interested parties with a schedule of charges at the free port, and any other information pertinent to the subject.

CHARLES EARL CURRIE,
Royal Danish Vice-Consul.

SEVENTH ANNUAL REPORT

TO THE STOCKHOLDERS OF

THE AMERICAN COTTON OIL COMPANY

FOR THE

Fiscal Year ending August 31, 1896.

THE AMERICAN COTTON OIL COMPANY,
EXECUTIVE OFFICES, NO. 46 CEDAR STREET,
NEW YORK, DECEMBER 3rd, 1896.

TO THE STOCKHOLDERS OF
THE AMERICAN COTTON OIL COMPANY:

The Directors submit herewith their Seventh Annual Report and Statement of Accounts for the fiscal year ending August 31st, 1896.

SHARE CAPITAL.

The amount of the Capital Stock, Common and Preferred, issued and outstanding, remains unchanged.

DEBENTURE BONDS.

Of the $4,000,000 Debenture Bonds originally issued, $932,000 have been redeemed and canceled, leaving outstanding $3,068,000.

In conformity with authority given by the Stockholders at their last Annual Meeting, the Directors decided that it was for the best interests of the Company to discontinue the redemption of Debenture Bonds. It is considered that the redemption of the Bonds by the payment of ten per cent. premium involves a needless outlay in view of the fact that they have only four years to run, and it is believed that more favorable arrangements can be made before or at maturity.

MANUFACTURING PROPERTIES.

All of the properties of the Organization are absolutely free from mortgage or other lien, and there are no liabilities on loans or for Bills Payable.

During the year the Permanent Investment Account has been increased by the sum of $116,599.80, being cost of additions to properties less realizations from sales of Real Estate, Machinery, etc., and the amount written off to cover estimated depreciation of Transportation Equipment.

The sum of $246,963.11 has been expended in repairs of the properties, and is included in the expenses of manufacturing and operation for the year.

Our large factories in the City of St. Louis suffered damage from the cyclone of May 27th last. The cost of repairing same has been charged to expenses of manufacturing and operation. In view of the large value of the properties exposed, it is fortunate that the loss sustained was comparatively small.

The work of equipping the properties with Automatic Sprinklers, Water Tanks and other appliances for protection against fire, has been continued during the year.

The high insurance standard thus reached enabled the organization to obtain insurance at much lower rates than has been possible heretofore.

PROFIT AND LOSS.

The net profits for the fiscal year, after payment of the interest on Debenture Bonds ($245,440), amounted to $334,799.10.

Notwithstanding the unprecedented business conditions, the losses from bad debts during the year amounted to less than one-fourth of one per cent.

ACTIVE WORKING CAPITAL.

Cash in Banks, August 31st, 1896	$1,572,822 82
Bills and Accounts Receivable, deducting Current Liabilities	379,804 00
Products, Raw Materials and Supplies, all marketable	2,581,861 35
Total net amount of Working Capital	$4,534,488 17

STATEMENT OF CAPITALIZATION, LIABILITIES AND ASSETS.

	August 31, 1896.

Balance of General Profit and Loss Account, August 31, 1896		$5,907,622 85

REMARKS.

It is scarcely necessary to remind you that during the period covered by the foregoing report the business of the entire country has been subjected to a serious and prolonged strain. Your Company has not only suffered from the general depression, but in addition has had to contend with an unprecedented depreciation in values of its most important competitive articles.

Early in the fiscal year it became apparent to your Directors that the question of profits must be subservient to that of credit and financial stability; and availing themselves of the opportunity, they created economies in accordance with existing conditions, and minimized the outstanding indebtedness. The result has been to establish a substantial saving in the administration and operating expenses of the Company, and the Balance Sheet shows not only no Bills Payable, but a large cash balance available for the requirements of the Company in beginning the business of the new year.

Your Directors are keenly impressed with the fact that the inevitable trend of business, affecting all industrial enterprises, is in the direction of greater volume, closer margin of profits, and increasing competition. In order to successfully cope with these conditions and hold your Company's position in the markets of the world, they have adopted an energetic policy and enforced an economical administration.

The Food Products of the Company are the cheapest of all commodities used for similar purposes, the demand for them is broadening, and the tendency in favor of vegetable as against animal edible fats continues.

While the country has passed through a trying business period, it is gratifying to be able to report that your Company has continuously enjoyed the highest credit, has remained financially impregnable, and stands fully equipped and ready to take advantage of every improvement in the general business situation.

A change for the better has appeared in the general commercial conditions since the end of the fiscal year covered by this report, and has already marked an improvement in the earnings of your Company, giving promise of returning prosperity.

In submitting their Annual Report, your Directors feel that the outcome of the year's operations and the maintenance of trade, secured in the face of extraordinary business conditions prevailing throughout the entire period, should be satisfactory to the Stockholders.

By order of the Board of Directors.

GEORGE A. MORRISON,
Chairman of the Board.

CENTRAL PACIFIC RAILROAD CO.

First Mtge. Gold Bonds.

Office of the Central Pacific Railroad Co.,
NEW YORK, Nov. 25, 1896.

This Company has made arrangements to extend its $3,997,000 First Mortgage Bonds, maturing Jan. 1, 1897, so that the Principal thereof shall become payable in one year from that date, viz.: on January 1, 1898, with interest meanwhile payable semi-annually January 1 and July 1, at the rate of 5 per cent. per annum. Principal and Interest payable in United States Gold Coin.

The right is reserved to redeem the Bonds so extended at any time, on paying to the Bondholders the par or face value of the Bonds and Interest thereon at the rate of 6 per cent. per annum from January 1, 1897, in United States Gold Coin, less such interest accrued subsequent to that date as may have been paid thereon before such redemption thereof.

The right of the Bondholders to avail themselves of such extension has been reserved to such holders as, PRIOR TO DEC. 15th, 1896, shall deposit their Bonds for that purpose with MESSRS. SPEYER & CO., NEW YORK, or with MESSRS. SPEYER BROTHERS, LONDON, or MR. LAZ. SPEYER ELLISSEN, FRANKFORT ON MAIN, or MESSRS. TEIXEIRA DE MATTOS BROTHERS, AMSTERDAM.

The extended Bonds will be stamped to show the extension, and new Coupon Sheets will be annexed, representing future interest.

Copies of the Extension Agreement can be obtained at the Company's Office and at the office of the Bankers above mentioned.

The present extension is made to the date of maturity of the latest maturing Central Pacific First Mortgage Bonds, on or before which date the Company expects to arrange a long extension of the entire First Mortgage issue.

C. P. HUNTINGTON, Vice-President.

UNTIL DECEMBER 10TH, A BONUS OF $5 ON EACH BOND OF $1,000 WILL BE PAID BY US TO BONDHOLDERS UPON PRESENTATION OF THEIR BONDS AT OUR OFFICE FOR EXTENSION UNDER THE FOREGOING NOTICE.

SPEYER & CO.,
30 BROAD STREET.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 12, 1896.

No incidents of special interest marked the opening of Congress on Monday last. The impression seems to prevail generally that it will not do very much beyond passing the appropriation bills, and perhaps launching upon a discussion of the Cuban question. Three resolutions dealing with the situation in the island were introduced in the Senate, one recognizing the independence of Cuba, another directing its occupation by the military forces of the United States until the people can form a government, and another granting belligerent rights to the insurgents. In the Senate a motion to take up the Dingley bill was carried, but nothing has yet come of it, while the Republican members of the House Committee of Ways and Means have decided to go ahead with the preparation of a tariff bill, an action which seems to look towards the abandonment of the Dingley bill. Among the measures passed by the House were bills allowing the use of private postal cards; authorizing the Postmaster-General to allow an indemnity, not to exceed $10 in any one case, for the loss of registered packages of letters, and permitting the appointment of letter carriers at offices where the free delivery system is not established, the cost thereof to be borne by the patrons.

Currency reform continues to receive attention at the hands of commercial organizations. Among those taking action in relation to the subject recently is the Baltimore Board of Trade, which adopted a series of resolutions declaring that congressional action is imperatively needed to withdraw the government from the banking business by the retirement through funding or cancellation of all its demand obligations. The board expresses the opinion that the business of banking is not a proper function of the United States Treasury, and that the private and corporate capital of the country under proper legislation would be quite sufficient for all its financial and commercial requirements. Not unnaturally, the board indorsed the so-called "Baltimore plan" of banking and currency reform, and it ordered a copy thereof and of the resolutions to be sent to the members of both houses of Congress and to the various boards of trade of the country.

Venezuela has accepted the agreement touching the arbitration of the boundary controversy formulated by Secretary Olney and Sir Julian Pauncefote. This fact was announced in a cablegram from Minister Andrade, at Caracas, to the State Department, on Monday. Simultaneously with the promulgation of this news the State Department gave to the press the text of the agreement. The main features have already been made public. The four arbitrators to be appointed on the part of the United States and Great Britain are to be selected by the judges of their respective supreme courts, instead of by the chief justices, as at first reported. The rules to govern the tribunal in its proceedings provide that adverse holding or prescription during a period of fifty years shall make a good title, and that the arbitrators may deem exclusive political control of a district as well as actual settlement thereof sufficient to constitute adverse holding or to make title by prescription. Furthermore, the arbitrators are authorized to recognize and give effect to rights and claims resting on any other ground whatever, valid according to international and on any principles of international law which the arbitrators may deem to be applicable to the case, and which are not in contravention of the foregoing rule, and in determining the boundary line, if territory of one party be found by the tribunal to have been at the date of the treaty in the occupation of the subjects or citizens of the other party, the arbitrators are to give to such occupation as reason, justice, the principles of international law and the equities of the case shall, in the opiuion of the tribunal, require.

Secretary Carlisle has not yet sent his annual report to Congress, but the more general statistics for the fiscal year are given in the President's message. It appears that during the year the receipts of the government from all sources amounted to $409,475,408.78. During the same period its expenditures were $434,678,654.48, the expenditures over receipts thus amounting to $25,203,245.70. The ordinary expenditures during the year were $4,015,852.21 less than during the preceding fiscal year. Of the receipts mentioned there was derived from customs the sum of $160,021,751.67, and from internal revenue $146,830,615.66. The receipts from customs show an increase of $7,863,134.22 over those from the same source for the fiscal year ended June 30, 1895, and the receipts from internal revenue an increase of $3,584,537.91.

A new federal crimes act is greatly needed, according to Attorney-General Harmon, who says that further defects in the criminal laws were discovered during the year, and criminal legislation is hopelessly confused. The Attorney-General points out that there is a general statute punishing embezzlement, but there are also many special statutes punishing embezzlement in particular cases, and he is not aware that it has yet been settled whether the general statute applies to such cases or not. There are statutes punishing frauds on the United States in many specific cases, and there is a general statute punishing conspiracy to defraud the United States in all cases, but there is no general statute punishing frauds against the United States when committed by one man alone. Mr. Harmon suggests that a new crimes act should be passed as speedily as possible, which should contain provisions simple, easily understood and general in their scope, covering such crimes as those above stated; that a uniform system of punishments should thus be provided, and that as to cases arising in the future the present laws relating to these crime sshould be repealed. This work, he says, could be easily and quickly performed by a commission. The Attorney-General says concerning the anti-trust law that the restricted scope of its provisions as construed by the courts makes amendments necessary.

A note of congratulation prevailed throughout the address of Carl Schurz as president of the National Civil Service Reform League at Philadelphia this week. He directed attention to the fact that the number of positions placed under civil service rules has grown within twelve years from 15,000 to 90,000. One of the most notable steps in the progress thus far made was the executive order of May 6 last by which President Cleveland added 40,000 positions to the classified list. Of the public servants under the national government who should still be put under civil service rules, Mr. Schurz said, the minor postmasters are the most important class. Of these there about 67,000. Nothing has done so much to keep the spoils idea alive in the popular mind as the change of the village postmaster with every change of party in power. Nothing will do more to disinfect the popular mind of the spoils idea than the taking of the village post office out of politics.

Among the flood of official documents which have lately appeared is a preliminary report on the income and expenditure of the railways in the United States for the fiscal year ending June 30, 1896. This report presents the chief items of an income account by territorial groups for 652 roads, representing an operated mileage of 172,369 miles of line, or about 96 per cent. of the total mileage operated in the United States. The gross earnings upon this mileage were $1,123,646,562, of which $323,468,891 were from the passenger service and $772,071,374 were from the freight service. As the operating expenses were $754,971,515, it appears that the income from operation was $368,675,047. The earnings of the passenger service were $1,877 per mile of line, being an increase of $113 as compared with the previous year. The earnings of the freight service also show an increase over last year of $349 per mile of line. The gross earnings per mile of line were $6,519 for 1896, and the operating expenses $4,380, leaving a net income per mile of line of $2,139, which is in excess of that for the fiscal years 1895 and 1894, and compares fairly well with the net income per mile of line for 1893 and 1892. The net earnings of the 172,369 miles of line represented in this income report were $368,675,047, against $341,298,047 for the corresponding roads in 1895.

An interesting opinion has just been rendered by Attorney-General Harmon, in which he says that the mere sale or shipment of arms and munitions of war by persons in the United States to persons in Cuba is not a violation of international law, however strong a suspicion there may be that they are to be used in the insurrection against the Spanish government; that individuals in the United States have a right to sell such articles and to ship them to whomsoever may choose to buy them, and that while the goods and sometimes the ship carrying them are subject to seizure by the government within whose jurisdiction they may go, if its domestic laws and regulations are violated, international law reposes no duty upon our government with respect to such transactions, and the shipment or carriage of such articles to Cuba does not become a violation of international law merely because they are not destined to a port there which is recognized by the Spanish government as open to commerce, nor because they are to be or are landed by stealth. On the other hand, if the persons supplying or carrying arms and ammunition from a place in the United States are in any wise parties to a design that force shall be employed against the authorities of Spain, and if men with hostile purposes toward the Spanish government shall also be taken on board and transported in furtherance of such purpose, the enterprise is not commercial, and is in violation of international law and the United States statutes.

NOVEMBER'S POOR RAILROAD EARNINGS.

November railroad earnings promised little that was favorable, and in this respect they can hardly be called disappointing. The returns for the month just closed are by far the poorest for any month this year—indeed since July, 1894. The unfavorable exhibit of October is fairly outdone, and in number and size of the November decreases make the month just closed a record breaker. The total earnings of 115 railroads for November aggregate $38,154,762, a decrease of 10.1 per cent. from November a year ago, which month showed a gain of 6.3 per cent. over November, 1894. The decrease of 4.3 in October from the like total in 1895 was the largest in any month since September, 1894, and the November decrease more than twice in proportion that of October.

The increases and decreases shown in each month for the past three years make the following comparison with the month of November.

	1895.	1894.	1893.
December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	1895.	1894.
January	Inc. 11.3	Dec. .5	Dec. 12.0
February	Inc. 13.7	Dec. 2.3	Dec. 12.0
March	Inc. 4.6	Inc. .6	Dec. 13.4
Three months	Inc. 9.5	Dec. .5	Dec. 12.6
April	Inc. 3.5	Inc. 4.5	Dec. 14.3
Four months	Inc. 8.1	Inc. .9	Dec. 13.4
May	Inc. 2.4	Inc. 6.5	Dec. 17.5
Five months	Inc. 7.0	Inc. 2.5	Dec. 14.2
June	Inc. 7.1	Inc. 8.0	Dec. 22.6
Six months	Inc. 7.1	Inc. 2.5	Dec. 15.4
July	Inc. 4.1	Inc. 8.5	Dec. 16.6
Seven months	Inc. 6.3	Inc. 5.2	Dec. 19.6
August	Dec. 2.4	Inc. 1.5	Inc. .9
Eight months	Inc. 5.3	Inc. 4.2	Dec. 14.9
September	Dec. .7	Inc. 4.6	Dec. 5.2
Nine months	Inc. 4.6	Inc. 4.5	Dec. 13.0
October	Dec. 4.3	Inc. 6.8	Dec. 3.1
Ten months	Inc. 3.3	Inc. 4.7	Dec. 12.2
November	Dec. 10.1	Inc. 6.3	Dec. 1.4
Eleven months	Inc. 1.9	Inc. 4.8	Dec. 10.9

The following table shows the gains or losses in November and the eleven months' period this year as compared with last, by groups of roads, compared with similar returns for the three preceding months:

	August, 1896.	*Sept.,* 1896.	*October,* 1896.	*Nov.,* 1896.	*Eleven months,* 1896.
Grangers	Inc. .5	Dec. 3.2	Dec. 6.1	Dec. 17.7	Inc. 5.0
Cent'l western	Dec. 11.7	Dec. 8.6	Dec. 11.3	Dec. 17.2	Dec. 4.1
Trunk	Dec. 4.9	Inc. 2.5	Inc. 1.8	Dec. 5.1	Inc. 1.5
Eastern	Dec. 1.7	Dec. 3.0	Dec. 2.7	Inc. .1	Dec. 2.6
Coal	Inc. 2.2	Inc. 2.5	Inc. 6.8	Dec. 7.6	Inc. 1.3
Southern	Dec. 2.2	Inc. 5.4	Dec. 3.3	Dec. 7.2	Inc. 3.9
Southwestern	Dec. .4	Inc. 7.1	Dec. 3.3	Dec. 2.1	Dec. .1
Pacific	Inc. 2.3	Dec. 11.6	Dec. 3.6	Dec. 13.8	Inc. 3.6
Totals, U. S.	Dec. 2.0	Dec. 1.4	Dec. 4.6	Dec. 11.0	Inc. 1.7
Mexican	Inc. 9.1	Inc. 12.0	Inc. 3.8	Inc. 15.0	Inc. 7.7
Totals	Dec. 2.4	Dec. .7	Dec. 4.3	Dec. 10.1	Inc. 1.9

Only one gain is reported among the groups of American roads, and that a trifling one by the one eastern road. The granger and central western groups each report more than 17 per cent. decrease, and the Pacific roads a falling off of 13.8 per cent. The best showing and the smallest decrease in any one group is that by the southwestern roads, 2 per cent. The trunk lines show a decrease of 5 per cent. and the coal and southern roads 7.6 and 7.2 per cent. respectively.

The gains made by the Mexican roads have been a feature of the month deserving attention. For November every Mexican road shows a gain, and the increase over a year ago in the whole group is 15 per cent., while for the eleven months the increase is 7.7 per cent.

Only 26 of the 108 systems covering 115 roads reported for November show gains over the November totals a year ago. The most gains and the largest volume thereof are reported by southwestern companies. Only one Pacific road shows an increase, and only two out of 34 central western roads a trifling one, as are also the gains shown in the granger group by two small roads out of 14 reported. Perhaps the best example of the scarcity of increases in November earnings is obtained from the following tables of larger increases and decreases during the month:

	Increases.
International & Great Northern	$68,613
Missouri, Kansas & Texas	130,895
Mexican Central	62,188
Mexican National	84,341
Mexican Railway	51,410
Total	$406,447
	Decreases.
New York Central	$319,428
Western New York & Pennsylvania	63,800
Burlington, Cedar Rapids & Northern	167,936
Chicago Great Western	68,460
Chicago, Milwaukee & St. Paul	678,107
Chicago, Rock Island & Pacific	198,138
Great Northern	299,567
Minneapolis, St. Paul & Sault Ste. Marie	137,020
Cincinnati, New Orleans & Texas Pacific	67,050
Louisville & Nashville	115,695
Norfolk & Western	62,378
Southern	209,843
Missouri Pacific	224,000
Texas & Pacific	50,401
Canadian Pacific	172,000
Denver & Rio Grande	91,600
Northern Pacific	523,344
Baltimore & Ohio Southwestern	75,393
Chicago & Eastern Illinois	54,000
Cleveland, Cincinnati, Chicago & St. Louis	198,778
Cleveland, Lorain & Wheeling	72,785
Duluth, South Shore & Atlantic	53,215
Lake Erie & Western	61,913
Wabash	102,711
Total	$4,127,562

The number of large increases is the smallest for many months, while the decreases outnumber any recent monthly record.

For eleven months the total earnings of 113 companies aggregate $408,675,841, a gain over a year ago of 1.9 per cent., and following an increase in 1895 over 1894 of 4.8 per cent. Earnings of the granger roads, trunk lines, coal, southern and Pacific roads are still ahead of last year, while those of the central western roads and the southwestern group are behind those of a year ago.

THE PRESIDENT'S MESSAGE.

President Gleveland's last annual message has for its topic of central interest the situation in Cuba. His statement of the actual condition of affairs seems to be strictly accurate. He says that it is difficult to perceive that any progress has thus far been made toward the pacification of the island, or that the situation of affairs as depicted in his last annual message has in the least improved. If Spain still holds Havana and the seaports and all the considerable towns, the insurgents still roam at will over at least two-thirds of the inland country, and if the determination of Spain to put down the insurrection seems but to strengthen with the lapse of time, and is evinced by her unhesitating devotion of largely increased military and naval forces to the task, there is much reason to believe that the insurgents have gained in point of numbers and character and resources, and are none the less inflexible in their resolve not to succumb without practically securing the great objects for which they took up arms. The remarks upon the character of the military operations of the Cubans betray a certain unconscious humor, as when the President says that were the Spanish armies able to meet their antagonists in the open or in pitched battle, their superiority in number, discipline and equipment could hardly fail to tell greatly to their advantage, but that they are called upon to face a foe that shuns general engagements, that can choose and does choose its own ground, and that fights only from ambuscade and when all the advantages of position and numbers are on their side.

The President points out that under the conditions incident to the prolonged struggle, growing every day more bitter, the property of the island is being destroyed and its industrial value is fast disappearing, with the prospect that if the struggle should be long continued it would be impossible to induce capital to make the attempt to restore the island to its normal productiveness. Under any circumstances, he points out, the people of the United States could not fail to be concerned about the fate of the island, but they have, in fact, a concern in it which is not of a wholly sentimental or philanthropic character. Our actual pecuniary interest in it is second only to that of the people and government of Spain. It is reasonably estimated that at least from $30,000,000 to $50,000,000 of American capital are invested in plantations and in railroad, mining and other business enterprises on the island. The volume of trade between the United States and Cuba, which in 1889 amounted to about $64,000,000, rose in 1893 to about $103,000,000, and in 1894, the year before the present insurrection broke out, amounted to nearly $96,000,000. The government is, moreover, concerned in other ways, being constantly called upon to protect American citizens, to claim damages for injuries to persons and property, now estimated at many millions of dollars, and to ask explanations and apologies for the acts of Spanish officials, whose zeal for the repression of rebellion sometimes blinds them to the immunities belonging to the unoffending citizens of a friendly power, and is compelled to actively police a long line of seacoast against unlawful expeditions, the escape of which the utmost vigilance will not always suffice to prevent.

These circumstances have led to a widespread demand for intervention on the part of the United States in the affairs of the island. The President and his advisers

have not judged it expedient that the United States should recognize the Cubans as belligerents, but they have conveyed to the Spanish government an intimation to the effect that if a satisfactory measure of home rule were tendered the Cuban insurgents, and would be accepted by them upon a guaranty of its execution, the United States would endeavor to find a way not objectionable to Spain of furnishing such guaranty. No definite response to this intimation has been received, but the government still stands ready to interpose its friendly offices in any way permitted by the constitution of the country. So much for the situation up to the present. As regards our future course of action, the President declares that, whatever circumstances may arise, our policy and our interests would constrain us to object to the acquisition of the island or an interference with its control by any other power, and, furthermore, that it cannot be reasonably assumed that the hitherto expectant attitude of the United States will be definitely maintained. While, he says, we are anxious to accord all due respect to the sovereignty of Spain, we cannot view the pending conflict in all its features, and properly apprehend our inevitably close relations to it, and its possible results, without considering that by the course of events we may be drawn into such an unusual and unprecedented condition as will fix a limit to our patient waiting for Spain to end the contest, either alone and in her own way, or with our friendly coöperation.

The only other topics of special interest falling under the head of our foreign relations touched upon in the message are the massacres in Turkey, the Venezuelan boundary arbitration, and the negotiations for a general arbitration treaty with Great Britain. While deprecating the outrages perpetrated within the Sultan's dominions, the President says that thus far none of our citizens have been killed or wounded, and that while security for the future cannot under existing conditions be guaranteed, an attempt on our part to force such a hostile presence there as might be effective for prevention or protection would not only be resisted by the Ottoman government, but would be regarded as an interruption of their plans by the great nations who assert their exclusive right to intervene in their own time and method for the security of life and property in Turkey. The latest accounts from abroad seem to indicate that these powers have taken the matter definitely in hand. The Venezuelan boundary controversy has, of course, ceased to be a subject of controversy between the United States and Great Britain, and it appears that negotiations for a treaty of general arbitration for all differences between the two countries are far advanced and promise to reach a successful consummation at an early date. The President repeats his recommendation in favor of providing at public expense official residences for our ambassadors and ministers at foreign capitals.

Touching the question of revenue legislation, the President says that we could hardly have had a more unfavorable period than the last two years for the collection of tariff revenue. He expresses the opinion that the present tariff law, if allowed a fair opportunity, will in the near future yield a revenue which, with reasonably economical expenditures, will overcome all deficiencies, and that in the meantime no deficit that has occurred or may occur need excite or disturb us, because to meet such deficit we have in the Treasury, in addition to a gold reserve of $100,000,000, a surplus of over $128,000,000 applicable to the payment of the expenses of the government, and which must, unless expended for that purpose, remain a useless hoard, or, if not extravagantly wasted, must in any event be diverted from the purpose of its exaction by the people. It is, he suggests, immeasurably better to appropriate our surplus to the payment of justifiable expenses than to allow it to become an invitation to reckless appropriations and extravagant expenditures.

Regarding the currency question, the President declares that he is more convinced than ever that we can have no assured financial peace and safety until the government currency obligations upon which gold may be demanded from the Treasury are withdrawn from circulation and canceled. This, he says, might be done, as has been heretofore recommended, by their exchange for long-term bonds bearing a low rate of interest, or by their redemption with the proceeds of such bonds. Even if only the United States notes known as greenbacks were thus retired, it is probable that the Treasury notes issued in payment of silver purchases under the act of July 14, 1890, now paid in gold when demanded, would not create much disturbance, as they might, from time to time, when received in the Treasury by redemption in gold or otherwise, be gradually and prudently replaced by silver coin. This plan of issuing bonds for the purpose of redemption appears to the President to be the most effective and direct path to the needed reform. In default of this, however, it would, he urges, be a step in the right direction if currency obligations redeemable in gold, whenever so redeemed, should be canceled instead of being reissued. This operation would be a slow remedy, but it would improve present conditions. National banks, he continues, should redeem their own notes, and should be allowed to issue circulation to the par value of the bonds deposited as security for its redemption, and the tax on their circulation should be reduced to one-fourth of 1 per cent. In considering projects for the retirement of United States notes and Treasury notes issued under the law of 1890, Mr. Cleveland is of the opinion that we have placed too much stress upon the danger of contracting the currency, and have calculated too little upon the gold that would be added to our circulation if invited to us by better and safer financial methods. It is not, he says, so much a contraction of our currency that should be avoided as its unequal distribution, and this might be obviated, and any fear of harmful contraction at the same time removed, by allowing the organization of smaller banks and in less populous communities than are now permitted, and also authorizing existing banks to establish branches in small communities under proper restrictions.

The President has some remarks upon trusts, whose tendency he declares to be to crush out individual independence and to hinder or prevent the free use of human faculties and the full development of human character. He directs attention to the fact that though Congress has attempted to deal with this matter by legislation, the laws passed for that purpose thus far have proved ineffective, not because of any lack of disposition or attempt to enforce them, but simply because the laws themselves as interpreted by the courts do not reach the difficulty. If the insufficiencies of existing laws can be remedied by further legislation, he urges, it should be done. The fact must be recognized, however, that all federal legislation on this subject may fall short of its purpose because of inherent obstacles, and also because of the complex character of our governmental system, which, while making the federal authority supreme within its sphere, has carefully limited that sphere by metes and bounds which cannot be transgressed. The decision of our highest court on this precise question, he adds, renders it quite doubtful whether the evils of trusts and monopolies can be adequately treated through federal action, unless they seek directly and purposely to include in their objects transportation or intercourse between states or between the United States and foreign countries. It does not follow, however, he says, that this is the limit of the remedy that may be applied, and that even though it may be found that federal authority is not broad enough to fully reach the case, there can be no doubt of the power of the several states to act effectively in the premises, and there should be no reason to doubt their willingness to judiciously exercise such power.

The remaining portions of the message are taken up with summaries of the reports of the departmental chiefs, and occasional specific indorsements of their suggestions, to which in some cases reference has already been made, while of others notice may be more conveniently taken elsewhere.

EXCHANGE AND BORROWING OPERATIONS.

The purchasing of long bills of exchange in the New York market and the borrowing of money thereon, as explained in the last issue of this paper, constitutes a very important factor in the position, immediate and future, of the money markets, both here and in London. Though it has been upon a smaller scale during the current week, the process, nevertheless, is still in progress. The declining tendency of the London money market for a time was naturally responsible for the apparent diminution of these transactions. The plethora of loanable funds at New York continues. Last week's bank statement displayed an increase of $4,000,000 more in the legal-tender holdings of the banks, bringing up the total net gain in cash, gold and legal tenders by the local institutions since the election to nearly $35,000,000, while there has been no borrowing demand, either from speculative or mercantile sources, sufficient to give adequate employment to the vast amount representing the unused balances of the entire country. In consequence, if interest rates here have changed at all during the past week, it has been in the direction of increased ease. Time money is still quoted at 3 per cent., or a little higher in proportion to the length which obligations run, and call money has been 1½@2 per cent., making loans on call against bills of exchange at 2 per cent. entirely feasible. It must be noted, however, that the London market has displayed during the week, particularly in the earlier portion of it, a slightly easier tone. Discount rates, which were up to 3½ per cent. a week ago, declined, and at one time were quoted at under 3 per cent. Within the last two days, however, a somewhat firmer feeling has appeared at London, due, partly, to the rise in money rates at Berlin, which has tended to create a drain in that direction, and still more so to the renewed hardening of money in India, where the Bank of Bombay has marked up its discount rate to 9 per cent. India exchange is correspondingly higher, and there has been a renewed feeling at London that the exigencies of the situation in India may result in demands for assistance, which London and the Bank of England will have to supply. Prior, however, to this renewed hardening of money in London, following upon the above developments in connection with India, the margin of profit in the purchase of long sterling here, to be held till maturity, decreased with the tendency of the two money markets to come together. It is even understood that in some cases the bills held in loans of this character, made just after the election, and which, consequently, had already run for thirty days, were thrown upon the market, and that to this circumstance the weakness of exchange here on Tuesday and Wednesday, when the rate for demand sterling sold down to 4.86¼, is attributable. This, of course, created a disinclination on the part of operators to act with any freedom. The symptoms of increased strength of the money market at Berlin and the demonstrations in India already referred to seemed, however, to have not only strengthened the exchange market here, but to have resulted in an appreciable increase in the demand for bills of the speculative or semi-speculative character discussed in this connection, and to be responsible for the renewed firmness of the local exchange market.

COMPTROLLER ECKELS' REPORT.

Comptroller Eckels' report on the national banks covers not the fiscal year ending June 30, but the twelve months ending October 31. During the last year ending with that date 28 new banks were organized, with a capital stock aggregating $3,245,000. These banks were located in fifteen states and the District of Columbia. Of the number eight were in Pennsylvania. The capital stock of twelve located in the eastern states aggregates $1,180,000. The total number of national banks organized since June 30, 1863, the date of the granting of the first certificate of authority, was 5,051, making an average of 153 for each year. Of this number 3,679 were in active operation on October 31, 1896, with an authorized capital stock aggregating $650,014,895, represented by 288,902 shareholders, or an average capital stock of $176,682, of shares of stock 2,296, and of shareholders 78.

The total amount of circulating notes outstanding on October 31, 1896, was $234,553,807, of which amount $7,091,205 was secured by bonds still held for account of insolvent and liquidating banks, and $18,747,430 by lawful money deposited for account of the same, and by active banks reducing circulation. The net increase in circulation secured by bonds during the year was $26,329,053, and the gross increase in the total circulation was $21,099,429. The total resources of the 3,676 banks reporting on October 6, 1896, the date of the last report of condition, was $3,263,685,313.83, of which $1,893,268,839.31 represented loans and discounts and $362,165,733.85 money of all kinds in bank. Of their liabilities $1,597,891,058.73 represented individual deposits, $336,342,843.70 surplus and net undivided profits, and $209,944,019.50 outstanding circulating notes secured by bonds.

The banks going into voluntary liquidation during the year numbered 37, having a capital stock of $3,745,000 and circula-

tion amounting to $1,262,815. Receivers were appointed during the year for 27 banks, the aggregate capital stock of which was $3,805,000 and their circulation $761,500. A comparison of the data prescribed for last year with that for the year 1895 shows a decrease of 36 in the number of active banks and of $4,305,000 in capital stock. The number of banks organized is 15 less, and the number of banks going into voluntary liquidation 14 less. There has been a decrease of nine in the number of receivers appointed, and 45 in the number of extensions of corporate existence. The number of expirations of charters decreased three, and the number of new banks organized to succeed expiring associations remains unchanged.

In the appendix to the report a table is presented showing the semi-annual dividends and the net earnings of banks in excess of such dividends, by states, reserve cities and geographical divisions, for the current and prior years, and also a table showing the number of banks, capital, surplus, dividends, net earnings and ratio of dividends to capital for each year for twenty-seven years, with averages. The average rate of dividend paid for the current year was 6.9, the per cent. of dividends based on capital and surplus 5, and the per cent. of net earnings on capital and surplus 5.4. An interesting analysis is presented of returns received from banks as to the extent to which the use of instruments of credit enters into the settlement of wholesale and retail transactions in daily life. The conclusion drawn from these returns is that 67.4 per cent. of the retail trade of the country is transacted by means of credit paper; that 95.3 per cent. of the wholesale trade is so carried on; 95.1 per cent. of business other than mercantile, and 92.5 per cent. of all business. The Comptroller suggests the following amendments to the national banking laws, viz.:

First, That the loans and discounts of banks to their executive officers and employees be restricted in amount and secured by proper collateral.

Second, That no loan be made to a director not an executive officer of the bank, except upon collateral security or a satisfactorily indorsed note.

Third, That directors be required to make an examination of their bank once each year, upon a day to be designated by the Comptroller.

Fourth, That assistant cashiers under certain conditions be authorized to sign circulating notes and reports of condition.

Fifth, That provision be made for administering general oaths taken under the national bank act.

Sixth, That in places having a population of less than 2,000 inhabitants national banks shall be permitted, under regulations to be made by the Comptroller of the Currency and approved by the Secretary of the Treasury, to be organized with a capital stock of not less than $25,000, and with a corresponding reduction in the amount of bonds required to be deposited with the Treasurer of the United States.

Seventh, That national banks be permitted, under such regulations and restrictions as shall be made by the Comptroller of the Currency and approved by the Secretary of the Treasury, to establish branch banks in towns and villages where no national bank is established and where the population does not exceed 1,000 inhabitants; such branch banks to have the right to receive deposits, make loans and discounts, and buy and sell exchange, but in no case to be permitted to issue circulating notes other than of the parent bank. It shall in all respects be considered as a part of the parent bank, and in each case where such branches are maintained the Comptroller shall receive in the reports of the central bank a statement, properly sworn to and attested, of the condition of its branches. He shall also have the right of separate and independent examinations, and he may, whenever he deems it necessary, require, before granting the right to any bank to maintain branches, that the paid-up capital stock of such bank be increased to an amount to be by him fixed, with the approval of the Secretary of the Treasury.

Eighth, That the semi-annual tax on circulation be reduced to one-fourth of one per cent.

Ninth, That the issue of circulating notes to the par value of the bonds deposited be permitted.

In concluding his report Comptroller Eckels points out that in other countries efforts have been directed towards divorcing the treasury departments of governments from the bank-note function, which is given to corporations created for the purpose. A similar line of policy, he suggests, should be followed in the United States. The current credit instruments entering into the movements of finance, trade and commerce ought all to be issued by the banks as needed, under government supervision, in order to insure uniformity and to guard against loss. The responsibility for their redemption in gold coin should be wholly borne by the banks, and upon the banks should rest the duty of furnishing whatever gold is needed for domestic or foreign business purposes. In order to attain this end the credit currency of the government now outstanding should be redeemed in gold and retired, through funding or otherwise, as speedily as safety will permit, and the banks made to assume the rights and burdens which properly belong to them. The sound state and private banks prior to 1863, he says, redeemed their own notes in gold and furnished all gold needed for domestic trade and to settle international balances. The national and other banks, from the resumption of specie payments until 1890, when the government's credit currency was again enlarged and legislated upon, followed the same practice. The question is not one of ability on their part to meet such demand, but one of opportunity, freed from government competition and unrestricted by unrequired government control. Mr. Eckels submits that legislation by Congress, based upon safe and prudent lines, having in view the gradual payment and cancellation of the credit currency now maintained by the government and the issuance hereafter of all of such currency through the banks, with full responsibility therefor placed upon them, should be had at the very earliest practical moment; that the results which would follow such enactments would be beneficial, and that monopoly would not be created nor favor shown thereby.

OUTLOOK FOR WHEAT PRICES.

There appears to be a lull in the speculative wheat markets, which, taken in connection with the decline in the price abroad, a lack of demand for export compared with preceding weeks, as well as a falling off in demand from mills and the fact that Russia is offering wheat more freely for export, and that the continent of Europe appears more anxious to buy Indian corn than wheat—seems to indicate that the bulls in wheat have largely disposed of their holdings and are willing that a reaction should follow, that they may take a fresh start.

As predicted, the price of spot wheat has touched and passed the dollar mark, and it is only fair to add that the strength of the statistical position of the cereal is such that "dollar wheat" is far from being an unduly high price. No more important information bearing on the strength of the statistical position of wheat has been made public than that reported in BRADSTREET'S last week, showing a net falling off in available stocks during November of 618,000 bushels on both coasts of the United States, whereas the usual November crop movement in this country results in a net increase of 10,000,000 bushels and more. Records of the movement of wheat, compiled exclusively by this journal, make it plain that while net gains weekly in available supplies did not appear this year until the end of August, which was quite as late as a year ago, they began at the close of July in 1894. Weekly gains were followed by decreases in the middle of November this year, in contrast with regular and continuous increases in stocks of available wheat in like weeks in preceding years. One has to go back fourteen years, to 1882, to find a weekly decrease of 1,200,000 bushels in the available supply of wheat in the United States as early as the middle of November.

Those who think the statistical position of wheat at home and abroad is not a very strong one have relied for their argument on the enormous shipments of wheat to Europe since the first of August, apparently overlooking the extremely reduced stocks of wheat afloat for and in Europe on the date last named as compared with like dates in preceding years. An unexpected decrease in English stocks of wheat last week, reported exclusively by BRADSTREET'S, has furnished several daily paper market reporters with "copy" ever since. While it is possible that extremists in the United States have placed the probable crop of wheat harvested this year at too low a figure, there is reason for believing that the world's export surpluses, when placed in contrast with requirements by wheat importing countries for the seven months ending June 30 next, will find little to encourage bear sales of the cereal.

The fact that large exports from America, Russia, Roumania and Bulgaria have taken place during the past four months under the influence of the higher range of prices does not necessarily indicate any change in the question of supply and demand as applied to the whole season. One result is to make plainer what each country can spare for export and what each importing country approximately requires, for if exporting countries, under the influence of attractive prices, have shipped more freely than usual it has been done at the expense of subsequent exports. Thus, the United States has been shipping to Europe at the rate of over 168,000,000 bushels per annum, an impossible rate for the whole season; so, also, in respect to Russia, Roumania and Bulgaria, which since August 1 have exported at the unprecedented rate of 232,000,000 bushels per annum—a rate which it is obvious cannot be maintained.

The opinion is now held, notably, among others, by Beerbohm, "that the export movement so far this season is overdone; that is to say, it does not represent the exporting power of the exporting countries, but is rather the result of the more attractive level of values." While European requirements are not larger than they were supposed to be earlier in the season, with India and Australia importing the quantity available for Europe will be less than was expected at the commencement of the season, so that the statistical position is thereby strengthened.

TOTAL EXPORTS OF WHEAT (FLOUR INCLUDED) TO EUROPE FROM AUGUST 1 TO NOVEMBER, 24, 1896.

	1896.	1895.	1894.
From United States and Canada	52,520,000	34,040,000	46,000,000
From Russia	38,032,000	38,456,000	41,120,000
From Roumania and Bulgaria	33,480,000	26,120,000	10,320,000
From India	712,000	5,648,000	3,640,000
From Argentine	1,168,000	728,000	9,040,000
From Australia	....	80,000	1,360,000
From other countries	5,360,000	5,560,000	5,080,000
Total bushels	131,272,000	110,632,000	116,560,000

The foregoing shows that in the sixteen weeks following August 1, 1896, the United States and Canada exported 18,000,000 bushels more to Europe than in a like period in 1895, and 6,000,000 bushels more than in 1894. Russia, on the other hand, exported about the same quantity this year as one year ago, but 3,000,000 bushels less than in the sixteen weeks of 1894. Roumania and Bulgaria, however, sent 7,000,000 bushels more across their borders this year to European countries than in the like portion of 1895, and 23,000,000 bushels more than in 1894. India's decreased European wheat shipments this year compared with last were nearly 5,000,000 bushels, and as compared with the sixteen weeks in 1894 nearly 3,000,000 bushels. A like showing with respect to Argentine Republic points to an increase of 400,000 bushels as contrasted with last year, but a decrease of 7,800,000 bushels compared with 1894. European shipments from Australia were *nil* in the sixteen weeks of this year referred to, 80,000 bushels last year and 1,360,000 bushels in the year before, while other wheat-exporting countries have not varied materially in the aggregate exports to Europe in the periods named. In all, there appear to have been exported to Europe about 21,000,000 more bushels of wheat this year during the sixteen weeks referred to than in 1895 and 14,000,000 bushels more than in 1894.

The crucial test of the statistical position of wheat, of course, must depend on the relation of the needs of importing countries between August 1, 1896, and July 31, 1897, to the probable available export surpluses held elsewhere. One of the most conservative authorities on this subject is Beerbohm, who estimates these totals as follows:

SURPLUS WHEAT AVAILABLE FOR EXPORT TO EUROPE AUGUST 1, 1896, TO JULY 31, 1897.

	Bushels.
United States and Canada	108,000,000
Russia	120,000,000
Roumania, Bulgaria, Turkey, etc.	64,000,000
India and Persia	2,000,000
Chili and Uruguay	4,000,000
Argentina	20,000,000
Australasia	....
Other countries	12,000,000
Total bushels	330,000,000

ESTIMATED REQUIREMENTS OF WHEAT-IMPORTING COUNTRIES, AUGUST 1, 1896, TO JULY 31, 1897 (BEERBOHM).

	Bushels.
United Kingdom	184,000,000
France	12,000,000
Germany, Belgium and Holland	100,000,000
Italy	18,000,000
Spain and Portugal	14,000,000
Switzerland, Greece and Scandinavia	26,000,000
Other countries	6,000,000
Total bushels	360,000,000

This shows a balance of only 30,000,000 bushels, but the balance appears upon the wrong side. The London authority allows an American surplus for Europe of only 100,000,000 bushels, which, unless extreme bull estimates of the crop are found to be true, is likely to prove small, and may go far toward equalizing the total estimated export surpluses and requirements. Russia's probable export seems high at 120,000,000 bushels, as the crop there is undoubtedly smaller than last year. The requirements of France, however, have been estimated conservatively at only 12,000,000 bushels, particularly in view of the prospect for a poor crop there. If by stretching a point on the part of the United States and minimizing European requirements one is enabled to nominally make both ends meet, it still remains true that no one of the larger exporting countries is likely to draw heavily on its reserve stocks for export except under the stimulus of a marked advance in quotations.

Here, then, lies the strength in the

position of wheat, entirely apart from the question of the famine in India. As pointed out, Europe wants this season 360,-000,000 bushels of wheat, of which 132,000,-000 bushels had been shipped by November 24, leaving 228,000,000 bushels still to be obtained. With Australia and India in the importing rather than the exporting column, it would seem as if Europe would be obliged to secure its supplies to the end of this cereal year about as follows: Russia, 80,-000,000 bushels; Roumania, Bulgaria and Turkey, 32,000,000 bushels; Argentina, Chili and Uruguay, 20,000,000 bushels, and other countries 80,000,000 bushels, a total of 140,000,000 bushels, leaving, on the face of it, about 88,000,000 bushels to be supplied by America from the crop of the current year and from reserve stocks. In any event, European authorities count at least on receiving 72,000,000 bushels of wheat from the United States between December 1 and the end of July next, and if current estimates of the size of the crop in this country are adhered to and best estimates of the quantity of wheat carried over on July 1 last cannot be enlarged, the prospect between the present and the end of the cereal year is for a firmness in wheat prices which has not yet been experienced on this crop. Our English contemporary admits that "America has seldom held a stronger position as a price-maker than she does to-day. She has already exported 52,000,000 bushels to Europe out of a maximum surplus of 100,000,000 bushels (?), whilst Europe wants at least 72,-000,000 bushels more from her." It may well be added that under these circumstances the later part of the season 1896–97 "is likely to furnish even more legitimate grounds for active and buoyant markets than the first part."

CIRCULATION STILL INCREASING.

The money in circulation showed a net increase of $19,389,132 for the month. The decreases comprised $3,811,863 in Treasury notes, $1,465,001 in silver certificates, and $180,560 in gold certificates. The increases comprised $17,755,157 in United States notes, $6,005,000 in currency certificates, $332,843 in national bank notes, $388,903 in gold coin, $303,-043 in standard silver dollars, and $61,610 in subsidiary silver. The official statement exhibiting the changes in money and bullion in the Treasury showed a net decrease of $588,714 for the month. The decreases included $17,755,157 in United States notes, corresponding with the increase in circulation noted above, $62,646 in subsidiary silver, and $926,603 in silver bullion. The increases comprised $9,850,-770 in gold coin, $1,610,957 in standard silver dollars, $2,259,863 in Treasury notes of 1890, $81,603 in national bank notes, and $4,352,499 in gold bullion.

In the following table the general stock of money coined or issued, the amount in the Treasury, and the amount in circulation on December 1, are shown in detail:

	General stock, coined or issued.	*In Treasury.*	*Amount in circulation Dec. 1, 1896.*
Gold coin	$634,287,157	$117,557,275	$516,729,882
Standard silver dollars	441,466,141	382,972,296	58,493,845
Subsidiary silver	75,803,546	14,570,200	61,233,346
Gold certificates	39,433,139	1,416,390	38,016,749
Silver certificates	367,903,504	11,591,383	356,312,121
Treas'y notes, act July 14, 1890	121,677,280	41,529,379	80,147,901
United States notes	346,681,016	71,975,533	274,705,483
Currency certificates, act June 8, 1872	38,510,000	40,000	38,470,000
National bank notes	235,398,890	13,063,471	222,335,419
Totals	$2,301,160,673	$654,715,927	$1,646,444,746

As compared with the corresponding date last year there are shown decreases of over $25,100,000 in Treasury notes of 1890, of over $12,200,000 in gold certificates, of over $7,400,000 in currency certificates, of nearly $4,200,000 in subsidiary silver, and of over $260,000 in standard silver dollars. There were increases of nearly $36,500,000 in gold coin, of over $20,400,000 in silver certificates, of nearly $39,800,000 in United States notes, and of over $14,700,000 in national bank notes.

For the twelve months since December 1 last year there was an increase in the total volume in money in circulation of over $52,200,000. The circulation per capita, estimated on the basis of a population of 72,030,000, was put by the Treasury experts at $22.86. This represents an increase of 23 cents for the month, and of 25 cents as compared with the corresponding date last year.

THE INTERIOR DEPARTMENT REPORT.

In his annual report Secretary of the Interior Francis suggests that our waste acreage should be taken up by actual settlers who should be given every encouragement, and says that if the rate of settlement continues in the future as in the past, but very little vacant land will be left in ten years' time. It appears that the actual public domain is now 1,849,072,587 acres. The public lands still vacant amount to over 600,000,000 acres, not including Alaska. About 85,729,751 acres have been patented to railroads, and there are yet due railroads and wagon roads under their grants an aggregate of 114,736,639 acres. The total acreage segregated from the public domain was 946,219,160 acres. The Secretary directs the attention of Congress to the necessity of legislation looking to the reclaiming of arid lands, and says that of the 500,000,-000 acres of arid lands 100,000,000 acres might be reclaimed by the conservative use of water, but that it is impossible, under the laws now in operation, to control the reclamation of the arid regions so as to prevent the improvident use of water over which the general government has no control. This should be done, he thinks, by a system which contemplates the reclamation of the entire territories from a common source of supply, and the utilization of that supply, or by the adoption of the suggestion of the Commissioner of the General Land Office, which is to place the lands in the direct control of the states for reclamation. Legislation for the preservation of the forests is urged, and reference is made to the forthcoming report of the Forestry Commission which may furnish a basis for such legislation.

Regarding pensions, the Secretary says about 970,678 persons are drawing about $140,000,000 per annum in pensions, and that this branch of the service should be conducted with great care and discretion. He gives a table which shows that the total amount paid out by the government in pensions and the cost of disbursing the same during the last thirty-one years was $2,034,817,-769, which lacks only $346,712,525 of being equal to the high-water mark of the interest-bearing public debt. One hundred and forty million dollars is thought to be sufficient for the payment of pensions during the next fiscal year, unless pensions are increased by further legislation. The Secretary recommends that an increase of from $8 to $12 per month be granted to all survivors of the Mexican war who are wholly disabled and destitute.

In relation to the bond-aided railroads, the Secretary calls attention to the fact that the Central Pacific Railroad is in default to the government, or unquestionably will be on January 1 next, when $2,432,000 additional of its indebtedness, together with thirty years' interest thereon, will fall due and must be redeemed by the government. On January 1, 1897, $64,640,000 additional bonds of the Union Pacific will mature; interest on same—$11,952,000—will be then due, and if not paid the Union Pacific will unquestionably be in default. He has therefore declined to patent lands to the Union Pacific Railroad or Central Pacific Railroad, except in cases where it can be shown that the lands for which patents are asked have been sold to bona fide purchasers. The Central Pacific Railroad was, on June 30, 1896, in default to the government to the extent of $288,143.66 on its "bond and interest" and its "sinking fund" account. The Secretary does not support the recommendation of Commissioner of Railroads Hampton to appoint a commission to settle the claims of the government on the Pacific railroads. He suggests that if the debts are left to be settled by means of a commission the matter will probably drag along interminably; that anyway Congress would not allow any commission to settle the matter without reporting to Congress, and that, therefore, there would be practically nothing gained by acting on Mr. Hampton's recommendation.

The condition of the Nicaragua Canal enterprise is referred to in the report. The Secretary directs attention to the fact that the act chartering the Nicaraguan Canal Company requires the company to make a report on the first Monday in December in each year to the Secretary of the Interior, to be verified on oath by its president and secretary. A preliminary statement has been submitted by the canal company showing that no work has been done on the canal since August, 1893. The Maritime Canal Company has entered into a contract with the Nicaragua Canal Construction Company for the construction of the canal, but the latter company became financially embarrassed in August, 1893, and subsequently made an assignment of its construction contract and all its assets to the Nicaragua Company, a corporation chartered by the state of Vermont. The latter company "has not yet found itself in a position to resume the work of construction under its contract."

LITTLE'S BALTIMORE & OHIO REPORT.

Soon after the Baltimore & Ohio property passed under the protection of the courts Mr. Stephen Little, of this city, the noted expert in railroad accounting, was employed by the committee representing the stockholders to make an investigation of the company's financial affairs. The report, it is well known, was completed early in the past summer. It was, however, withheld for reasons now stated to be connected with the financial depression which existed down to the time of the presidential election, and the consequent liability to extreme disturbance in the value of the company's securities which would doubtless have followed the immediate publication of a document so severely critical in its treatment of the past management and present financial status of the unfortunate corporation. Rumors of a more or less definite character had, however, been in circulation, almost from the day the Baltimore & Ohio receivers were appointed, that the management displaced from power last December had left its affairs in a bad state, and the very fact that Mr. Little was subsequently engaged to probe the matter reënforced the idea that irregularities in finance and accounting had occurred. Some of them, it will be remembered, took an exaggerated form. It was even stated that several millions of dollars had disappeared, and though this was denied, the fact that Mr. Little's labors and conclusions were not submitted to the security-holders and public gave occasion for more or less disadvantageous surmises as to their tenor.

The report was, however, read at the recent meeting of the company's stockholders in Baltimore, and has now been given to the parties in interest in printed form. In one sense the delay has brought it within the realm of ancient history, and therefore deprived it of some of its force. Nor does it contain such startling revelations of manipulation of accounts, and so forth, as those which distinguished Little's famous report upon the Atchison property. In spite of this, and also of the evident policy of the investigator to state matters, in this instance, in a thoroughly conservative manner, the facts and conclusions set forth leave no doubt that the old management of the Baltimore & Ohio Company indulged in a jugglery with the accounts which, even if unintentional, was highly reprehensible. The period covered by the report extended from September 30, 1888, to November 30, 1895, or the time during which the company was in the hands of the former management, and the first startling circumstance elicited is that in that time, while only $971,000 was actually earned that could be considered applicable to the payment of dividends, no less than $6,269,-000 was actually divided among the stockholders, while in the same period there was an understatement of liabilities by $5,481,-000, and a steady growth of floating debt till it rose to $16,312,000. The causes which forced the property into bankruptcy and a receivership are enumerated by the expert under six several heads, embracing the inflation of its net income, the mischarge of worn-out equipment to profit and loss instead of to income, the capitalization of charges to income under the head of construction, the capitalization of improvements to leasehold roads, the payment of unearned dividends, and the understatement of liabilities. Under each head specific items are furnished, in some cases in the form of lengthy exhibits and summing up of totals. Mr. Little gives an aggregate of $11,204,000 of such deceptions. One of the most damaging allegations concerns the overstatement of the net earnings. At the outset of the examination, Mr. Little says, the present management informed him that they had already discovered an overstatement of net of more than $2,500.000 for three years and nine months ended June 30, 1895. This is examined in detail, and it is shown was contrived by such schemes as writing up the book value of stocks owned, and charging to income the interest on advances to subsidiary lines, and various book accounts properly credited to "profit and loss." The manner of treating worn-out equipment is equally reprehensible and inexcusable, because of the fact that this very process was employed by the old Garrett family management of the road and resulted in the fictitious surplus that had to be reduced in 1888. In regard to improper charges to capital or construction Mr. Little observes: "Call these improvements by

whatever name we may, extraordinary or otherwise, their character is such that I can see no propriety in capitalizing them. The primary object of all increase in capitalization is, or should be, to obtain increased revenues commensurate therewith. * * * For a road as old as that of the Baltimore & Ohio Company, there should be some well-defined limits to its construction account if it is to be kept open indefinitely." He furthermore adds that while from November, 1875, to September, 1888, the liabilities increased $22,000,000 or more, the net earnings from all sources actually decreased $461,000.

The conclusions at which this noted expert arrives in regard to the property are not, however, altogether unfavorable. The real net earning power is not to be disregarded. Taking the year 1895 as an index, there was after paying all charges and dividends on the preferred stocks a deficit of $294,000, and, with the preferred dividends eliminated, a surplus of $5,956. From this he proceeds to say that if adequate capital can be obtained with which to fund its floating debt and furnish facilities for the enlargement of its business and the economical handling of the same, there is nothing discouraging in the prospect of the ability of the company to earn the interest, and more, on all its direct obligations now outstanding.

It is understood that these latter ideas are in line with the policy to be pursued by the reorganizers, and it is furthermore stated that for the present time necessary improvements will be provided for by the issue of receivers' certificates, in the hope that a demonstration of the property's true earning capacity will facilitate the funding of the floating debt and render the readjustment of the company's affairs without foreclosure a possibility. It is indeed stated that certain interests in the property are inclined to probe the matters investigated by Mr. Little still further, though any practical results from such a course must be regarded as doubtful.

POSTAL DEPARTMENT WORK AND RATES.

An excess of expenditures over receipts amounting to $8,127,088 is shown in the annual report of Postmaster-General Wilson. This deficiency, however, is less than that for the preceding fiscal year by $1,679,956. The deficit shown, it need scarcely be said, is in no way owing to defects in the administration of the department, and furthermore, as the Postmaster-General points out, there is no reason for its existence. The department is powerless to prevent it, but it is within the power of Congress to wipe it out and substitute in its place a steady surplus. The deficit has its chief source in the transmission at second-class rates of a large and rapidly-increasing volume of matter never in the contemplation of the law, which gives the nominal rate of 1c. a pound on such matter, and assuredly outside of the policy of the law as to newspapers and periodicals.

It is worth while to notice the way in which the law as to second-class matter operates at present. It appears that the increase in the weight of second-class matter for the year was 37,000,000 pounds, as against 13,000,000 pounds last year. The mere cost of transportation of this matter is estimated at 8 cents per pound. The postage revenue received from it was 8½ mills a pound. Thus 349,000,000 pounds in round numbers, at 8 cents for transportation, cost $27,920,000; postal revenues received, at 8½ mills per pound, $2,966,403—a loss in transportation alone of nearly $25,000,000. From another point of view the absurdity of the existing system can be made apparent. The second-class matter comprised more than two-thirds of all the non-governmental matter—512,997,323 pounds—handled during the fiscal year, yet it yielded less than one-thirtieth of the cost of the mail service. The recommendation of the Postmaster-General for a reform of this abuse is strongly indorsed in his message by the President. Returns of the average revenue from the different classes of mail matter put the matter in a striking light, for they show that while the average revenue from each pound of first-class matter was 93 cents, that from each pound of third-class matter 13.1 cents, and that from each pound of fourth-class matter 15.6 cents, the revenue from each pound of second-class matter was only 8½ mills.

The Postmaster-General devotes some space to a discussion of the proposed one-cent letter rate, and says it would yield a great profit, but that it is idle to talk of such reduction while two-thirds of our mail matter is handled at a small fraction of its cost, and the deficits of the department in consequence aggregated in eleven years, since the act of March 3, 1885 (1 cent a pound rate), the enormous sum of $71,377,480. The results of the rural free delivery system are declared to be yet incomplete. Mr. Wilson suggests, with a view to a better utilization of the carrier service, giving the force a semi-military organization. He also advocates securing fixity of tenure during efficiency and good behavior to the three Assistant Postmaster-Generals, whose work is entirely non-political, whose capacity to deal with the large machinery and great expenditures of their respective bureaus must come in a great measure from experience, and who preserve the continuity of the department not in mere desk or division work, but in general administration, and further recommends the inclusion under the civil service rules of as many as possible of the postmasters themselves, the reclassification of the clerks of the railway mail service, and of clerks at first and second-class post offices, making provision for ten additional post office inspectors, and legislation making postmasters and their sureties liable for the acts and defalcations of their subordinates, and authorizing postmasters to bond their subordinates.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

* Corrected totals. † Last week's totals.

At present there are forty-two naval vessels in commission, with a tonnage of 137,859 tons. Of these two have been added since the date of Secretary Herbert's report. At the close of the fiscal year there were forty vessels in commission, with a tonnage of 122,528 tons. At the same date there were serving in the navy 8,165 men and 1,378 apprentices. The naval militia comprise 3,339 men in the states of California, New York, Massachusetts, North Carolina, Rhode Island, Maryland, South Carolina, Pennsylvania, Illinois, Connecticut, Michigan, New Jersey, Georgia and Louisiana. The number of men has nearly doubled in four years. The opinion is expressed that in the highly intelligent personnel of the naval militia many will present themselves who, with their acquired knowledge and training, can be more quickly qualified for junior officers and gunners than those coming from any other existing class auxiliary to the navy proper. The opinion of the officers of the navy who have been officially connected with them has, as appears from the reports made to the department, grown to be almost unanimous that the naval militia as at present organized will form a powerful adjunct to the local defense of the coast, thus relieving the regular navy of duties which would greatly lessen its power by dividing its force, all of which would be needed elsewhere.

In order to more thoroughly instruct the naval militia in the duties which will be required of them in case of mobilization or of war, it is the intention of the department to communicate to them as soon as practicable that portion of the plan of general mobilization and defense which relates to the several states to which they belong, what vessels are to be used, what positions not embraced in the military defenses must be mined and protected by batteries, what signal stations must be maintained, and, in general, everything that must be done to utilize all possible resources for the local defense. This will be the work of years, but it is believed that by intelligent coöperation between the officers of the department and the naval militia a thoroughly digested plan of mobilization and subsequent operations may be gradually perfected which will be of inestimable value to the country. With this plan in view, the department has granted authority for officers of the naval militia to attend the courses at the Naval War College and Torpedo School at Newport, R. I., and during the past summer six naval militia officers have followed a portion of the course at the former and nineteen have taken the prescribed course at the latter school. In this way an acquaintance with the methods found best for the defense of localities and with the practical operation of torpedoes will be disseminated among their organizations. Attention is again called by the Secretary to the necessity for some legislation by Congress which will enable the department to make use, in case of an emergency, of the tugs, yachts and vessels engaged in the fishing fleets and coastwise and lake trade, and to call into the service of the navy the sailors and officers necessary to command and fit such ships in case of threatened or actual war. He recommends an additional appropriation for the purpose of supplying guns and ammunition with which to arm vessels to be called into service from our merchant marine.

Secretary Carlisle did not send his report to Congress this week, but did send his estimates of appropriations required for the public service of the fiscal year ending June 30, 1898, as furnished by the several executive departments. The estimates foot up $421,718,970.60, as against $418,091,073.17 estimated for 1896–97, and $432,431,605.98 appropriated for that year. The estimates for 1898 by title are:

Legislative establishment	$4,379,820.80
Executive establishments	19,865,952.00
Judicial establishment	907,120.00
Foreign intercourse	2,082,728 76
Military establishment	24,292,636.48
Naval establishment	32,434,773.62
Indian affairs	7,279,525.87
Pensions	141,328,580.00
Public works	31,447,061.92
Postal service	1,288,334.47
Miscellaneous	36,344,216.68
Permanent annual appropriations	120,078,220.00
Grand total	$421,718,970.60

The tables submitted with the estimates are noticeable for the scarcity of estimates for the construction of public buildings, except in the Marine Hospital Service and for river and harbor improvements. The estimates for the latter make a total of $5,349,000.

CURRENT BUSINESS NEWS.

Industrial.

The Peuer Mine, located at Peuer, Wis., has shutdown completely. No cause is assigned for the shut down. This mine is part of the Rockefeller property.

Fires have been started under the tanks of the Cohassey Glass Company, at Bridgeton, N. J., and the blowers will begin work on the 26th inst. Four hundred men will be given employment.

A Kansas City dispatch says that the Omaha, St. Joseph and Kansas City packers have determined to form a company and purchase salt mines in Kansas, and hereafter produce all the rock salt that may be needed in the packing business of the three cities.

The Ætna rolling mill, at Cleveland, Ohio, has resumed operations, employing 350 men.

A meeting of representatives of the largest companies in the Bessemer steel pool was held at Pittsburgh Wednesday night. When it adjourned after midnight it was stated that the pool will be continued. Lower prices will be established. Another account says the pool will be dissolved. The dissolution of the billet pool would mean the breaking up of an association that controls $25,000,000 worth of property.

The working time of the shop and engine-house employees of the Missouri Pacific Railroad, in Kansas City, Kans., has been increased from six to nine hours per day. The order affects about 3,000 employees.

Arrangements are making for the sixteenth annual convention of the American Federation of Labor, which meets at Cincinnati soon for a session of eight or ten days. "The two English representatives have already arrived. There will be only 150 delegates, representing a membership of over 600,000. The paramount question this year will be to perfect a more complete organization of all the workingmen. More strenuous efforts will be made to have the eight-hour law go into effect."

The West Lincoln, Neb., packing houses, which were closed down last July, were to resume operations this week.

At a secret meeting at Cincinnati December 6, "the wood-working machinery manufacturers of the United States were consolidated, but no terms can be learned. About $20,000,000 is involved. It is understood that all of the leading manufacturers in this line have already consented to go into the consolidation, and that the deal, while many details are yet to be arranged, will go through."

The stevedores employed on the docks of the Crosby Transportation Company on the Muskegon, Grand Rapids & Milwaukee Railroad, at Muskegon, Minn., are on strike on account of a cut in wages from twenty to fifteen cents per hour.

The Chattanooga *Tradesman* says: "The movement in southern iron is good, and the production is being largely increased by the blowing in of idle furnaces. Cole Furnace No. 2, at Sheffield, Ala., will be put in blast this week after being closed four years, and a furnace at Florence, Ala., will blow in soon. Birmingham iron for export continues in active demand, and inquiries were received last week from Holland, Italy and other foreign countries. In Tennessee the Dayton and Embreville furnaces will be blown in at an early date."

The Hartford Carpet Company has started 250 looms in the Brussels department at Thompsonville, Ct., which has been closed for over four months.

Commercial.

The following is a statement of the ocean commerce of the port of Tacoma for eleven months ending November 30, 1896, compiled from reports of the harbormaster of that port: Imports from China, Japan and Europe aggregated $4,732,422. Exports included 2,545,689 bushels of wheat, valued at $1,673,367; 303,438 barrels of flour, $904,599; 75,991,664 feet of lumber, $687,713; 299,813 tons of coal, $895,494; merchandise to China and Japan, $2,681,412, and merchandise to British Columbia, $307,431, making a total of $7,149,976, as compared with $4,164,584 for the same period last year, or an increase of $2,985,392.

The following table is made up from figures supplied by the San Francisco *Commercial News*. It covers exports from that port to the countries named during the present crop year of 1896–97, up to November 25:

	Wheat, centals.	*Flour, barrels.*	*Value wheat and flour.*
Australia	378,274	92,686	$725,854
South Africa	141,919	570	199,425
India	480,937	....	626,620
Totals	1,001,130	93,256	$1,551,899

Financial.

The Western Union Telegraph Company reports for quarter ending December 31:

	1896.	1895.	1894.
Net revenue	$1,600,000	$1,603,416	$1,580,966
Interest and sinking fund	243,359	243,557	243,901
Balance	$1,356,641	$1,359,859	$1,337,065
Dividend	1,191,960	1,191,949	1,191,934
Surplus	$164,681	$167,910	$145,161
Total surplus	7,960,588	8,022,533	7,531,621
For six months.			
Net	$3,187,533	$3,446,065	$3,394,560
Balance	2,700,815	2,958,951	2,007,853
Surplus	316,894	575,057	523,996

These securities, among others, were sold at auction this week in New York:

10 Shares North American Rubber Company, $100 each (hypothecated)	$5 lot
50 Shares Herring-Hall-Marvin Company, common, $100 each (Manhattan Trust Company certificate)	6¼%
10 Shares Herring-Hall-Marvin Company, common, $100 each (Manhattan Trust Company certificate)	7½%
100 Shares Green Bay, Winona & St. Paul Railroad Company, preferred	4¾
$1,000 Cincinnati, Jackson & Mackinaw Railroad Company first mortgage bond	46½
10 Shares The Jersey Machine Company	$260 lot
20 Shares Title Guarantee & Trust Company	271½
691 Shares The American Distributing Company	30
$25,000 Cutter Silk Manufacturing Company of Bethlehem, Pa., first mortgage 6 per cent. bonds, due 1915	$14,000
$20,000 Cutter Silk Manufacturing Company bonds	$11,000
10 Shares Herring-Hall-Marvin Company, preferred	32½
15 Shares New Central Coal Company of Maryland	8⅞
30 Shares United States Casualty Company	100
$5,000 Terminal Warehouse Company 6 per cent. gold mortgage bonds, due 1942	72
$5,000 Terminal Warehouse Company 8 per cent. debenture bonds	70½
500 Shares Ohio Central Railroad Company	$7 lot
10 Shares Herring-Hall-Marvin Company, common	8½

A dividend amounting to 4 per cent. has been declared on the capital stock of the New York & Harlem Railroad Company, payable January 2, 1897, by the New York Central & Hudson River Railroad Company.

The American Sugar Refining Company has declared a quarterly dividend of 3 per cent. on its common stock, and on its preferred stock 3½ per cent. for that portion entitled to semi-annual dividends, and 1¾ per cent. on that portion entitled to quarterly dividends, all payable January 2.

The Cleveland, Cincinnati, Chicago & St. Louis Railroad Company has declared a quarterly dividend of 1¼ per cent. on its preferred stock, payable January 2.

The Manhattan Railway Company has declared a quarterly dividend of 1½ per cent., payable January 2.

The executive committee of the Western Union Telegraph Company has recommended the declaration of a quarterly dividend of 1¼ per cent.

The Minneapolis & St. Louis Railroad Company has declared a dividend of 2½ per cent. on its first preferred stock and 1½ per cent. on its second preferred stock, payable January 15.

The P. Lorillard Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable January 2.

The Western Union Telegraph Company has declared a quarterly dividend of 1¼ per cent., payable January 15.

The New York *Journal of Commerce* says: "The fire loss of the United States and Canada for the month of November, as compiled from our daily records, amounts to $5,211,800. The losses by months are exhibited in the following comparative table:

Month.	1894.	1895.	1896.
January	$10,568,400	$11,805,600	$11,040,000
February	11,297,600	12,360,200	9,730,100
March	9,147,100	14,239,300	14,839,600
April	11,540,000	11,018,150	12,010,600
May	10,777,800	7,761,350	10,618,000
June	8,282,300	9,223,000	5,721,250
July	16,307,000	9,085,000	9,033,250
August	10,432,800	9,929,000	8,895,250
September	10,149,900	10,766,300	8,200,650
October	8,186,700	13,411,500	8,993,000
November	12,135,800	10,131,500	5,211,800
Totals	$117,925,400	$119,820,900	$104,293,500

Railroads.

The Lehigh Valley line in New York reports for the quarter ended September 30:

	1896.	1895.	
Gross	$1,588,067	$1,226,802	Inc. $361,265
Operating expenses	984,113	829,023	Inc. 155,090
Net	$603,954	$397,779	Inc. $206,175
Charges	250,957	205,452	Inc. 45,505
Balance	$352,997	$192,327	Inc. $160,670

The annual report of the state railroad commission to the governor of Kentucky shows the total assessed value of railroads for the year is $51,970,057, a decrease of $200,989 from last year. Total mileage operated is 3,046, an increase of three miles. Total gross earnings for 1896 were $18,286,870, an increase of $1,129,669. Net earnings $5,607,026, a decrease of $41,203, indicating an expenditure of $1,180,870 in improvement in roadways and equipment. The report says: "In view of the fact that the country has been passing through a great panic which has affected all branches of business, it is gratifying to state that the volume of traffic and gross earnings of Kentucky railroads for the year ending June 30, 1896, were considerably larger than in the preceding year, demonstrating beyond question that business prosperity is gradually but surely returning."

The all-rail east-bound shipments of dead freight from Chicago last week were 72,166 tons, against 61,866 tons the previous week and 72,672 tons the corresponding week of the previous year.

The following October gross and net earnings are reported:

OCTOBER.

	—*Gross earnings*—		—*Net earnings*—	
	1896.	1895.	1896.	1895.

Miscellaneous.

"Cotton Facts," the annual compilation of A. B, Shepperson, of New York, is again available. The tabulations are complete, and are serviceable to all who are concerned in the cotton trade or industry, directly or incidentally.

In the January number of *Harper's* a paper entitled "Science at the Beginning of the Century," by Dr. Henry Smith Williams, will be an important contribution to the history of nineteenth-century civilization, and will be followed by other papers showing the progress of scientific discovery during the last hundred years. These papers will be fully illustrated.

Assistant Secretary Hamlin of the Treasury Department has refused to accept a general bond for all goods imported by an importer when stored in his private bonded warehouse, in place of the special bond now required for each entry of imported merchandise. A general bond covering an indefinite number of shipments would furnish no basis for an estimate of the duties, says the Assistant Secretary, and the complicated indorsements thereon would soon result in confusion.

Foreign.

Latest Tacoma mail advices from China "state that the Russian government has secured permission from China to extend the Siberian Railroad through Northern Manchuria, and also, in case of war, to have possession of a warm water post on Chinese territory. These important concessions, it is set forth in the articles of agreement, are made in consideration of Russia's friendship to China in the settlement of the China-Japan war, in which settlement Russia prevented Japan from taking possession of Manchuria."

A dispatch to the London *Central News* from Hamburg says that 4,600 men are working about the docks, and that ninety vessels are loading or discharging. The number of strikers who are returning to their work is constantly increasing, and from present indications the end of the trouble cannot be far off.

The president of the Merchants' Guild, Stettin, writes "that Cleveland's reimposition of port dues on German vessels will probably not directly or seriously damage German commerce. The damage will be greater for America, because of higher freight tolls to be paid by Americans. The indirect damage to German commerce will become greater if the German government replies with new aggravations or restrictions on American imports and fresh reprisals are thereby caused."

The Paris *Journal des Transports* publishes some interesting statistics showing the rapid development of electric tramways in Europe during the past year, "the number of lines in working order having increased from 70 to 111, while the total length of lines has gone up from 437½ miles to 564. Germany heads the list with a total length of 255 miles and 857 auto-motor vehicles, France being second with 82½ miles and 223 vehicles, while England is third with 67 miles and 168 vehicles, Switzerland coming fourth with 29½ miles and 86 vehicles. Bulgaria and Denmark are the only countries which have no line with electric traction. Of the 111 lines now being worked 91 are driven by wires overhead, while 9 have a central rail, 8 accumulators, and 3 an underground current."

British merchants at Colon "have organized for strenuous efforts to extend their trade over the South American country. They are striving particularly to spread England's manufactured wares through Ecuador, Peru, Chili, Uruguay and the Argentine Republic."

A London dispatch states that "the Coates Thread Company has absorbed the Finlayson, Bousefield & Co.'s thread works in Scotland, and it is endeavoring to secure control of Scotch and American factories of the Knoxes."

The *Canadian Magazine* raises the question whether Canada has not gone too far in giving aid to railroad building. "It appears that on June 30 last year there were 16,091 miles of track laid in Canada, and the Dominion government has contributed to this building at the rate of $9,369 per mile constructed, the provincial government at the rate of $1,847 and the municipalities at the rate of $881 per mile. That is, for the net result of 16,091 miles Canada has contributed in round numbers the very liberal sum of $195,000,000."

At the annual dinner of the English Electrical Engineers the president said "that the commercial supremacy of the British empire was initiated by our being the first to employ, on a large scale, the coal at our disposal. If coal ceased to be necessary for our industries he doubted whether the empire would maintain its commercial supremacy. In the falls of Niagara there was a waste of more power than could be derived from all the coal that could be raised throughout the world, and there were many other falls than Niagara. It would be the work of the engineer to utilize those falls, and then we should either have to live on our accumulations or we should have to flit. The commercial supremacy of Great Britain would have gone."

The Portuguese government "has signed a contract for a loan on the security of the tobacco monopoly, the proceeds of which are destined for the purchase abroad of four new war vessels."

The late improved position of the London speculative market is shown in the monthly report made by the *Bankers' Magazine* of the aggregate value of securities dealt in at the London Exchange. The October report showed a decrease of £45,000,000 in the value of these securities, which, in the report to November 20, was nearly recovered. The following are the figures:

Aggregate value of 325 representative securities on October 20, 1896	£3,156,386,000
Aggregate value of 325 representative securities on November 21, 1896	3,196,750,000
Increase	£40,364,000

The largest gain was in British funds, which fell in value £18,000,000 in October and gained £19,000,000 in November. English railways increased £8,600,000 and American railways £3,500,000. Kaffirs fell in market value £4,132,000, and industrial companies advanced £1,006,000. There was a decrease in foreign securities and in other items.

As a result of the international conferences held at The Hague in 1893 and 1894, the first International Private Law Treaty relating to civil procedure was signed there recently "by the representatives of Holland, Belgium, France, Switzerland, Luxemburg, Spain, Portugal and Italy."

At the recent London Royal Statistical Society meeting Mr. John Biddulph Martin's inaugural address on "Some Developments of Statistical Research and Methods During Recent Years" was read by Mr. R. H. Hooker. "He said it was for the statistician to discriminate between an ephemeral phenomenon and the inception of an economic movement, and to present essential facts in a well-digested form for the consideration of the economist."

Communications have been reopened between the English Foreign Office, the French and the German governments, "pointing toward another conference on the sugar-bounty system."

RECENT LEGAL DECISIONS.

[Prepared expressly for BRADSTREET'S.]

Taxation—Exemption—Manufactory.

The Supreme Court of Louisiana held, in the recent case of Moore vs. City of New Orleans et al., that a manufactory not operating five hands usually and customarily is not exempt from taxation under article 207 of the state constitution.

Life Insurance—Policy—Date.

The Supreme Judicial Court of Massachusetts held, in the recent case of Walker vs. John Hancock Life Insurauce Company, that where a policy of life insurance provided that the full amount of the policy would be paid if the insured died "after one year from the date of the policy," the day of the date of the policy was not to be included, and that where the policy was dated July 25, 1894, and the insured died at 6.45 A. M. July 25, 1895, there could only be recovery for the amount due after six months from the date of the policy.

Warehouseman—Sale—Owner.

The Kentucky Court of Appeals held, in the recent case of Fields et al. vs. Blane et al., that where tobacco warehousemen have in the usual course of business received tobacco from one who was not the owner, they are not liable to the owner for its proceeds unless they were notified of his claim before the sale or before they had paid over or accounted for the proceeds, and that in an action by the owner to recover the proceeds, where the evidence as to the notice to defendants of his claim were conflicting, the court erred in taking that question from the jury by instructing them to find for plaintiff if they believed from the evidence that he was the owner.

Corporation—Creditor—Stock—Fraud.

The Supreme Court of Louisiana held, in the recent case of Poitevent & Favre Lumber Company et al., that where it appeared from the evidence that the president of a going corporation disposed of a portion of its surplus stock of mules to a creditor, with the consent and approval of its board of directors, under the impression that the company was solvent and with the object of tiding over a temporary financial embarrassment and without interrupting the operations of its plant, it was not liable to an attachment on the ground that the evident intent of the president and board of directors was to fraudulently dispose of the property of the corporation so as to give to some of its creditors an unfair preference.

Limitation—Action—Accident.

The Kentucky Court of Appeals held, in the recent case of Carden, Adm'r, vs. Louisville & Nashville Railroad Company, that in an action by an administrator against a railroad company to recover damages for the killing of plaintiff's intestate by the willful neglect of defendant, the cause of action having originated under the general statutes, the prior right of action was in the children of the intestate, who was a widow, and, therefore, the cause of action accrued at once upon the death of the intestate, one of the children being then over twenty-one years of age, and limitation was from that date. The court did not deem it necessary to determine whether if the cause of action had been one which survived to the personal representative, and the sole right of action had been in him, limitation would run from the death of the intestate or only from the appointment of the administrator.

Freight Train—Passenger—Accident.

The Kentucky Court of Appeals held, in the recent case of The Louisville & Nashville Railroad Company vs. Bell, that in an action against the appellant railroad company to recover damages for personal injuries received by the appellee while a passenger on one of defendant's freight trains, the court did not err in permitting appellee to testify that "he did not see very well," as the connection in which the statement was made showed that it was not intended to convey the impression to the jury that appellee's vision was materially defective except as it may have been incidentally affected by the darkness surrounding him at the time and place he was speaking of in his testimony; that it was not competent for the appellee to prove that there had been on the route a quarrel between other passengers in the caboose and the trainmen, as such testimony, even if it could be competent in any event to show malice, was not competent in this case, because there was nothing to show that the trainmen who had the quarrel had anything to do with the switching of the cars which resulted in the injury to appellee; that while a passenger on a freight train assumes the additional risk, if any, in excess of the risk of traveling on a passenger train, the carrier owes to a passenger on one of its freight trains as high a degree of care as if he were riding on a passenger train; that passenger carriers can not by contract relieve themselves from liability for personal injuries to passengers caused by the negligence of the carriers or their servants, such contracts being against public policy; that a passenger on a freight train under a contract for transporting his stock for which he has paid the freight charges must be regarded as carried for hire, and that it was error to give an instruction authorizing the jury to award punitive damages if they believed the acts of defendant's employees were willful or malicious, there being no competent evidence to justify a finding upon either of those grounds.

Homestead—Exemption—Debt—Waiver.

The Supreme Court of Georgia held, in the recent case of Branch vs. Ford, that where, under the provisions of section 2040 and the following sections of the Georgia code, the head of a family seeks to establish a homestead estate in his property, which consists of a tract of land comprising a number of acres greater than that specifically allowed to be exempted, a survey of the land to be allowed as a homestead and the record of such survey are essential to the setting apart of the land to be protected by the homestead right, and until this is done the homestead is not set apart, or the right of exemption established, and that until the homestead is actually set apart the head of a family may lawfully waive his right thereto, and a judgment based upon a debt, in the creation of which such waiver was made, may be lawfully enforced in opposition to the right of the head of a family thereafter to make the exemption complete.

Corporation—Agency—Contract.

The Supreme Court of Georgia held, in the recent case of The Louisville & Nashville Railroad Company vs. Tift, that where a corporation holds out to the world a person as its general agent, with ostensible authority to act for and bind it as such, other persons dealing with such an agent are not bound by private limitations upon his authority, of which they have no notice or knowledge; that where such a general agent, in carrying out a contract made by himself for his principal with another who acts upon the faith that the agency is general, employs a sub-agent to attend to mere matters of detail within the scope of the contract, the principal will be bound by the acts of the sub-agent thus performed, especially if it appears that these acts were ratified by the general agent himself, and that a letter written by a general agent relating to matters apparently within the scope of his agency is, when pertinent to the issue under investigation, competent evidence on the trial of an action against the principal, and the party offering the letter may prove the agent's admission that he wrote it.

Note—Action—Presumption—Indorsee.

The Court of Appeals of Maryland held, in the recent case of McCosker et al. vs. Banks et al., that where fraud in the origin of a promissory note is proven, it is incumbent upon the indorsee to show that he or some preceding indorser took the note in good faith for value before maturity, without knowledge or notice of the fraud. The court in disposing of the case referred to the fact that the indorsee, when plaintiff in an action upon a note against the maker thereof, is not bound to show the circumstances under which he obtained it, quoted from a prior decision the following statement of the law: "But if the defendant shows by such proof as may be properly left to the jury to consider, that the instrument was procured by fraud, or was fraudulent in its inception, or that the consideration was illegal, or that it had been lost or stolen before it came to the possession of the holder, the burden of proof is changed, and it is then incumbent upon the plaintiff to show that he acquired the note bona fide for value, in the usual course of business, before maturity, and under circumstances that create no presumption that he knew of the existence of the facts that impeached the validity of the instrument. This is a well-established rule as applicable to negotiable instruments, and it is said to be wise and salutary in the protection that it affords. It proceeds upon the presumption that the person who has been guilty of the fraud or illegality in obtaining the instrument would dispose of it, and would place it in the hands of another person to sue upon it; and it is because of such presumption that the proof of fraud, illegality or loss casts upon the holder the burden of showing that he is a bona fide holder for value, or under what circumstances, and for what value, he became the holder of the note."

BUSINESS NOTES.

Another Grain Elevator at Galveston.

The Baltimore *Manufacturers' Record* says: "Announcement has been made of another grain elevator that will be built at Galveston, Tex., for handling grain at that port. This plant will be erected by the Texas Star Flour Mills, which has already an elevator of 400,000 bushels capacity. The new plant will have a capacity of 300,000 bushels, and * * * arrangements will be made immediately for the awarding of contracts for the construction of the buildings and the installation of the machinery. This plant, together with the new 700,000-bushel elevator of the Galveston Wharf Company, for which plans have just been accepted, will give the Texas port a total capacity of 2,400,000 bushels."

British Trade.

The president of the British Board of Trade, speaking at the annual dinner of the Croydon Chamber of Commerce recently, cited statistics to show that British external trade was "generally increasing, and that in the balance of trade between this country and Germany we were not losing, but gaining. Such an inquiry as Lord Rosebery had suggested with regard to the general export trade of Germany as compared with our own was now going on in the Board of Trade, and the progress already made with it had been sufficient to convince him that, though there was need for vigilance and enterprise on the part of the British manufacturer, there was nothing whatever in the figures to call for alarm as to the future."

French Colonial Expenses.

According to the Paris correspondent of the London *Economist*, M. Jules Siegfried, who was charged to draw up the report on the colonial budget in the Chamber of Deputies, states in that document that the expenses borne by France in 1887 amounted to 44,468,374 francs, and have increased in the estimates for 1897 to 83,728,840 francs. The outlay to be borne by the colonies is 95,664,700 francs, making together 179,302,233 francs. The trade of the colonies, however, advanced from 322,360,631 francs in 1885 to 510,232,255 francs, the imports and exports being in about equal portions. But the share of France in that trade, notwithstanding the extension of the protectionist system to the colonies, was only 122,183,107 francs in the imports and 119,501,342 francs in the exports.

Competition in Steel Production.

The daily papers announce that the actual purchasers recently of a large tract of land in the Calumet river region of South Chicago are the Standard Oil Company and the Rockefellers, who have "bought $500,000 worth of real estate from the Calumet Canal & Dock Company, embracing 3,600 feet of dockage along Lake Michigan and the Calumet river. Upon this land the Rockefeller interests will build the largest steel plant in the country, including blast furnaces, steel rail mills and mills for the manufacture of structural iron. The total cost of the plant will be $10,000,000. This new enterprise will bring the Standard Oil Company into direct competition with the Carnegies. The Rockefellers already own great ranges of iron mines in the Lake Superior region, and a fleet of steel steamers, which will carry the ore to the Calumet river. This fleet is to be increased next season. Building operations are to commence early next year."

Russian Trade and Industry.

The British consul at Moscow, Mr. Medhurst, in reporting on the progress of Russian trade and industry, as evinced by the Nijni-Novgorod exhibition of the current year, writes: "To those who, like myself, saw the Moscow exhibition of 1882, the progress made during the last fourteen years must appear very great. Every branch of manufacture, every source of natural wealth, has been attacked simultaneously and successfully. The development of the natural wealth of the country is even greater than that of the manufactures. The output of coal has trebled during the last fifteen years, and though naphtha is being obtained from Baku in ever-increasing quantities, new springs have been sought for and found near Vladikavkaz. Cotton planting prospers in Tashkent and Erivan, and yet new fields are being sown at Kutaish and Agdash, in the southern Caucasus, where results obtained are excellent. Costly experiments with tea growing near Batoum have produced a Russian tea which is shown with much pride, and the energetic General Annenkoff is busy planting Turkestan with American vines. Tobacco is also being grown from American seed near Samarcand. The increased output of the iron mills is, no doubt, due in a great measure to the extensive railway building now going on, but, generally speaking, every branch of industry has improved during the last decade with the exception of agriculture, where matters appear to grow worse and worse every year, the farmer being in a very impoverished condition."

Competition with British Shipbuilders.

Mr. Doxford, M.P., a leading Wearside (English) shipbuilder, addressing his constituents recently, "alluded to the rapid growth of shipbuilding and engineering on the continent. He had, he said, received a circular from the Austrian government offering tempting terms to those who would assist in establishing a shipbuilding yard at Fiume. There was no doubt that foreign governments were making strenuous efforts to compete with the British industries and were enlarging their establishments to keep pace with the demand. He suggested that a deputation of workmen should be appointed to make a tour of the rival shipbuilding yards on the continent. He would subscribe liberally towards such an object, and other shipbuilders would gladly do likewise, so that he would guarantee, if such a deputation were appointed, that the whole of their expenses would be paid. He thought they would gain something from such a tour, and would return home astonished, not only at the magnitude of the work being done, but also at its quality. The only stipulation he made was that the deputation should consist of bona-fide workingmen."

Iron Ore Prices for 1897.

The *Engineering and Mining Journal* says: "The question of iron ore prices for 1897 is beginning to be a very general topic of discussion throughout the large district where Lake Superior ores are the chief supply of the blast furnaces. The Lake ore men throughout the past season maintained the high rates which were fixed at the opening of 1896, notwithstanding the unfavorable conditions of the market, and the furnacemen found themselves obliged to pay those prices in spite of the low quotations for their iron. This, of course, increased the advantage held by the large companies which control their own ore supplies, and were therefore enabled to put down their ores at the furnace at actual cost of mining and transportation. In previous years a sharp decline in pig iron output, such as we have seen this year, would have been followed by a reduction in the prices of lake ores, but this year it has not been the case. Should the production again increase, as anticipated, the lake ore men can easily meet the demand, as they are in position to mine and ship any quantity of ore which can possibly be called for. So far they have given no intimation of their intentions. Should they decide to name higher rates, as has been reported, or even to maintain last season's prices, there will be a strong protest from the furnacemen and a great deal of argument before contracts are closed."

Proposed American Pacific Cable.

The *Engineering News* says: "The Pacific cable bill, advocated by the Pacific Cable Company, is to be pushed in the next Congress. This bill would authorize the Postmaster-General to contract to pay $100,000 per year for twenty years, for the construction and operation of an electric submarine cable connecting San Francisco and Honolulu, and such places on the coast of Japan and China as the company may select, with the approval of this government. The company is to deposit $100,000 in United States bonds, to be forfeited in case of non-fulfillment of contract. This contract would require the company to complete the line to Honolulu before January 1, 1898, so that it be capable of transmitting not less than fifteen words per minute; within one year thereafter the line to China and Japan must be built. The company may establish landing stations on the Midway Islands, between Hawaii and Japan, and belonging to the United States. United States government messages are to be transmitted free forever and to have preference, and the rate for ordinary messages between the United States and Japan and China shall not exceed $1.25 per word, and 35 cents per word to Honolulu. Press rates shall not exceed one-fourth of the cost of private messages. The House committee has reported favorably upon this bill. The length of the cable route would be 2,097 miles to Honolulu and 6,500 miles to Japan, and with 16 per cent. of slack the cable itself would be about 7,500 nautical miles long. The cost of the cable and the necessary repair ship is estimated at $7,500,000. This would be the longest cable in the world, and the deepest soundings show 3,185 fathoms. The Pacific Cable Company is a New York state corporation, with $10,000,000 capital."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

There has been no improvement in general trade this week, except in holiday specialties. At Augusta, Louisville, Nashville, Charleston, Chattanooga, Cincinnati and Memphis the condition of business is unchanged. Like reports come from Cleveland, from Providence, Chicago, Omaha and Duluth, where activity is confined to the retail demand for holiday goods and requests for staples continue moderate. The situation at Milwaukee, Galveston and Birmingham, Ala., is characterized as disappointing, but at St. Paul and Minneapolis there is more active demand for drugs, groceries, shoes and hats, and at Jacksonville, Savannah, Atlanta and New Orleans for staple goods. Distribution of merchandise in Texas has been checked by those who have held back cotton, awaiting higher prices. Unseasonable weather has again delayed demand for winter goods, and the approach of the period for stock-taking will prolong the season of dullness well into next month.

The tendency of prices is more conspicuously downward, noticeably for Bessemer pig iron, steel billets, rails, hides, leather, flour, wheat, corn, oats, lard, cotton and petroleum. Comparatively steady quotations are reported for raw wool, print cloths, lumber, pork and sugar. Coffee is higher. Many who have been extremely bullish as to wheat prices regard a reaction as likely, notwithstanding the outlook for greater firmness and higher quotations during the latter than in the first half of the current cereal year. The collapse or impending dissolution of iron and steel pools or combinations encourages a belief that prices for those metals will range lower. This causes buyers to withhold orders. The demand for leather and morocco has fallen off, and a number of factories have been closed. Dry goods are depressed by the large stocks of print cloths in the hands of manufacturers, and although some New England woolen mills are well supplied with orders, there is no revival in woolen manufacturing. Some makers are waiting for the goods market to start up.

November gross railroad earnings, as expected, are the poorest for over two years. Total November earnings of 115 companies aggregate $38,154,762, a decrease of 10 per cent. from 1895, when there was a gain of 6.3 per cent. over November, 1894. The falling off is heaviest in the granger and central western roads and lightest in the southwestern group. Only one-fifth of all the roads reporting show gains. Only one Pacific company reports an increase, and only 2 out of 34 central western roads shows an increase. Total earnings of 113 companies for eleven months of the calendar year aggregate $408,675,841, a gain of 1.9 per cent. over a year ago, following an increase in 1895 over 1894 of 4.8 per cent. The grangers, trunk lines, coal, southern and Pacific roads are still ahead of last year, while the central western and southwestern groups' earnings are smaller than in 1895.

Bank clearings show the expected falling off, amounting to $1,065,700,000, or 15 per cent. less than in the preceding week and 6 per cent. less than in the second week of December, 1895. Compared with the corresponding week in 1894 the gain is about 4 per cent., but it is about 16 per cent. when comparison is made with the like week in 1893. Contrasted with the corresponding period in 1892, when the volume of business was large, this week's decrease amounts to 27 per cent. Decreases are also shown when comparisons are made with similar weeks in 1891 and 1890.

There are 381 business failures reported in the United States this week, another increase as compared with the average in recent weeks; 22 more than last week, 68 more than in the like week one year ago, but 2 less than in the second week of December, 1894, although 44 more than in the corresponding period in 1893. As compared with the like week in 1892 the increased number of failures this week is 83.

Investment securities are in fair demand at New York, and the better class of bonds display improvement. The speculative stock market has, however, narrowed to small professional trading, with limited fluctuations. The President's message and the meeting of Congress have caused a decrease of fears about the Cuban situation, and the existence of a short interest is an obstacle to attacks on prices. Exchange is higher on the renewed firmness of the London money market, and the making of loans on long sterling is still a factor in the situation.

Exports of wheat (flour included as wheat) from both coasts of the United States this week show a marked increase as compared with preceding weeks and corresponding weeks in preceding years, amounting to 4,222,714 bushels, contrasted with 3,653,000 bushels last week, 2,458,000 bushels in the corresponding week last year, 2,536,000 bushels in the week two years ago, 3,217,000 bushels three years ago, and as compared with 3,277,000 bushels in the corresponding week of 1892. Exports of Indian corn this week are also heavy, amounting to 3,541,288 bushels, twice as much as in the preceding week, nearly 50 per cent. more than in the corresponding week last year, and very much more than in like weeks in three preceding years.

General trade is quiet at Toronto, collections are fair and prices unchanged. The bad condition of country roads in Quebec has interfered with business at Montreal. Weather conditions have had a similar effect at Halifax. Shipments of lumber from St. John, N. B., to South America have exceeded those in any recent season. Lumbering in New Brunswick has been checked by unfavorable weather. The movement of produce in Prince Edward Island is more active and prices have improved. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $24,882,000 this week, a decrease of about 6 per cent. compared with last week, and almost exactly the same amount as in the corresponding period last year, but 14 per cent. more than in the corresponding week of 1894. There are 42 business failures reported throughout the Canadian Dominion this week, 5 fewer than last week, 3 more than in the week a year ago, 8 more than two years ago, and 4 less than in the like week of 1893.

FINANCIAL.

The Money Market.

In point of the volume of demands on it and activity, the New York loan market has lost ground during the past week. There is little inquiry from borrowers of any class, and the bank statement of last Saturday indicates by the large increase of legal tenders the extent to which country banks are increasing their balances here. It was, in fact, rumored that the city institutions contemplated a reduction of the rate, 2 per cent., now allowed on such deposits. This last, however, was denied. The Clearing House banks are paying gold freely to the Treasury, and their average holdings of specie showed a decrease last Saturday, while the free gold in the Treasury has risen to $133,114,000.

A little better supply of choice commercial paper is coming into the market, but that department is still very dull, and all acceptable offerings are quickly absorbed. Rates are on the basis of 3½@4 per cent. for best names and doubles. There has been no change of any moment in time money, except that some stock market borrowers are making preparations for the turn of the year, but the supply of funds from all sources is in excess of current demands, rates being 3@3½ per cent. for 30 to 90 days and 3½@4 per cent. for longer periods. Call money has ranged from 1½@2½, but 2 per cent. appears to be the maximum, and at this figure there is still some inquiry from bankers who are borrowing on 60 and 90-day sterling exchange.

The New York Banks.

The average items for the week ending December 5, as shown by the customary statement issued from the Clearing House on that date, exhibits a continuation of the tendencies in the money market that have been prevalent since the recent election. The only important variation is that, for the first time, there is a decrease, to the extent of $936,000, in specie, indicating that the inflow of gold has come to an end, and that the banks have actually lost gold through its transfer to the Treasury. On the other hand, the legal-tender holdings increased $4,841,000 for the week, making a net gain of $3,905,000 in the total reserves. The increase of $8,600,000 in loans is generally attributed to the borrowing by foreign banking houses on sterling exchange, and the increase of $11,000,000 in the deposits corresponds fairly well with the increase of cash, augmented by that in loans. As a result of the other changes the surplus reserve increases $1,052,000, the figures of the statement comparing as follows with those of the preceding week:

	Nov. 28, '96.	Dec. 5, '96.	Changes.	
Loans	$463,818,200	$472,441,800	Inc.	$8,623,600
Specie	76,613,000	75,676,900	Dec.	936,100
Legal tenders	77,457,200	82,299,000	Inc.	4,841,800
Deposits	490,634,300	502,046,000	Inc.	11,411,700
Circulation	20,218,000	19,997,700	Dec.	220,300
Total reserve	154,070,200	157,975,900	Inc.	3,905,700
Reserve required	122,658,575	125,511,500	Inc.	2,852,925
Surplus reserve	31,411,625	32,464,400	Inc.	1,052,775

At the corresponding period last year the surplus reserve was $20,294,275, against $32,900,650 in 1894.

The Boston Banks.

	Dec. 5, '96.	Nov. 28, '96.	Changes.	
Loans	$162,463,000	$161,823,000	Inc.	$640,000
Circulation	9,979,000	10,143,000	Dec.	164,000
Deposits	109,359,000	104,689,000	Inc	4,670,000
Due from reserve agts	25,678,000	22,250,000	Inc.	3,428,000
Legal tenders	7,273,000	6,309,000	Inc.	904,000
Specie	9,676,000	9,660,000	Inc.	16,000

Foreign Exchange.

Dullness and limited transactions have prevailed during the week. The supply of commercial bills is somewhat smaller, but inquiry is on a restricted scale. The features have been in connection with the London money market, and its influence on rates here and on the purchases of long bills and commercials to be carried in loans. At the beginning of the week the tendency at London was for money to become easier, discounts having declined to 2⅞ per cent. This was reflected here in the

firmer tone of the market for long bills and a decreased inquiry for that class from bankers to be carried to its maturity. Posted rates were reduced ½c. on Tuesday—to 4.84@4.87—and sight sterling was quoted 4.86⅛@4.86¼. The advance of money in India and a very firm condition of affairs in Berlin had, however, an immediate effect in London, where discount again advanced to 3@3⅛ per cent., and posted figures for exchange here were marked up on Thursday to 4.84½@4.87½, while actual business in demand bills was firm at 4.86½. One of the features in the early part of the week was the appearance on the market of long sterling, evidently taken out of loans and representing sales by speculative holders of exchange whom the decline in money at London had disappointed in regard to holding the bills for a profit at their maturity. On Friday the market was firm, but dull, at a slight further advance.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Dec. 5.	Dec. 7.	Dec. 8.	Dec. 9.	Dec. 10.	Dec. 11
4.84½	4.84½	4.84	4.84	4.84½	4.84½
@	@	@	@	@	@
4.87½	4.87½	4.87	4.87	4.87½	4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86¾	4.86½	4.86⅛	4.86¼	4.86½	4.86½
@	@	@	@	@	@
4.86¾	4.86¾	4.86¼	4.86½	4.86½	4.86¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83¾	4.83½	4.83¼	4.83¼	4.83½	4.83½
@	@	@	@	@	@
4.83¾	4.83¾	4.83½	4.83½	4.83½	4.83¾

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.87@4.87¼; commercial bills, 4.82¼; francs, 5.20@5.18¾; reichsmarks, 94⅞@95⅝.

The Bank of England rate remains at 4 per cent. The bank this week gained £106,000 specie, and the proportion of the reserve rose to 54.09 per cent. from 53.81 per cent. In the London open market money is firmer at 2½ per cent. on call, and discount at 3@3¼ per cent. The feature of the European financial situation is the Berlin market, where the bank rate is 5 per cent., and loans in the open market unusually strong at 4⅞ per cent., while 6 per cent. is quoted for money till January 1.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending December 4, 1896:

	1896.	1895.
Dry goods	$1,515,579	$2,587,916
General merchandise	6,883,765	8,364,980
Totals for the week	$8,399,344	$10,952,896
Previously reported	414,766,499	480,557,719
Since January 1	$423,165,843	$491,510,615

The exports (exclusive of specie) from New York to foreign ports for the week ending December 8 were $1,463,101 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$8,616,171	$7,778,672
Previously reported	357,067,577	319,984,330
Since January 1	$365,683,748	$327,763,002

Silver.

Prices for bar silver have hardened again to a slight extent in sympathy with firmer money in India and the strength of India exchange. The bank rate at Bombay is up to 9 per cent., and on Thursday the allotment of India Council bills was made at figures rising to 1s. 3 13/32d. per rupee. Bar silver, which had been quoted at 29⅞d. per ounce in London and 65¼@65⅛c. here, rose on this to 29 15/16d. and 65⅜c. in the respective markets. The trading in silver bullion certificates in this market for the week aggregated 45,000 ounces at 65¼@65⅜c.

THE STOCK MARKETS.

The New York Stock Market.

Congress having actually assembled, the speculative market has apparently lost much of its fear regarding the action of that body and its influence upon the financial situation. The professional Wall street operators manifested a disposition to sell the market last Monday on the appearance of the President's message, on the ground that the treatment of the Cuban question was not as conservative as had been expected, and that the reference to trust organizations would encourage legislative attacks on the industrials, not only in Congress, but in the state legislatures. The message, however, produced little or no liquidation of long stock, and the introduction, as soon as Congress got to work, of a variety of resolutions in reference to Cuba had practically no effect. In fact, the street seemed to be under the influence of reports from Washington indicating that the present Congress was unlikely to take positive action of any kind in the short time that remains of its existence. Holders of stock seem unwilling to sell, and bearish manipulation simply increases the short interest and creates a foundation for rallies. The utter absence of outside participation in the market is, however, severely felt, and the transactions from day to day have been on a very limited scale, and were due in the main to the smaller operators of the board room itself. The strength of the better class of bonds and investments generally is a feature, but the demand in question is sharply drawn so far as securities of a speculative character are concerned. At the same time a feeling asserts itself in speculative circles that the augmentation of the investment demand after January 1, especially if Congress fails to do anything calculated to disturb the situation, and if general business and railroad earnings should show decided improvement, will lead to a broadening out of the market, with more or less of a revival in its activity. This naturally tends to restrict bearish operations to attacks on particular stocks, though throughout the week the fluctuations have been generally narrow and devoid of particular significance, and for the greater part of the time the market has been in a waiting state. Europe has taken no part in the speculation here, and the weaker tone of the foreign exchange market has been without any influence on stocks.

Sugar furnished more than its usual proportion of the total transactions. There appears to be a large short interest in it, and the fear of anti-trust legislation or of some change in the tariff duties affecting the company's raw materials or product tend to deprive it of any manipulative support from inside interests. Its course was irregular within narrow limits, the price declining from 116¼ to 115, with a rally to 117⅝, a further decline to 116¼ following. Chicago Gas was fairly active, falling from 77 to 73¾, apparently on the prospects of increased competition. American Spirits was rather neglected, declining from 14⅛ to 12⅞ on the belief that the non-participation of certain large concerns in the proposed distilling pool will defeat its purposes. New York Consolidated Gas was affected unfavorably by the passage of a gas franchise to a new company in the board of aldermen, which fact offset the advantages expected to accrue from the alleged arrangement between the existing companies to regulate competition and divide territory. General Electric was something of a feature, and rose from 32½ to 33⅞ on the news that the Metropolitan Traction will put underground electric power upon a number of its lines, presumably using the system controlled by the General Electric. It is also stated that the General Electric Company is considering the retirement of its preferred stock by a bond issue. It was, however, weak on Friday, falling to 31½. Western Union was comparatively neglected and unaffected by a rather poor statement of earnings for the current quarter.

In the railroad list the features were not very striking. The granger railroad stocks are heavy on poor earnings, and the prospect that they will continue for the immediate present. The short interest in St. Paul and Burlington is, however, sufficient to cause rallies in those leading stocks from time to time. St. Paul's course was variable within the figures 75⅝@74¼ as its extremes, and Burlington was similarly affected. The reports that Louisville & Nashville will resume dividend payments early next year failed to create any interest in the stock. Union Pacific, after a decline from 11½ to 9⅞, rallied to 10⅜ on the part of the President's message referring to the necessity of action by Congress on the question of the government's claim against the subsidized roads, and the belief that the position is becoming favorable to the prompt reorganization of the property. Reading has been affected by reports that the legality of the reorganization may be attacked in Pennsylvania. Some of the specialties were the objects of attention, "Big Four" being weak on selling based on reports of continued poor earnings, while Hocking Valley was strong on buying, accompanied by rumors that the company had allied itself with the Vanderbilt roads, and that the latter interest or their allies were acquiring the company's securities. Long Island was weak, declining to 47 on rumors that the dividend will be passed, though the fact that the stock has had no protection since the death of the company's president, the late Mr. Corbin, is apparent, and it is announced by the management that steps are being taken to readjust its finances, which have naturally suffered during the long continued depression of business.

Boston Stock Market.

The market has shown a generally quiet tone during the week, although some special stocks have attracted attention. Atchison has ruled quiet and closes ⅜ point lower, with Chicago, Burlington & Quincy steady at 1⅛ points decline compared with a week ago. New York, New Haven & Hartford stock has advanced ½, Boston & Montana closes ¾ lower and Butte & Boston unchanged. Sugar advances ⅜ in price with good sales, while Bay State Gas closes ¼ higher.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending

A MODERATE TRADE.

DEMAND FOR STAPLES AGAIN CHECKED BY UNSEASONABLE WEATHER. LOWER PRICES IN MANY LINES. ACTIVITY OF DEMAND FOR CHRISTMAS SPECIALTIES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, December 11.—The tone of business has been slow in nearly all kinds of merchandise, although general values have held quite steady. The money market is listless, with a surplus of funds, and an absence of collateral loans or mercantile paper offering. Call loans are quoted at 2@2½ per cent., with time loans at 3½@4 per cent. as to date. The choicest factory paper is quoted at 3½ per cent. The boot and shoe trade is quiet, with few new orders; some of the larger factories are well supplied with business. Leather is dull, but is held steady outside of oil grain leather, which has been marked off 1c. from the previous advance. Hides are dull, but fairly steady at the decline. Offerings are small and the take-off is kept closely sold up. Lumber is quiet but steady. Spruce is firm.

Providence, December 11.—There is no improvement in general business over last week. The dry goods and grocery trades are quiet for the season. Manufacturers of woolen goods report no revival of business as yet.

Philadelphia, December 11.—Wool continues dull and uninteresting. Buyers are few and no large sales are made. Manufacturers are complaining generally of poor trade. Very little doing in dry goods other than the demand incident to the Christmas trade. The mild weather has had a depressing effect upon leather and morocco; many factories are closing down, and will continue closed until after the holidays. Boots and shoes in fair demand and a steady market. Iron presents a hopeful outlook, although there is an unwillingness to place orders for any length of time ahead.

Pittsburgh, December 11.—The local business situation has not changed to any extent. There is a steady improvement in all staple lines and prices are fairly well maintained. Collections are still reported unsatisfactory and money is rather tight, although the banks are accommodating their regular customers. There has been but little business done in iron. Steel is practically at a standstill, owing to the uncertainty regarding the action of the members of the billet pool now in session here. Should the pool be dissolved a decided drop in the price of steel is looked for. There is likely to be a decided change within the next week.

Baltimore, December 11.—Business has been reasonably quiet in all branches. Collections still continue satisfactory.

West and Northwest.

Cleveland, December 11.—Retail holiday trade has set in with fair prospects, but jobbing business is quiet and unchanged, the general situation being improved only in sentiment and outlook for next spring, which is regarded as encouraging. Country collections are fair.

Cincinnati, December 11.—Trade continues quiet.

Detroit, December 11.—Open weather has had a demoralizing effect upon the movement of seasonable goods. In other lines business is only fair. Collections are slow.

Chicago, December 11.—The only striking activity noticed among the jobbing houses is in Christmas novelties, candies and nuts, which are being ordered freely. Staple goods are being taken moderately, orders being small sized and mostly by mail, but sales generally compare well with last year. Warmer weather has curtailed the demand for heavy woolens and shoes, and the decline in hides of 1¾c. from the top prices has checked purchases of leather by large consumers, who demand lower prices, which tanners are slow to grant, as they cannot replace the leather at current figures. There are moderate orders for light hardware and more inquiry for bar iron in carload lots. Large buyers who recently placed orders are also furnishing specifications to have them filled. Deliveries of pig iron on previous sales are larger than last month and prices hold steady, but new business is light. A better inquiry exists for steel rails, but buyers are holding off and trying to secure lower prices, without success. Fair sized orders are being placed for steel, but the prices are withheld. Hardwood lumber is more active, but white pine is rather slow. Butter is firm. Eggs lower, with larger receipts, and produce generally quiet. Wool receipts 154,517 pounds.

Louisville, December 11.—The tone of general business is good, but no very material increase in the volume of trade is noticeable. Collections are up to the average for the season.

St. Louis, December 11.—General trade is fair, but does not show an increase over last week. Conditions are satisfactory and encouraging for a betterment after the first of the year. The approach of stock-taking time also tends to restrict purchases to actual needs. A majority of manufacturers of boots and shoes are running full handed. The hide market is quiet and weaker, and tanners seem determined to force down abnormally high prices of hides. Rubber goods are active despite warmer and dryer weather. The coffee market is firm, the better grades being

scarce. Sales of holiday goods are equal to the same period of last year. Collections are fair.

Kansas City, December 11.—Business is very quiet. Collections are fair.

Milwaukee, December 11.—Jobbers and merchants generally claim that trade is not up to expectations, there being considerable complaint. Collections are dull.

St. Paul, December 11.—There is an improvement in the grocery and drug trades as compared with last week. Dry goods dealers are busy with sorting-up orders. Boot and shoe and hat and cap houses are booking advance orders, and the outlook is for better business than last season. Trade in hardware is only fair. Collections are very satisfactory.

Minneapolis, December 11.—Milder weather has had a depressing effect on general business, though in dry goods, shoes and heavy hardware a fair movement of merchandise is noted.

Duluth, December 11.—Jobbers and manufacturers report trade fairly satisfactory, with good prospects for spring business, but orders for immediate shipment are small. In retail lines the approach of the holidays has had a stimulating effect.

Omaha, December 11.—The demand for holiday goods has improved trade. Collections are dull.

Sioux Falls, December 11.—The approach of the holidays has had a more noticeable effect on wholesale and retail trade than for several years. Staple lines are comparatively quiet. Collections are good.

Southern Cities.

Charleston, December 11.—A good demand is reported in groceries and meats. Dry goods are quiet. The demand for phosphate is better and collections are said to be about the average.

Savannah, December 11.—Trade shows an increase over last week, with very fair collections. The naval stores market is firm at reduced prices. Receipts are heavy, with a steady demand.

Atlanta, December 11.—Sales in heavy groceries are reported steady—about same as last week. Collections are fair. A decided increase is noted in the sales of fancy groceries on account of coming holidays. Dealers in dry goods report a fair business. Hardware men report excellent trade and good collections. Liquor dealers report sales and collections good.

Augusta, December 11.—Wholesale trade is not very active, with collections inclined to be slow. Retailers are fairly active, owing to the beginning of Christmas trade.

Jacksonville, December 11.—Wholesale and retail circles show a gain over last week. City and country collections are coming in fairly well.

Birmingham, December 11.—General business is disappointing for the season. Collections are slow.

Chattanooga, December 11.—General business is unchanged. Some increase is noted in sales of wholesale candies, fancy groceries and liquors. Collections are unsatisfactory.

Nashville, December 11.—Business in groceries and holiday lines is very active. Otherwise trade is quiet. Country collections are very good.

Memphis, December 11.—General trade shows no change. Collections are fair.

New Orleans, December 11.—The country order trade has improved, and general conditions are more satisfactory. Cotton is lower and active, sugar quiet and steady, and there is a better demand for rice.

Galveston, December 11.—Warm weather has retarded trade in holiday purchases, and continued expectations for higher prices for cotton and the holding of that staple by farmers has prevented the usual activity in general trade and made collections rather poor.

Pacific Coast.

San Francisco, December 11.—Wholesale business is quiet, but retail fairly active, owing to the holiday trade. The demand for wheat is heavy in comparison with the amount on hand, and prices are firm, while freights are dull. No improvement is reported in collections.

Portland, December 11.—The movement of wheat is very slow and nearing the close for the season. Lumber is reported very quiet. The retail holiday trade is moderate. Collections are slower than last month.

Tacoma, December 11.—Holiday trade is very fair, but jobbers report a slacking up, owing to the usual preparation for annual stock-taking. A steamer recently arrived from China with tea and silk, and takes a return cargo of steel rails for Japan. The lumber trade maintains its usual volume, but wheat is less active.

Canada.

Toronto, December 11.—General trade has ruled quiet this week. Prices of general merchandise are steady. Collections are fair. Wheat and hides are lower.

Montreal, December 11.—Mild weather and the bad state of country roads are telling on general business. No special trade features are noticed. Collections are hardly satisfactory. The majority of jobbers are taking stock, but the results are not yet known.

Halifax, December 11.—Weather conditions have been unfavorable to business, and the volume of trade for the week has been light. Collections are only fair. Shipments of lumber from St. John, N. B., to South American ports this year have far exceeded those in any recent season. The weather in New Brunswick has so far been very unfavorable for lumbering operations in the woods. Prince Edward Island reports considerable activity in the movement of produce, with prices a little better. Some of the harbors are already frozen over.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only or four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Dry Goods.

The market continues quiet, although buyers are taking seasonable fabrics freely as needed. General values are steady, and a fairly confident feeling is noticeable. Cotton goods are moving slowly, the large stock of print cloths in manufacturers' hands being one of the most depressive features. Buyers are not showing the anxiety to purchase ahead that they would were the supply on hand less extensive. Printed fabrics are selling fairly in a moderate way and bid fair to clean up well. Staple ginghams are steady but quiet, with fancies attracting no attention. The market for dress woolens is in fair shape as regards spring orders placed, with present business quiet. Some mills are well contracted ahead. Men's-wear woolens are quiet. Samples of heavy weights for next fall are being got ready to show, and some fall orders for overcoatings have already been booked.

Wool.

Sales have fallen off largely of late, the present demand being dull. Prices are held fairly steady for all kinds, however, and holders are not disposed to press sales at the expense of price. Manufacturers have bought considerable wool, and are now waiting for the goods market to start. Until goods sell or tariff legislation gives a chance for speculation, the tendency is toward a slow business in wool. The London sale closed Thursday with best merino wools slightly higher than the opening, with other wools unchanged. American purchases at the sale were 22,000 bales. Next sale commences January 19.

RAILROADS IN 1895-96.

The Philadelphia *Ledger* says: "The business of railroad construction has been almost suspended for four years, nor does it seem likely that there will be a great revival under any circumstances, for the trunk lines were pushed to completion some years before they were needed, and it is probable that trolley lines will become the feeders of the future. During the twelve months ending June 30, 1896, only 1,949 miles of track were laid, an increase of only 1.09 per cent. This is the lowest rate of increase on record. Nor have the railroad companies added to their equipment, their lack of enterprise in this respect being due in part to the falling off in business, and in part to the large increase of rolling stock made a few years ago to move the crops and to accommodate the increase in passenger traffic due to the World's Fair at Chicago. The report of the Interstate Commerce Commission shows that there was a decrease of 9,050 in the number of freight cars in service in 1895–96, compared with the preceding year, and the number of employees has also been reduced, partly on account of dullness of trade, and perhaps in part by improvements to cars through the increased use of air brakes and automatic couplers. There were 873,602 railroad employees in 1893; 780,000 in 1894, and 785,034 in 1895. That means that the business of transportation is transacted on a scale at least 10 per cent. below the established figures of prosperous times. The large crops of this year and the European demand for our products, due in part to the crop failure in India, will no doubt help to restore the conditions of 1893.

"The loss of revenue from passenger travel last year as compared with the year of the World's Fair is estimated by the commission at $40,000,000. There were 593,000,000 passengers carried in 1893, 540,688,199 in 1894 and 507,421,362 in 1895-96. The freight moved increased nearly 60,000,000 tons, but was last year nearly 50,000,000 tons behind the 'record year' 1893-94. Rates have been forced down with the decrease of business so that the business has been comparatively unremunerative. The more important trunk lines have, however, been very prudently managed and have reduced expenses in proportion to the decrease of business, while they have at the same time maintained the efficiency of their lines and rolling stock. They are, therefore, in good condition to take advantage of the better times now apparently about to open up. The Pennsylvania Railroad Company, in its last annual report, which was for the calendar year 1895, showed for the three grand divisions east of Erie and Pitts-

burgh an increase of nearly $6,000,000 in earnings, an increase of little over $4,000,000 in expenses, and a resulting increase of $1,775,984.40 in net earnings from operating. The net income, which amounted to $10,530,432.38, exceeded the net income of 1894 by more than a million dollars.

"The Interstate Commerce Commission's report includes all the railroads in the country, and they of course do not show as good results as the Pennsylvania, which is one of the most prudently managed roads in the United States."

FERTILIZER TRADE OF CHARLESTON.

The *Oil, Paint and Drug Reporter* says: "In 1894-95 the fertilizer trade of this city amounted to 160,000 tons, as against 316,611 tons the previous year. It was reasonable to expect that there would be a large increase of this trade during the past year, and for the purpose of directing the business in a satisfactory way an agreement was made among the fertilizer companies early in the season to control the output and avoid, if possible, the disastrous effects which would have followed overproduction. From some cause or causes, of which we are not fully apprised, the agreement did not result so satisfactorily as it was hoped, and the aggregate business was not as large as conditions early in the season seemed to promise. The fertilizer companies in the interior, almost without exception, did well, sold their product, and made money, and are ready for the business of the new season with their resources well in hand. It is regarded as a mistake in some quarters that too many of the local companies have carried over stock which they should have sold during the season. It must not be inferred from this general statement, however, that none of the local companies did a good business during the year, for some of them did remarkably well, paid satisfactorily dividends to their stockholders, and are in excellent shape for the business of the new year.

"The prices during the season were so low that many northern parties bought large quantities of acid phosphate instead of crude rock, and as a consequence a considerable business was done.

"The following figures will show the last four years' sales of fertilizers:

	1893.	1894.	1895.	1896.
Port Royal	31,000	28,000	19,000	35,000
Savannah	120,000	116,000	77,000	90,000
Charleston	325,000	316,611	159,526	257,715
Tons	476,000	460,611	255,526	382,715

"The fertilizer industry is not by any means dead, nor is it likely to die. The south will make a large crop of cotton this year, estimated by some at 9,000,000 bales, and renewed activity in the business of manufacturing fertilizers will surely return. There is an increased demand for commercial fertilizers, and particularly for fertilizers of the grade manufactured by the mills in Charleston. The progressive state of North Carolina expended $2,500,000 for fertilizers during the past year, a gain of more than 50 per cent. on the consumption for the year 1894-95, and of fully 30 per cent. on the consumption of 1893-94."

DEBTS OF THE WORLD.

A London dispatch to the New York *Press* says: "National debts are comparatively recent, dating only from the Middle Ages. Some wise men have maintained, paradoxical as it may seem, that in these days when plain folk are better off than kings in the old days, a nation cannot prosper without a national debt. Certainly all nations of any importance have national debts, and the combined national debt of the world is rapidly increasing. They now amount to $29,000,000,000, as against $23,750,000,000 in 1875.

"The largest debt is that of France, which is $6,000,000,000, or nearly double the debt of England, which is second on the list, with $3,300,000,000. Austro-Hungary is third, with $3,030,000,000; Russia fourth, with $2,875,000,000, and poor old Italy fifth, with $2,530,000,000; the United States seventh, with $996,141,952. Though Spain is sixth, she is the only one of the lot which may be said to be completely bankrupt. Her debt is $1,395,000,000. The only hope she has of floating loans in the future is in the rich capital of the nation with the largest debt.

"Spain owes her money almost entirely to foreigners, while France owes only her own people. Nearly every nation in the world is also in debt to her citizens. France will lend Russia some more soon. The English say that that is the only object the Russians have in the Franco-Russian alliance, which is unworthy of English level-headedness. There are thousands upon thousands of Frenchmen —even the peasants have money invested in national debts—who are glad of the opportunity to get a good rate of interest from the Russians or from anybody else.

"As far as lending power is concerned the French are altogether the richest people in the world, for it is an invariable rule in France to lay aside a certain percentage of one's income, no matter how small the income is. France, at least, seems to be the proof positive of the theories of the wise men. She never was more prosperous than now, and the increase in her prosperity has kept pace with the increase of her national debt. But it doesn't follow that England or Germany would also prosper with the increase of a national debt. If nobody is worrying about France, who owes herself her debt, becoming bankrupt, certainly there is little prospect of her ancient enemy, Germany, with a national debt of only $420,000,000, being sold out by a sheriff.

"Following is the comparative list of the debts of all countries owing over $500,000,000 in 1875 and 1896:

	1875.	1896.
France	$4,500,000,000	$6,000,000,000
England	3,900,000,000	3,300,000,000
Austro-Hungary	1,750,000,000	3,030,000,000
Russia	1,700,000,000	2,875,000,000
Italy	1,950,000,000	2,530,000,000
United States	2,200,000,000	996,141,952
Spain	1,875,000,000	1,395,000,000
Germany	1,000,000,000	420,000,000
Australasia	230,000,000	1,200,000,000
Turkey	675,000,000	900,000,000
Portugal	345,000,000	765,000,000
India	650,000,000	635,000,000
Brazil	470,000,000	590,000,000
Egypt	375,000,000	530,000,000

"Australasia's great increase is noticeable, considering that English statesmen with the taste of sour grapes in their mouths are forever telling us how much better the loyal colonies are governed than are the thirteen colonies that went astray. Japan and the Argentine Republic, which are fast forging to the front, are among the new borrowers, the Argentine owing $370,000,000 and Japan $235,000,000. Other small borrowers are Belgium, with $455,000,000; the Netherlands, with $460,000,000; Canada, with $255,000,000, an increase of $100,000,000, and Greece, with $160,000,000. The total debt of the British empire, it may be added, including all British colonies, is $5,485,000,000, almost equal to that of France, money coming, of course, almost altogether from the mother country.

"One reason for the increase of indebtedness, it may be, is that money is so much cheaper now than it was twenty years ago. The total amount of interest on the world's debts approximates $1,115,000,000 annually. Twenty years ago it was as much as $1,000,000,000, in spite of the fact of the present increase in indebtedness of more than $5,000,000,000. In 1875 Spain and Mexico were paying as high as 15 and 18 per cent. Considering the amount of her indebtedness, France pays the lowest amount of interest. She pays out $185,000,000 a year in interest, as against England's $125,000,000, Russia's $120,000,000, Austro-Hungary's $185,000,000. In round numbers, but in fact, almost $1,000,000 more than France, though her debt is only $30,000,000 more than half as much, Italy's $117,000,000, and Spain's $56,000,000.

"It is also interesting to know that every Frenchman pays toward the interest on his country's debt each year $4.75, every Russian $1.20, every Englishman $3.15, every Austrian or Hungarian $7.50, every Italian $3.80, which comes harder than the Austrian's $7.50, every Spaniard $3.25, every United Statesian 42c., every Portuguese $3.90, and every German 33c."

THE REIGN OF THE MOTOR CAR.

The London *Iron and Coal Trades Review* says: "The event of the past week, unlike many events that are of general public interest, has a special significance and importance for the iron and steel industries. The motor-car movement is likely to provide those industries with a great deal of business that would not have come to hand but for the new régime. It is true that the manufacture of motors, like the manufacture of machine tools, is more a business for the mechanical engineer than for the metallurgist and ironmaker; but both alike depend upon the iron group of industries for their materials of construction, and hence every advance in appliances or machines that are dependent on iron and steel comes directly within the purview of this journal.

"That the motor car has come to stay is indubitable. No one, however pessimistic as to the events of Saturday, appears to doubt that there is a future for the motor car, and that its manifest destiny is to supersede in a greater or less degree the van, the lurry, the phæton and the cab. But it will be of much greater importance to the iron industries than any or all of these vehicles as they are, seeing that it will call for the supply of a special apparatus which, unlike the horse, has to be manufactured by the aid of the men of Sheffield, Birmingham and Middlesborough. As to whether the parade of motor cars on Saturday last was or was not a success we are not much concerned. There is, we believe, a little difference between the first canal, built by Brindley, and the great navigable highway at Manchester; between the first wagon that ran on the Stockton & Darlington Railway and the 60-ton wagons now employed on American railways to carry mineral traffic; between the 'Rocket' and the magnificent productions of the Crewe works today; between the marine engine built by Henry Bell for the 'Comet' and the engines of the Lucania. In all material progress two things have to be proved—the first that a new system is wanted, and the second that it is practicable. Both of these preliminary conditions have been met in the case of the motor car, and, that being so, the details of its improvement may be regarded as settled. On Saturday upwards of twenty motor cars succeeded in journeying from London to Brighton, representing, we believe, as many different systems. Had only one of them proved its capacity for such an achievement the future of the system would have been assured from that time forward—as it certainly now is.

"What, then, is the new motor-car industry likely to do for the iron and engineering trades? We believe that it is likely to do a great deal. The time is likely to come, and that, too, before long, when the highways of the country will be largely laid with rails to facilitate motor-car traffic, and we may witness quite as large a demand for rails for that purpose as we did in the building up of our railway system. As for the value of the motor-car industry itself, it is at present in the acorn stage, but, unless we greatly err, it will assume the proportions of a stalwart oak sooner than most acorns have succeeded in doing in the past. We therefore recommend our friends in the iron, steel and engineering industries to prepare for the new era, and to prepare quickly, otherwise they may find that the Germans, the French, or the Americans are already the 'men in possession.' British engineers are even now giving a full share of attention to the design and manufacture of the most suitable and economical types, and it is well that they should be aided in this endeavor as far as possible."

THE TRADE OF MEXICO.

The London *Economist* says: "Quite a favorable view of the development of Mexican commerce is taken by Mr. Consul Carden in his annual report to the Foreign Office for the year 1895. A great improvement has, he says, taken place in the past two years, and this he regards as the more satisfactory since it was based on the development of the general resources of the republic, and not so exclusively as in former times on the product of the silver mines. Dealing with the trade of the year 1895, the report states that the imports converted into sterling reached a value of £7,249,000, as compared with £6,043,800 in the previous year, while the exports were valued at £11,298,400, against £8,766,400. The proportion of the trade carried on with the principal countries is given in tabular form, and as figures for the fiscal year ending June 30, 1896, are now available, we have added these to the statement, in currency, as below:

MEXICAN FOREIGN TRADE, CALENDAR YEAR 1895.

	Imports		Exports	
Country.	1895.	1894.	1895.	1894.
Great Britain	£1,378,215	£1,226,096	£1,640,714	£1,338,669
United States	3,243,502	2,093,751	8,682,879	6,668,807
France	1,194,827	893,156	307,084	275,810
Germany	776,958	569,353	333,685	271,454
Spain	396,564	404,010	82,589	87,504
Other countries	257,943	257,424	252,047	184,049
Totals	£7,249,609	£6,043,790	£11,293,398	£8,766,383

FISCAL YEAR 1895-96.

	1895-96.	1894-95.	1895-96.	1894-95.
Great Britain	$7,905,016	$6,668,321	$16,467,149	$15,201,169
United States	20,145,763	15,130,367	79,651,695	67,322,936
France	6,099,183	5,576,750	2,080,802	2,129,816
Germany	4,303,220	3,361,643	2,968,792	3,113,235
Spain	2,174,298	1,918,561	813,162	914,160
Other countries	1,566,449	1,344,498	3,020,302	2,113,787
Totals	$42,253,933	$34,000,140	$105,016,902	$90,854,953

Each of these comparisons show that a considerable expansion in trade was experienced, the totals, in fact, being larger than in any previous year, except during the period of railway construction in 1888-90. Next to the United States, whose geographical position naturally places her in a predominant position, the United Kingdom holds the largest share of the foreign trade of Mexico. We send, in fact, 60 per cent. of the imported cotton goods, and some 30 per cent. of the iron and steel, mainly in the form of railroad material. A point on which Mr. Carden lays great stress is the development of the local cotton industry, which, he says, cannot but have a serious significance for English trade, and he promises to devote a special report to this subject later on. Referring to the prospects of British trade generally, Mr. Carden deplores the absence of English mercantile agencies, in consequence of which English goods are dependent for their sale on foreign firms. As these firms cannot be expected to put themselves out to push English manufactures, our consul is strongly of opinion that the only prospect of opening up new branches of trade is by means of an association of several firms for the establishment of an English agency, so as to insure their goods being brought under the notice of consumers."

ELEVATOR WHEAT STOCKS AND LOW PRICES.

The Cincinnati *Price Current* says: "In the elevator controversy at Chicago before Judge Tuley, Attorney Henry S. Robbins, representing the Board of Trade interests, advanced a novel and startling proposition. The evidence which will form the basis of his argument was presented yesterday. It consists of tables compiled from the reports of the warehouse commission and covering the period from 1873 to 1896. The proposition which the attorney will urge is that the big elevator men of Chicago are responsible for the general depression of the wheat market.

"According to Attorney Robbins, these tables show that the immense amount of grain kept constantly in store in Chicago elevators accounts for the depression of the market.

"The statistics show that while the capacity of the elevators has increased from 13,000,000 to 41,000,000 bushels since 1873, the total receipts are practically the same as they were in 1873. The additional capacity is being utilized, it is said, for keeping grain in store. Taking, first, grain of all kinds, the tables show that, with practically the same total receipts for 1874 and 1876, the speculative tendency had grown to such an extent that the least amount of grain in store in 1895 was twice the highest amount in 1874. The tables next deal with wheat. They show that the receipts of wheat during 1895 were less than in 1874, and the following deductions are made:

"The minimum amount in store in 1895 was forty-seven times that of 1874; the maximum amount of 1895 was seven and one-half times more than 1874, while the minimum of 1895 was four times the maximum of 1874. The condition of things in the wheat market was therefore worse than in the grain market in general.

"The object of the elevator men in keeping this grain in store is, Mr. Robbins argues, to keep prices low, so as to reduce the amount of capital invested. The controversy between the warehouse men and the Board of Trade began a year and a half ago when the Board of Trade sought to prevent the warehouse men from dealing in grain in the open market. It was claimed that the latter were violating their charter provisions, as they were buying and selling grain owned by other people which was merely stored in their warehouses. The warehouse commissioners decided against the elevator people and the case was then taken into court."

FOREIGN TRADE OF CANADA.

The London *Economist* says: "Advance figures of the bluebook shortly to be presented to the Canadian Parliament are available, giving the value of the import and export trade of the Dominion for the fiscal year ending June 30, 1896. These show that the imports amounted to £23 662,000, as compared with £22,156,000 in the previous year, an increase of £1,446,000, or 6.5 per cent. The exports were valued at £24,203,000, against £22,728,000, the increase of £1,475,000 being also equal to 6½ per cent. The value of the exports was larger than in either of the four previous years, while the imports, though, as stated above, considerably in excess of the immediately preceding year, were below any of the three antecedent to that. As regards the distribution of the trade, it is shown that while the United Kingdom took 55 per cent. of the exports of Canadian produce, the Dominion took from the mother country only 28 per cent. of her total imports. The exchange of commerce between Canada and the principal countries is given below:

	Imports from		Exports to	
Country.	Value.	Per ct. of total.	Value.	Per ct. of total.
Great Britain	£6,595,048	27.94	£13,337,800	55.11
United States	11,714,804	49.63	7,950,000	32.84
Germany	1,186,202	5.03	151,400	
France	568,180	2.38	116,200	
China and Japan	534,132		131,800	
West Indies	379,148	4.52	562,000	5.89
Newfoundland	110,282		356,400	
Australasia	42,707		103,400	
Other countries	2,530,704	10.50	1,493,600	6.16
Totals	£23,662,197	100.00	£24,202,600	100.00

GERMAN SHIPBUILDING INDUSTRY.

The Berlin publication, *Kuhlow's*, says: "German industry celebrated a great triumph at Stettin when the new steamer Friedrich der Grosse was launched. This is the first of the new class of large passenger and freight steamers which the North-German Lloyd Company is adding to its fleet, and is so far the largest steamer built in a German shipyard. Of the six steamers that the North-German Lloyd Company ordered last year, three of which are to be built by the Vulcan Company, of Stettin, this one was the first to be launched, only nine months after the order was given. Of the remaining two boats now in course of construction, one, the Königin Louise, will be a sister ship of the Friedrich der Grosse, while the other is to be a twin-screw steamer of 20,000 tons displacement, 625 feet long, and fitted with engines of 28,000 horse-power, and she will be the largest steamer afloat in the world, though her dimensions will be still inferior to those of Brunel's Great Eastern, built on the Thames in 1858. She was 679½ feet long, but the nominal horse-power of her paddle and screw engines combined was only 2,600. The two great Cunarders, the Campania and Lucania, are 601 feet in length, and their nominal horse-power is 5,000.

"The Friedrich der Grosse measures 525 feet in length, 60 feet in breadth and 38 feet in depth; her registered measurement is 10,000 tons and her displacement 18,000, with a draught of 28 feet. The total cargo capacity is 11,000 tons measurement, and she is provided with accommodation for 280 first and second class passengers, and up to 2,300 steerage passengers. She has two promenade decks, one above the other, of which the upper one will be reserved for first-class passengers. The midship house on the lower promenade deck is 256 feet long, and takes the whole width of the steamer. It has two wide passages, or streets, running along its whole length, which not only serve to give communication between the forward and after ends of the vessel, but insure splendid ventilation to the cabins on both sides of them.

"On the top of this midship house there is a deck-house 213 feet in length, containing in its forward end the first-class saloon, then some of the first-class cabins, and in the after end the second-class saloon, ladies' room and smoking room. The deck over this house is carried out to the sides of the vessel, forming on each side a wide covered promenade. Above this, on the upper promenade deck, are the captain's room, the first-class ladies' saloon, the smoking room, and the rest of the first-class cabins; this is again covered by a shade deck, on top of which are the numerous life-boats, kept ready for immediate use.

"Though the Friedrich der Grosse is intended primarily for the Atlantic trade, special care has been taken to fit her so that she can be suitable for service in the tropics. The state-rooms are fitted with every imaginable comfort and luxury, many of them being intended for a single occupant; for it is beginning to be recognized on these great floating hotels, that it is no more reasonable to force two people to share a state-room than to put them into a double-bedded room in a hotel on land. The bath-rooms are numerous, spacious and well-fitted. For the steerage passengers there are comfortable iron bedsteads between wide passages, which are furnished with benches and tables.

"On a draught of 26 feet the Friedrich der Grosse will carry about 8,000 tons of cargo. She has eight hatchways, with the same number of steam winches and derricks. She is driven by two sets of quadruple expansion engines of together 7,000 indicated horse-power. Steam is supplied by five double-ended and two single-ended boilers, and she is intended to have a speed of 14 knots. She is lighted throughout by electricity, the number of incandescent lamps of 25-candle power being 650, supplied by three dynamos. Her crew will consist of 170 persons all told, while finally her weight when launched was 6,000 tons.

"The Friedrich der Grosse and the ships that are to follow her are another indication of the vast strides that shipbuilding and steamer-owning have made in the last few years in Germany. It is stated that Hamburg is rapidly becoming, if it is not already, the largest shipping port in the world, while German lines of steamers are making their appearance, and with general success, on most of the principal ocean routes in the world. While German colonies have not so far been a conspicuous success, Germans make such excellent colonists under other flags, and Germany has become such a great manufacturing nation, and is so full of ability, enterprise and capital, that her growth as a maritime and commercial power is to be expected, nor should this excite any permanent jealousy in England. The more ships and foreign commerce Germany possesses the more does peace become her greatest interest, as it is that of Great Britain."

In the United States about 81 per cent. of the total number of concerns failing had $5,000 or less, and 13 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

FINANCIAL.

CENTRAL PACIFIC RAILROAD CO.

First Mtge. Gold Bonds.

Office of the Central Pacific Railroad Co.,
NEW YORK, Nov. 25, 1896.

This Company has made arrangements to extend its $3,997,000 First Mortgage Bonds, maturing Jan. 1, 1897, so that the Principal thereof shall become payable in one year from that date, viz.: on January 1, 1898, with interest meanwhile payable semi-annually January 1 and July 1, at the rate of 5 per cent. per annum. Principal and Interest payable in United States Gold Coin.

The right is reserved to redeem the Bonds so extended at any time, on paying to the Bondholders the par or face value of the Bonds and Interest thereon at the rate of 6 per cent. per annum from January 1, 1897, in United States Gold Coin, less such interest accrued subsequent to that date as may have been paid thereon before such redemption thereof.

The right of the Bondholders to avail themselves of such extension has been reserved to such holders as, PRIOR TO DEC. 15th, 1896, shall deposit their Bonds for that purpose with MESSRS. SPEYER & CO., NEW YORK, or with MESSRS. SPEYER BROTHERS, LONDON, or MR. LAZ. SPEYER ELLISSEN, FRANKFORT ON MAIN, or MESSRS. TEIXEIRA DE MATTOS BROTHERS, AMSTERDAM.

The extended Bonds will be stamped to show the extension, and new Coupon Sheets will be annexed, representing future interest.

Copies of the Extension Agreement can be obtained at the Company's Office and at the office of the Bankers above mentioned.

The present extension is made to the date of maturity of the latest maturing Central Pacific First Mortgage Bonds, on or before which date the Company expects to arrange a long extension of the entire First Mortgage issue.

C. P. HUNTINGTON, Vice-President.

BONDHOLDERS DESIRING TO AVAIL THEMSELVES OF THE PRIVILEGE OF EXTENSION UNDER THE FOREGOING NOTICE ARE ADVISED THAT, UPON PRESENTATION AT OUR OFFICE ON OR BEFORE DECEMBER 15TH, THEIR BONDS WILL BE STAMPED AND NEW COUPON SHEETS ATTACHED FREE OF CHARGE.

SPEYER & CO.,
30 BROAD STREET.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.—1896.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 19, 1896.

Public attention centered this week about the Cuban question and the probable action of Congress in reference thereto. Much excitement was produced by accounts of circumstances alleged to have attended the reported death of the Cuban general, Antonio Maceo, which evoked a strong feeling of sympathy for the Cubans. It was expected that this sentiment would be reflected in the action of the Senate Committee on Foreign Relations, and this expectation was borne out by the vote reporting favorably the joint resolutions of Senator Cameron. These resolutions, which are quite brief, simply acknowledge the independence of the republic of Cuba, and declare that the United States will use its friendly offices with the government of Spain to bring to a close the war between Spain and Cuba. Secretary Olney appeared before the committee to urge non-action by Congress, but apparently produced little effect upon the committee. The resolutions will be reported to the Senate on Monday next.

All doubt as to the fate of the Dingley tariff bill was removed on Wednesday. In the course of a rather acrimonious debate upon the question of tariff legislation, Senator Gorman said that the majority could not afford to pass the Dingley bill and disturb the business of the country at the next session, and, moreover, that the minority would not permit that to be done. This announcement led to the statement by Senator Platt, of Connecticut, that the Republicans never did have the votes to pass the bill, and had even less now than they ever had before. Finally Senator Sherman gave the bill the coup de grace by declaring that the Dingley bill could not be passed, and that it was useless to waste time over it. Meanwhile, the Ways and Means Committee of the House will go on with hearings looking to the preparation of a new tariff bill to be passed at the extra session.

Legislation excluding illiterate immigrants appears to find favor in Congress. The Senate on Thursday passed by a large majority the Lodge bill, which amends the act of March 3, 1891, by adding to the classes of aliens thereby excluded from admission to the United States all persons over sixteen years of age who cannot read and write the language of their native country or some other language, though providing that an admissible immigrant over such age of sixteen may bring in with him or send for his wife or parent, or grandparent, or minor child or grandchild, notwithstanding the inability to read and write. The test of ability to read is to be made on printed slips, each containing five lines of the Constitution of the United States in the various languages of the immigrants. It is provided that the act shall not apply to inhabitants of Cuba arriving from there during the continuance of the present disorders. The bill just passed by the Senate is a substitute for the bill dealing with the same subject passed by the House in May last. A conference committee will pass upon the points of difference between the two measures, and it is expected that little difficulty will be experienced in disposing of them.

The failure of the wire nail, steel rail and practically of the billet pools is followed by a drop of $3 per ton in the price of steel rails, within twenty-four hours of the meeting of the pool, almost before the adjournment of the latter body. Evidently the industries of the country which are in any way dependent on iron and steel are to have an opportunity to supply themselves with raw material on a reasonably low plane of prices. This would seem to be for the best interests of the entire business community, in that it would be placing the prices of the products in question more nearly on a parity than they have been with quotations in other lines. Railroad companies have bought only sufficient rails the past twelve months to cover actual needs, owing to the high price fixed by the pool. The consumption of steel rails for 1896 will amount to about 800,000 tons. Ordinarily the annual domestic consumption of steel rails is calculated at about 2,000,000 tons. The pool consists of the Carnegie, Illinois, Pennsylvania, Cambria, Bethlehem, Lackawanna, Maryland and Ohio steel companies. It is announced in the daily papers that the Ohio Steel Company agreed to make no rails, for which it receives "a fixed amount for each ton of its allotment." The rail pool was organized in November of 1893, and from a price which then hovered near $20 a ton put up the price to $22. From that figure the price has been advanced until $28 a ton was the price early this year. "The railroads had no recourse, as every rail concern in the country belonged to the pool." They decreased their purchases as the price went up, and this year they purchased fewer rails than for some years. When the Ohio Steel Company erected its plant at Youngstown it was hoped that it would break the railroad pool, but it became a member of the pool. Iron and steel people think the present cut in price will improve business. The reduction is expected to increase the drain upon raw materials, and consequently stiffen the general market. Already there is an effort making to revive the steel billet pool.

For the benefit of those who think that the meaning of the so-called short crop of wheat in the United States has been fully discounted by the advance in prices, it is in order to explain that it is the unexpected which generally happens. Various estimates of the American wheat reserves this year place them far below quantities held at like periods for many years—some say 65,000,000 bushels less than last year. One of the best indications of this is found in very small receipts at primary markets, notwithstanding comparatively high prices. In commenting on this situation, Beerbohm writes, December 4, that "it is therefore quite reasonable to expect that America may, at a given time, find itself absolutely independent and in a position to demand, practically, its own price for its wheat." It should also be remembered that the present season differs from previous ones in that both India and Australia are importers, instead of exporters, of wheat.

In his address before the sixteenth annual convention of the Federation of Labor, President Gompers spoke of what has been and what should be done in the direction of securing an eight-hour working day. He suggested the issuance of pamphlets, circulars and other literature upon the advantages of the shorter work-day, requesting all public speakers, newspapers and the labor press to make the aims and purposes of the eight-hour movement the theme of a simultaneous discourse, the issuance of circulars to the employers generally and directly, requesting the concession of the eight-hour work-day, the appointment of committees by local central bodies and local trade unions to wait upon employers with a view of securing the eight-hour work-day without cessation of work, the fnrnishing by officers of national, international and local trade unions of data as to the progress made in the matter of organization and preparation for the inauguration of a general movement to reduce the hours of labor, and the recommending to all organizations that an effort be made to secure a reduction in the hours of labor at as early a time as possible, and particularly during the spring, or May 1, 1897.

In its tenth annual report the Interstate Commerce Commission devotes considerable space to accounts of the principal decisions construing the Interstate law which have been rendered by the courts during the year covered by it, and with which our readers have been rendered familiar. There is an interesting discussion of the part played by railway associations in the development of modern transportation. A summary is given of the results of replies received from 1,690 companies in response to a request of the commission in April last, asking the carriers to show how far up to that time their equipment had been made to conform to the requirements of sections 1 and 2 of the Safety-Appliance act, relating to couplers and train-brakes, which become effective January 1, 1898. It appears that 80.53 per cent. of the 35,898 locomotives mentioned in these replies have driving-wheel brakes. Of the 33,323 passenger cars reported in use, 97.02 per cent. have automatic couplers, and 98.91 per cent. are fitted with train-brakes; 1,217,064 freight cars are reported, of which 29.58 per cent. have train-brakes, and 37.41 per cent. are equipped with automatic couplers.

The National Wool Growers' Association of the United States, which met this week in Washington, adopted resolutions recognizing the desirability of "immediate action to prevent the flood of speculative imports of foreign wools, which would occur in advance of a proposed increase of duties, and, while insisting upon the speedy preparation and passage of a law which shall give to the wool growers the 'most ample protection' promised by the St. Louis platform, and while doubting the expediency of passing the so-called Dingley bill in any event, and especially without other amendments, yet with the expectation that a proper wool-tariff bill will be enacted at an extra session of Congress, soon after March 4, 1897, and in a spirit of concession to the opinions of others, declaring it advisable to interpose no objection to the passage of the Dingley bill, providing only that amendments are incorporated therein removing the provision that the law shall continue until 1898, and providing that the duties on woolen, shoddies, wastes and other wool substitutes shall be practically prohibitory. Resolutions were also adopted urging Congress to incorporate in any tariff bill that may be passed this session or next the wool schedules adopted by the Wool Growers' Association at its meeting held in Washington in December, 1895.

GOLD SHIPPING PROSPECTS.

Our own exchange market has been governed this week mainly by the condition of money at London and Berlin. The position in both centers is somewhat strained, discount in the open market at London, which last week had receded to 3 per cent. or less, being again firm at 3½ per cent. In Berlin the position of the money market is even firmer, discount rates being quoted at 4 per cent. or higher. Under these influences the exchange market at New York displays a further hardening tendency. Demand sterling at the end of the week had reached 4.87¼@4.87½, and the corresponding quotation for reichsmarks—95¾ for sight drafts on Berlin—was considered sufficiently high to allow the remittance of gold instead of bills. Under these circumstances, the impression was created that the steamer leaving this port for Germany on next Tuesday may carry some gold, though the matter is still in doubt when this goes to press.

The conditions existing in the principal European money markets are peculiar. London continues to experience a reaction from the long period of exceptionally large supplies of funds and of rates of interest which encouraged speculation in all kinds of securities, good and bad. The situation in India, due to the famine, is still an important factor, the presumption being that India's demands for funds and assistance in one way or another will yet result in a serious drain in that direction. Berlin has also supplied its requirements freely in London, and the Bank of England's weekly return displays a loss of over £400,000 in specie, which is attributed mainly to the transfer of funds to the German capital. In fact, the tenor of advices from London for the past week has been that the entire market there is growing nervous as the turn of the year approaches, the presumption—which accords with the known facts—being that the last week of the month will be marked by more or less monetary stringency. The situation in Berlin is not so clear. Its position is apparently due to the fear of a drain of specie to St. Petersburg in connection with the Russian currency reform scheme. The latter matter, it is true, is still very much in the dark, but at Berlin, as at London, the end of the present year is not without its anxieties for financial and speculative interests, even if interest rates do not reach a level that would be considered here as indicative of positive stringency.

Comparing the easy rates which prevail in New York and other American financial centers at the present time and the accompanying plethora of funds with the position at either London or Berlin, the inducements for a transfer of banking capital to the latter are obvious. Moreover, it must be remarked that financial interests here are apparently indifferent to the probable loss of some gold at this juncture. The condition of the Treasury gold reserve, which has now risen to $134,000,000, virtually precludes anxiety on that score, and the state of the New York bank reserve is of an eminently satisfactory character so far as their ability to supply a reasonable amount of gold for shipment is concerned. The November trade statement issued by the Treasury, and which is given in detail in another column, would give a transfer of gold to Germany at this juncture the appearance of a temporary loan, to be returned later on. Outside of this is, furthermore, the fact that the restricted character of the exchange morket creates a general belief that very little gold could be shipped at present, as the sale here of any considerable amount of bills drawn against such transactions would necessarily depress the level of rates, and at the same time produce a hardening influence in the local money market.

The situation, it may be further remarked, is favorable to the continuance of borrowing upon long bills of exchange, and such transactions are still being made, though, possibly, not upon such a generous scale as was noted in these columns for several weeks back. Last Saturday's New York bank statement presented, however, another large increase in the average of loans, which can only be explained by reference to the continuance of heavy borrowings by bankers in connection with this class of transactions. The total increase in loans shown by the New York associated banks in the statements from November 7 to December 12, both inclusive, is $41,000,000, and even allowing for an increase in the accommodations granted to the mercantile community, the presumption is that the largest estimates of the sums that bankers have taken on long sterling as collateral is not far from the highest estimates. As much as £8,000,000 in bills has been named as the amount thus held. This may be an exaggeration, but it is permissible to suppose from what is known on the subject that the amount is probably not £1,000,000 away from the figures named.

It may be remarked that the London financial papers have apparently made a mistake in their facts and conclusions in the matter. It is, for instance, gravely stated there that the amount of sterling bills virtually discounted in our money market is not more than £1,000,000, and in other quarters which are usually well informed it is set forth that, so far as London has received assistance in our market, it has been in form of direct discounting of its own obligations or a borrowing upon securities here. It is needless to say that such views are not in accordance with the known facts of the case as we see them, and the comparative indifference with which American banking interests view the present possibility of demands for gold from abroad is based in a measure upon the liability of the mass of bills held for investment to come upon our exchange market, if any serious advance in rates such as would accompany a considerable movement of specie should occur.

PRELIMINARY FOREIGN TRADE STATISTICS.

Preliminary statistics of foreign trade for November and the eleven months ending therewith, corrected to the 14th instant, have been issued by the Bureau of Statistics of the Treasury Department. The figures show that the total exports of merchandise for the month amounted to $109,091,937, which represents an increase of over $21,700,000 as compared with the corresponding month of last year. The imports for the month were valued at $50,038,052, which represents a decrease of over $13,300,000 as compared with the corresponding month of 1895. The imports free of duty were valued at $27,821,053, which represents a decrease of over $4,700,000 as compared with corresponding month of last year, while the dutiable imports were valued at $22,216,999, which represents a decrease of over $8,500,000 as compared with the corresponding month of 1895. For the month of November, in both years, there was an excess of exports over imports, the excess amounting to $59,053,885 in November last, as compared with $23,967,764 in November, 1895.

For the eleven months ending with November the total exports of merchandise were valued at $888,680,369, which represents an increase of over $156,300,000 as compared with the corresponding period of last year. The imports were valued at $622,593,660, which represents a decrease of over $116,800,000 as compared with the corresponding period of 1895. The free-of-duty imports were valued at $290,054,236, which represents a decrease of over $65,300,000 as compared with the corresponding period of last year, and the dutiable imports were valued at $332,539,424, a decrease of over $51,500,000 as compared with the corresponding period of 1895. For the eleven months of the current calendar year the exports showed an excess over the imports amounting to $266,086,709, whereas for the like period last year there was an excess of imports over exports amounting to $7,137,281.

Imports of gold coin and bullion showed an excess over exports amounting to $6,924,148 for the month of November, whereas in November, 1895, the exports showed an excess of $13,468,188. For the eleven months ending with November the imports amounted to $100,197,486 and the exports to $56,336,988, an excess of imports amounting to $43,860,498. Last year, for the like period, there was an excess of exports amounting to $57,895,388. The exports of gold ore both for the month and the eleven months were trifling, the imports being in excess in each case. The exports of silver coin and bullion showed an excess of $3,197,712 for the month, as compared with an excess of $4,384,536 in November, 1895. For the eleven months the exports of silver coin and bullion amounted to $56,209,791 and the imports to $11,224,776, showing an excess of exports amounting to $44,985,015, as compared with an excess of exports amounting to $38,271,098 for eleven months of 1895. The imports of silver ore for the eleven months showed an excess over the exports amounting to $15,177,151, as compared with an excess of $11,127,735 in the corresponding period of last year.

INDUSTRIAL REVIVAL AND INVESTMENT DEMAND.

A careful survey of the business horizon at home and abroad leads one to the notion that the world appears to be ripe for a marked industrial development. There are no leaps and bounds likely with regard to prices or distribution in the near future, signs pointing rather to the slow and sure appreciation of demand, and then of prices. The "current revival" in England is declared by the *Iron and Coal Trades Review* to have lasted not more than twelve months, and it is not likely to run its course for two years to come. While all departments of British trade are not experiencing "bounding prosperity," many of them are—the tinplate industry, perhaps, least of all. The optimistic frame of the English mind is seen in the argument that "it is on the cards that the price of materials and the cost of labor may rise to such a level that the American tinplate manufacturers may not be able to compete with our own in American markets. The very general extension of naval and maritime resources among the more powerful nations, not to specify general municipal and building requirements for iron and steel, the largely increased railway construction projected in Central and South America, Japan, China, Australia, India and Russia, should, with the natural growth of industrial enterprise in ordinary lines during the coming year, furnish work for the world's industrial populations for some time to come.

One significance of the general revival in industrial activity is found in the increased preference, as contrasted with a few years ago, shown for speculation and investment in the class of securities called industrials.

It has been pointed out that one among several causes of the pronounced interest in industrial securities, more particularly in Europe, was the destruction of confidence in South American securities due to the Baring collapse in 1890. No sooner had the worst effects of the Baring crisis begun to disappear than the crash in Australia in 1893 came down on the British investor simultaneously with the panic of that year in the United States.

For some years prior to and up to the close of 1890 the surplus income of the British investor was "sunk to a great extent in South American stocks of one kind or another." Like funds were also flowing into Australasian banks on deposit, under contracts by the banks "to pay certain rates of interest for fixed periods, on the expiry of which the principal became repayable, unless the deposit were renewed at the current rate, which might be higher or lower than that of the original deposit, according to circumstances." The amount of money which was in this way going out of the United Kingdom annually to develop the resources of other countries was enormous. With the Baring crisis the flow of money to South America stopped, and at the Australian banking crisis the current of funds to Australasia was checked also. The result was the accumulation of vast amounts of uninvested capital in the United Kingdom, and for a protracted period these accumulations kept discount and loan rates at merely nominal figures.

A writer in the London *Financial News* delares that the English people having money to invest have discovered that it is better to have a moderate yield on capital with the safety of the principal fairly assured than a large yield when the safety of the principal is dubious. Many millions of pounds of British capital have been lent directly to foreign governments. Very many more have been sunk in commercial undertakings, such as railways, in foreign countries, and the total of British deposits in Australian banks is gigantic, as is its interest in American railroad bonds and shares.

Foreign governments whose finances have gotten awry are complained of for wanting to scale interest and principal, and foreign banks for wanting like concessions, while with reference to the United States it is gravely declared that while the danger of the basis of our currency being altered has passed, it is doubtful whether it may not return. European politics are said to be unfavorable to the investor in Spanish, Portuguese, Greek, Italian and Turkish securities, which goes far to restrict the speculative market.

It is considerations such as these which have tended to restrict the reinvestment of enormous sums of British capital in the past four or five years. That it will find an outlet in the near future is believed to be true. The recent African mining boom was an advance courier, and the recent noteworthy bicycle and motor car "booms" in England are regarded as further evidences.

The English investor has already placed hundreds of millions in American industrial enterprises, and, to judge from the revival of interest in the speculative side of industrial securities here, more British gold is likely to come this way to participate in the industrial expansion which seems likely to mark the year 1897 in the United States.

THE INTERNAL REVENUE REPORT.

Internal revenue receipts for the last fiscal year showed a slight increase over those for the year preceding. They amounted to $146,830,615, which represented an increase of $3,584,538 over the receipts for the preceding fiscal year. The principal classes of receipts, with the changes, as compared with the fiscal year preceding, were as follows: Spirits, $80,670,070, an increase of $807,443; tobacco, $30,711,629, an increase of $1,006,721; fermented liquors, $33,784,235, an increase of $2,143,617; oleomargarine, $1,219,432, a decrease of $189,778; banks, bankers, etc., $134 (first assessment); miscellaneous, including penalties, opium for smoking and playing cards, $445,113, a decrease of $183,600. The quantities of the various articles on which tax was paid were as follows: Spirits distilled from apples, peaches and grapes, 1,440,810 gallons, an increase of 338,107 gallons over the preceding year; spirits distilled from materials other than apples, peaches and grapes, 67,039,910 gallons—decrease, 7,132,432; fermented liquors, 35,829,098 barrels — increase, 2,264,687 barrels; cigars and cheroots, 4,237,755,943 in number—increase, 73,783,503; cigarettes weighing not over three pounds per thousand, 4,042,391,640 in number—increase, 714,987,860; cigarettes weighing over three pounds per thousand, 1,407,097—increase, 333,200; snuff, 12,548,599 pounds — increase, 1,717,125; tobacco, chewing and smoking, 253,667,137 pounds — increase, 5,397,499 pounds; oleomargarine, 47,623,773 pounds—decrease, 5,640,897 pounds. The cost of collecting the internal revenue was $4,086,292. The expenses of the bureau for the current fiscal year are estimated at $4,369,000 and the receipts at $150,000,000.

The grain distilleries registered during the fiscal year numbered 1,833, of which 1,351 were operated, showing a decrease of 116 in the number registered and of 270 in the number operated as compared with the preceding fiscal year. The large portion of the decrease in the number registered and operated occurred in the class of distilleries having the smaller capacities for the production of spirits, there having been a decrease of 111 distilleries of this class registered and of 229 in the number operated. In the class of larger distilleries there was a decrease of 5 in the number registered and of 41 in the number operated. During the fiscal year ended June 30, 1895, there were registered 1,683 distilleries of the smaller class, varying in daily grain capacity from not over five to not over sixty bushels each, and of this number 1,385, or 82 per cent., were operated; and of the larger distilleries having daily grain capacities varying from over sixty bushels to several thousand bushels each, 266 were registered, and 236, or nearly 89 per cent., were operated. During the preceding fiscal year, on the other hand, of the smaller distilleries 1,572 were registered and 1,156 were operated, while of the larger distilleries 261 were registered and 195, or 74 per cent., were operated.

There were 11 molasses distilleries registered and 11 operated, a decrease of one in the number operated, and of one in the number registered, as compared with the previous year. A very large increase occurred in the number of fruit distilleries registered and operated, there having been 4,845 registered and 4,825 operated, increases in the number registered and operated over the previous fiscal year of 3,925 and 4,028 respectively. The total number of grain, molasses and fruit distilleries registered during the year was 6,689, and the total number operated was 6,187. There was an increase of 3,808 in the number of all kinds of distilleries registered, and of 3,758 in the number of all kinds operated during the fiscal year ended June 30, 1896, as compared with the fiscal year ended June 30, 1895.

It appears that the quantity of molasses used for the production of spirits other than rum has become extremely large, amounting during the fiscal year to 3,507,609 gallons, with a product therefrom of 2,642,322 gallons of spirits. The quantity of grain used for the production of spirits during the fiscal year ended June 30, 1896 (18,630,618 bushels), shows an increase of 1,130,907 bushels over the actual amount of grain used in the preceding fiscal year (17,499,711 bushels, which is exclusive of 557,396 bushels included in last year's report as the equivalent of 3,583,264 gallons of molasses used for the production of spirits), and is 3,224,214 bushels less than the average (1,854,832 bushels) for the last ten years. The number of gallons of spirits produced from grain during the year (82,456,153) shows an increase of 4,283,641 gallons over the product for the year ended June 30, 1895 (78,172,512 gallons, which included the spirits produced from 3,583,264 gallons of molasses, reduced to its equivalent in grain), and was 11,681,196 gallons less than the average product for the last ten years. The yield of spirits from each bushel of grain was 4.42 gallons. The yield for the two preceding years was 4.42 gallons for 1894 and 4.32 gallons for 1895. The quantity of molasses used for the production of rum during the fiscal year (1,891,356 gallons) shows a decrease of 328,191 gallons from the quantity used in the previous year (2,219,547 gallons), and is 458,835 gallons less than the average (2,350,191 gallons) for the last ten years. The quantity of rum distilled from molasses during the fiscal year (1,490,228 gallons) shows a decrease of 286,855 gallons from the product of the previous year (1,777,083 gallons), and is 285,435 gallons less than the average product (1,785,663 gallons) for the last ten years.

Commissioner Miller makes some suggestions as to the amendment of the storage law. He says that under the general provisions of the law the privilege of removal to the storage in the general bonded warehouses is extended to all kinds of distilled spirits without exception, and consequently several of the warehouses so established have been mainly used for temporary occupancy by spirits for which the warehouses served merely as distributing agencies, instead of furnishing a convenient place for the permanent storage of spirits which require to be aged and ripened, as was contemplated by the statute. The practice of distributing these spirits designed for immediate consumption from the warehouse rather than from the distillery has resulted in delaying the payment of the tax thereon until the expiration of the period covering the transportation of the spirits from the distillery to the warehouse and their subsequent disposition to the trade, and consequently the natural loss of the taxable article occurring during such delay is, in respect to the tax, transferred to the government, instead of falling upon the owner, by whom it has properly been hitherto borne.

In view of these conditions the commissioner suggests the discontinuance of such of these warehouses as are manifestly not subserving the purpose of their establishment. He recommends that the statute relating thereto be so amended as to limit the privilege of storage in these warehouses to such spirits as may be approved by his office, and, further, that provision be made for a charge of not less than twenty-five cents each for the general bonded warehouse stamps and rewarehousing stamps which are affixed to packages of spirits upon transfer from a distillery warehouse to a general bonded warehouse, or from one general bonded warehouse to another, which charge, it is believed, would mainly defray the expense to which the government is put for the supervision and control of these warehouses. Unless action to this effect should be taken, he urges that the authority for their establishment should be withdrawn.

WEEKLY BANK CLEARINGS.

Weekly bank clearings returns, as expected, show a declining tendency, in sympathy with the quieter tone of general business and speculation. It is, however, in comparison with weekly clearings in previous years that the most interesting features of the year's record in bank operations become evident. It was pointed out in BRADSTREET'S a year ago in an article accompanying a similar compilation, that bank clearings are not necessarily an accurate measure of current business, though sometimes accidentally serving such a purpose. As was stated:

"The truth is that bank clearings are chiefly an approximate gauge of the business of the country over a considerable period of time, and draw their value from that circumstance. On the other hand, it should not be overlooked that when comparisons are made over a series of years such figures possess considerable value, as pointing out the volume or proportion of business transacted in similar periods in those years."

The fourth week of December, 1892, still retains the record as regards weekly bank clearings, with a total of $1,512,000,000. The next heaviest total was in the second week of November, 1890, following the Baring panic, when clearings aggregated $1,510,000,000. The heaviest week's total this year was in the first week of December, when the aggregate was $1,258,000,000. The billion-dollar mark was reached and passed sixteen times so far this year, against twenty-six times last year and six times in 1894. The smallest total this year was recorded in the last week of July, when the aggregate was only $811,000,000. It should not be forgotten that the introduction of the clearing-house system into Stock Exchange dealings has made it possible to avoid much of the transferring of checks formerly necessary, and has, to an extent not readily measurable, reduced the volume of clearings at New York, the country's great financial center. It is therefore safe to say that a great increase in activity in business and speculation is needed to bring the clearings aggregates up to the high-water marks of 1892 and 1890. It seems equally certain that the low-water mark which was set in the first week of September, 1893, when bank clearings aggregated only $651,000,000, will not be changed in the very near future.

WEEKLY BANK CLEARINGS FOR SEVEN YEARS.

*Week ending**	1890.	1891.	1892.	1893.	1894.	1895.	1896.
January 9	$1,216,000,000	$1,282,000,000	$1,455,000,000	$1,33[illegible],000,000	$1,006,000,000	$1,039,000,000	$1,235,256,000

* Actual date in 1896. Comparative dates in other years.

SOUTHERN MILL STOCK IN NORTHERN MARKETS.

No feature of the enormous material development that has been in progress in the southern states during the last two decades has a more substantial basis than the creation of the large textile manufacturing industry of that section. The tendency of northern, and particularly of New England, manufacturers to transfer a part at least of their capital to districts nearer to the region where the cotton is produced,

and the number of mills that owe their origin to local enterprise, have been steadily growing. This matter, in its various phases, has been frequently referred to in these columns, and illustrated by statistics showing to what an enormous extent the south has entered into competition with the older manufacturing states.

This growth of the southern mills in numbers, output and importance is, indeed, remarkable in itself, and points, moreover, to the generally successful character of such enterprises. There has, of course, been the inevitable percentage of mistakes and failures, but the fact remains that the cotton mills of the south are now a firmly established element in productive industry, while many individual cases of signal success present themselves in this connection.

A new phase of the matter is, however, presented by an article in the Boston *Journal of Commerce* of recent date—one, in fact, which has decided interest for the northern investor and the financial community at the larger centers of the country. It is recognized that the class of enterprises referred to in this article have passed beyond the experimental stage. Many of the southern cotton mills are permanent dividend-paying concerns, and the corporations owning them represent through their shares large tangible assets, as well as a positive earning power. Their success is a proof of the character and ability of their management, and they present in all respects the same features as the mills of New England and other districts, the corporate stocks of which are dealt in regularly on some of the northern stock exchanges. Yet it is pointed out that the stocks of southern mills are practically unknown in northern markets. This is a disadvantage to the southern mills themselves. The value of their properties is not understood by northern financial interests, and this militates to a large degree against their borrowing with the same freedom as northern mills, often with no better basis for credit, while the fact that their stocks have no general quotations is a bar to borrowing thereon, and, consequently, to investment therein.

The news, therefore, that some of the representative southern mill owners are taking action to have the stocks of their companies "listed" on the Boston and New York stock exchanges is, therefore, an important matter. No definite announcement in regard to it has been made, but it is stated, on the authority of the journal already quoted, that the managers of the exchanges have displayed a disposition to accede to the proposition. It, indeed, would be quite natural for the Boston Exchange to make southern mill stocks a feature of its list of securities, since, though public auction sales continue to be the favorite method of disposing of New England mill securities, properties of this kind find quotations and a market on the Boston board. As far as New York is concerned it would, of course, be in one sense an innovation. Southern securities are no strangers there, and manufacturing companies based upon southern industry have long been features in the Wall street market. Mill corporations have not, however, found much, if any, place there. In fact, the New York Stock Exchange, in adding to its lists, seems to discountenance dealings in the securities of corporations that are not of very considerable dimensions, and, therefore, likely to furnish material for transactions on a large scale. The example of the London Stock Exchange, which apparently aims at being the great clearing house in corporate securities and the values they represent for the entire United Kingdom, is apparently lost upon the powers that be in Wall street. If, however, this policy should be modified in favor of southern mill stocks and a market for them should be established at the metropolis, it might institute a movement in a new and important direction. It certainly, to judge by the experience of the New York stock market in recent years, would be based, if the southern mill properties were selected with care, upon a much better class of intrinsic values than many of the so-called industrials which have been welcomed to a quotation and market.

Southern interests, and those which may hereafter take advantage of the inviting field which the south presents for cotton mill and other industrial enterprises, would certainly he benefited should the plan above referred to take definite form. Not only would a wider market and definite quotations for the securities of the mills of that section facilitate financial arrangements on the part of the corporations and the owners of their stocks, but it would also tend to increase the investment of fresh capital in that direction.

THE SOUND CURRENCY PROPAGANDA.

Among the agencies which contributed to the defeat of the free-coinage party in the recent election, the sound currency committee of the New York Reform Club merits a conspicuous place. Its work was not limited to the campaign itself, for nearly two years before the election was decided, and more than a year and a half before the adoption of the Chicago platform, it had made preparations for an extended educational campaign. In the spring and summer of 1895 it was the only organization actively engaged throughout the country in opposing in a systematic way the attacks of the free-coinage propagandists, and it was naturally in a position to do notable work in the electoral campaign which ended in the election of McKinley. In an interesting report just issued it gives an account of the work done by it in the course of the last year—an account which will be found suggestive in view of the threats of a reopening of the silver agitation.

According to the report the best work of the committee was done through furnishing stereotyped plates and printed supplements, supplied free of charge by the committee to newspapers, whose coöperation in using them made the work effective. This method of educational work is declared to be undoubtedly the most effective ever used in any campaign. In no other way can so small an expenditure produce such great and certain results. In the opinion of many editors who used the plates and know their effectiveness, this newspaper work was one of the most effective agencies in defeating the party of repudiation and cheap money; and yet its total cost for the year has been less than $30,000—a small sum when compared with the immense sums spent by both parties in the old-fashioned ways of distributing in bulk during campaigns pamphlets and speeches of which at best only a small proportion ever reach the hands of those for whom they are intended. In addition to furnishing plate pages, speech plates, ready prints and broadsides or supplements, the committee kept up a constant supply of cartoons for newspaper service, and continued to publish at regular semi-monthly intervals its sound-currency series, maintaining its original character as a source of original and particular information for editors, bankers, business men, public speakers and writers, and that important body of men in general who are chiefly instrumental in forming public opinion. In addition, special calls for pamphlet literature more suited for general distribution led to the publication of a few popular numbers of especial merit. Finally, as the campaign drew to a close, the demand for short, pithy statements of fact and argument led to the preparation of a series of some fifty cards of convenient pocket-size, many of them bearing on one side a taking cartoon, and all of them simple and forcible presentations of the subjects with which they dealt, these being used for distribution at large political gatherings, particularly in the central western states.

Some idea of the extent of the work done by the committee may be gathered from the statement that it distributed pamphlets and other printed matter equivalent to 45,328,508 documents, reckoning plate pages, speech plates and broadside supplements as equivalent to sixteen-page pamphlets. These have been mainly of a popular character, the number of documents of a distinctively technical, literary and statistical character distributed being less than 600,000. Leaving out of consideration the literature from the sale of which money was received, the total net expenditures for the work done by the committee amounted to less than $67,000—a small total when the amount of the work done is taken into consideration. The committee had at the close of the year a small balance on hand. It suggests, however, that the aggressive attitude of the free-silver party since the election warns the people that they cannot afford to rest upon the victory just won, but that earnest efforts must be made to combat the arguments of the free-coinage agitators. In other words, the campaign of education must be continued. The committee has certainly proven itself worthy of cordial and hearty support at the hands of those who hope for better things as regards our currency system. It declares itself particularly gratified at having secured the confidence of numerous sound money editors in both parties, and it counts the good will of the 3,000 editors who have used its matter as its most valuable asset, and the one which augurs best for the future usefulness of this committee and for the cause of currency reform. The country newspapers afford, it says, the best means for reaching the homes of the people. Out of some 975 letters received in answer to a circular letter sent to these editors just before election, 666 express an unqualified willingness to continue to use such matter as the committee may issue, 205 are uncertain, and only 104 say that they do not care to continue the use of sound currency plates. Not less than 1,000 editors are ready to further coöperate with the committee and to begin at once aggressive work in favor of better banking and currency laws.

THE PENNSYLVANIA BANKERS' ASSOCIATION.

The Pennsylvania Bankers' Association held this week its first annual convention at Pittsburgh. The gathering was a representative one. In point of membership the result of the first year's work has exceeded expectations. The names of 353 bankers and trust companies have been enrolled, which represent fully 50 per cent. of the active concerns of the state. These facts were set forth in the annual address of President Rushton, which was read in his absence by Vice-President Day. Some interesting discussions were had during the proceedings. One of the speakers, Mr. Reuben Miller, of the Pittsburgh Clearing House, delivered an address of welcome, in which he dwelt upon the trusteeship of bankers. He said that too often in public speeches and in the press the word "banker" was used as if it were synonymous with robber or usurer, whereas the truth is that the capital stock of our banks is, in nearly every case, an aggregation of small amounts used and held by many individuals, and that the province and duty of the banker is to receive these small holdings as capital and the other and oftentimes larger amounts in deposit for the use of those who, without such assistance, could not undertake to give employment to the many who constitute the bone and sinew of the land. In exemplification of this position Mr. Miller pointed out that in one bank in Pittsburgh, out of a total of 24,000 shares, there are 674 shareholders, and 418 are women and estates; and, further, that the number of those having large holdings could be counted on the fingers, while those holding ten shares number less than 139. This, he said, emphasized the fact that all bank officers and directors are trustees in the broadest sense of the word.

In referring to the clearing-house system Mr. Miller asked what would have been the condition of this country had not the clearing houses of our large cities twice within four years sent forth for the benefit of the whole business world the strength of their allied assets in the form of clearing-house certificates? In 1841, he said, arrangements were made at Pittsburgh by the few banks to issue their certificates in relief of the suffering business community, and it was probable that Pittsburgh was entitled to the honor of being among the first to devise this form of relief. In a time of financial ease, after having passed through three periods of great monetary tension within seven years, the Clearing House Association throughout the United States must, he said, now assist in devising and perfecting a currency and monetary reform.

The system of finance must, he insisted, be so perfect that in times of distrust and need there shall be an abundance of well-secured circulation, which can and should be retired when the occasion for its issue has passed, and a condition should exist where no man having collateral or security should be refused discount.

The convention adopted resolutions declaring that the provision of the act of July 12, 1882, imposing limitations upon the reduction and increase of national bank circulation should be repealed; that the annual tax on circulating notes of national banks should be reduced from 1 per cent. to one-fourth of 1 per cent. per annum; that national banks should be permitted to count the notes of other national banks as part of their legal reserve, and should be permitted to issue circulating notes to the par value of the bonds deposited, and such notes to be redeemable in gold, and that the United States legal-tender notes and Treasury notes of 1890 now in the Treasury should be canceled and destroyed forthwith as fast as new circulation is taken out by national banks hereafter in excess of the amount now outstanding. The remaining United States and Treasury notes should be redeemed and

not reissued. Another resolution which was adopted heartily approved the recommendations of the Comptroller of the Currency in his recent annual report to Congress that in places of less than 2,000 people national banks should be permitted to organize with a capital stock of not less than $25,000, with a corresponding reduction of United States bonds required to be deposited with the Treasurer, and that in towns or villages where the population does not exceed 1,000, and where no national banks are established, they should be permitted to establish branches under proper regulations and restrictions.

UNION PACIFIC PROSPECTS.

In a paragraph of the recent annual message to Congress the Executive referred in a somewhat emphatic manner to the necessity of action in regard to the indebtedness of the Pacific railroads to the government. The alternatives presented were the ratification by Congress of some arrangement with the subsidized roads, or, in the case of the Union Pacific, of foreclosure proceedings, in which the United States, through its Attorney-General, would be a party. Even before Congress assembled the renewed activity of Union Pacific securities in the Wall street market gave evidence that financial and speculative interests were influenced by a belief that the virtual deadlock in regard to the Union Pacific reorganization would be broken. Rumors, in fact, circulated that the references of the President to the present unsatisfactory state of affairs in this connection would lead to the passage of a funding bill, and thus pave the way to successful reorganization of the property.

The actual developments since Congress assembled do not, however, give support to such hopeful conclusions. The consensus of opinion at Washington is that the short session of the present Congress affords insufficient time for the consideration of a measure of this sort, and that while the funding bill agreed on last summer by the majority of the House Committee on Pacific Railroads and the representatives of the Union might pass the lower division of Congress, its chances of success in the Senate were decidedly slim. A majority of the upper chamber are, to all appearances, opposed to any accommodation with the subsidized roads, and even in the House there is a considerable minority which is outspoken in its criticism of the whole matter. This is shown by the minority report of the House Committee, presented this week, in which the methods by which the subsidized roads wasted the government aid for their construction is severely treated, and the proposition to extend the government debt on the roads at 2 per cent. is strongly disapproved, the minority's contention being that the amount due the government should be extended at not less than 3 per cent., and that such action should be conditioned upon the government obligations being secured by a first lien upon the properties, and that, failing this, proceedings for the foreclosure of the property under the nation's present claims should be instituted.

It has been recognized that the position of the government is the key to the situation as respects a reorganization of Union Pacific. The existing committee, which bases its preliminary plan upon the foreclosure of the first mortgage, shows no lack of appreciation of the fact in question. In a circular issued this week the committee recount its efforts to secure the passage of a funding bill in satisfactory form, and the conferences its representatives had with the committee of the present House of Representatives, which resulted in the formulation of the bill now before Congress. The committee takes an important step in announcing that the existence of the plan shall be extended to July 1, 1897, further intimation being given that it will be necessary for the security-holders to prepare themselves against the contingency of foreclosure proceedings to enforce the claims of the government should Congress fail to adopt a funding bill.

Among other incidents this week was the issue of a plan of reorganization by a committee representing the collateral trust notes of the company. This proposition states that it is intended to act in harmony with the general committee. It seems, however, that the latter do not take the suggestions of the collateral trust note holders' committee kindly, and the trustees under the trust note agreement of 1891 unite in stating that in their opinion the proposals are undesirable, and in advising against their acceptance by the holders of the notes. The time fixed by the new company within which this plan shall become operative is limited to February 1, 1897, with the right on the part of the committee to extend it to May 1. The principal point upon which they insist in the explanatory matter accompanying their plan is that the interests of all security-holders, as well as those of the owners of the notes, would be injuriously affected should the ownership of the properties represented by the securities held in the trust be scattered, and that it is unjust to call upon the note-holders to accept a 5 per cent. obligation in lieu of one bearing 6 per cent., secured upon the same collateral.

COINAGE AND PRODUCTION OF PRECIOUS METALS.

Director of the Mint Preston shows in his annual report that the original gold bullion deposited at the government mints and assay offices during the year was valued at $68,769,383. The original silver bullion deposited represented a coinage value of $11,672,077. The purchase of silver bullion for subsidiary coinage was 184,578 fine ounces, costing $122,429. The coinage at the mints was as follows: Gold, $58,878,490; silver dollars, 7,500,882; subsidiary silver, $3,939,819; minor coins, $869,337—a total of $71,188,468. The total coinage of silver dollars from bullion purchased under the act of July 14, 1890, from August 13, 1890 (the date the law went into effect), to July 1, 1896, has been 47,544,776. The number of fine ounces of silver employed in this coinage was 36,772,912, costing $36,964,557, with a seigniorage of $10,580,218. From July 1 to November 1, 1896, there were consumed 6,776,936 fine ounces, costing $6,038,283, with a coinage value of $8,762,100, giving a seigniorage of $2,723,816—a total coinage under this act to November 1, 1896, of $56,306,876, with a total seigniorage of $13,304,034, leaving on hand at the mints a balance of 125,061,262 fine ounces, costing $112,865,625.

The commercial ratio of gold to silver for the year was 1 to 30.58, and the bullion value of a United States silver dollar at the yearly average price was $0.52262. The net gold exports were $78,904,612, as against $30,117,376 for the previous year. The net silver exports were $33,262,258, as against $27,631,789 for the previous year. The employment of precious metals in the industrial arts in the United States during the calendar year 1895 was: Gold, $13,429,085; silver, $12,277,024. The new material consumed in the manufacture of these bars was: Gold, $8,481,789; silver, $9,825,387. The metallic stock in the United States on July 1, 1896, was: Gold, $599,597,964; silver, $628,728,071—a total of $1,228,326,035.

The estimated production of the precious metals in the United States during the calendar year 1895 was as follows:

Metals.	*Fine ounces.*	*Commercial value.*	*Coinage value.*
Gold	2,254,760	$46,610,000	$46,610,000
Silver	55,727,000	36,445,000	72,051,000

The estimated production of gold and silver in the world for the calendar year 1895 was as follows:

Metals.	*Fine ounces.*	*Commercial value.*	*Coinage value.*
Gold	9,694,640	$200,406,000	$200,406,000
Silver	168,308,353	110,703,700	217,610,800

The total coinage of gold and silver by the various countries of the world was: Gold, $231,087,438; silver, $121,610,219—a total of $352,697,657.

TURKISH FINANCES.

By giving prominence in his message to Congress to the Turkish question, both in respect to its bearings on the rights of American citizens and in the broader sense of its relations to modern civilization, the President of the United States emphasizes the importance of the question to the family of nations. Whether the President's not unduly strong characterization of the disgraceful state of inaction to which their mutual jealousies and conflicting interests condemn the European powers in relation to the decrepit but still ferocious Ottoman empire may be doubted. A solution satisfactory to the humane instincts of the civilized world still seems far off. Nevertheless, everything relating to the Turkish government or misgovernment and to the hapless country itself possesses a strong interest at the present time.

In one respect the Turkish situation presents an example of the fact that financial considerations mingle in every question that arises at the present day. It is recognized that one of the Sultan's most serious troubles is the inability of his government to raise money, and the efforts that have been made to secure a loan, but without success, have been fairly ludicrous. On the other hand, there is a large Turkish debt already in existence which is held in Europe, and which for the past fourteen years has been administered by a council selected by the bondholders under the consent of the powers. Specified portions of the imperial revenues are set aside for the service and sinking fund of the debt, and the administration of the trust being confided to European hands, in spite of the difficulties and confusion in which Turkey is constantly plunged, it has been a conspicuous success. It may be further mentioned that a large proportion of the Turkish debt is held in France, and that within a recent period the influence which the Paris *haute finance* exercises upon the French republic has made itself apparent in connection with the attitude of France toward the whole Turkish problem.

The annual report of the council for the administration of the Turkish debt for the year 1895–96, which has just been published, is the subject of extended comments in the London financial papers. The document, like those which have preceded it, furnishes abundant testimony that the natural resources of Turkey are of an extraordinary diversity and magnitude, but, as all investigators in the field conclude, perpetual misrule and the inability of the Turkish governing class to perceive that bad government is the cause of its financial straits, results in nothing being done to render them fully available. In spite of this, however, and of the political and financial crisis in Turkey that began in 1895, there has been no serious falling off in the revenues appropriated to the external debt. In fact, the total gross amount collected for this purpose fell off only $203,000, and a reduction in expenses reduced the decrease in net still more, to about $136,000. Altogether, with the redemption of bonds for the sinking fund and other items, there was available for interest about $9,750,000, and a balance after the service of the debt of $2,700,000 to be devoted to the sinking fund and the redemption of outstanding bonds. It is remarked that during the fourteen years that the council has been in existence $55,000,000 or more, amounting to 10½ per cent. of the whole Turkish indebtedness, has been extinguished in this manner, and it may be further noted that until the present political crisis appeared Turkish bonds enjoyed a position of increasing respectability in the European stock markets. The principal decreases in revenue came under the heads of tobacco tithe, stamps and silk, the causes of which are so obvious as to render their reproduction unnecessary. But we are glad to learn that "the silk harvest of the current year is so good that already the tithe collected considerably surpasses the silk revenue of the whole of 1895–96." In connection with the silk industry very interesting details will be found in this report concerning the imports of raw silk into France, England, the United States and Japan, while the very curious point is noticed that Syria, which should itself be an exporter, actually imports a small amount of silk from China. Turkey, it may be observed, ranks second among European countries as a silk producer, the 1894 production having amounted to 1,031,000 kilos., Italy coming a long way first with 3,449,000 kilos.

One subject of interest treated in the report is the Turkish railways. The following extract from a London exchange bears upon this topic. It says: "The mileage is rapidly increasing, 276 miles having been added in the past year, while the extension of the Smyrna-Cassaba Railway is being carried out with great activity. With regard to certain other projected lines we learn that it is more than probable that their construction will be adjourned for a time. 'This, indeed,' says Sir Vincent, 'is much to be hoped, for the guarantees of the lines already constructed form a heavier charge on the imperial treasury than it can comfortably bear, and for the current year it will probably be $3,297,000.' When security is reëstablished, and the beneficent effects of railway communication have had time to make themselves felt, this charge will no doubt be gradually lightened. But that desirable time is still far off, and Sir Vincent Caillard, of the council of administration, is quoted as hoping that the construction of guaranteed railways has come to an end for the present. His objection, of course, is not to the extension of railways, but to the extension of guarantees, and to the system on which the guarantees are based. 'This system,' he says, 'is conceived in such a manner that the company which ran no trains at all would give the largest dividend to its

shareholders, and I sincerely hope that ere long an arrangement may be come to between the Ottoman government and Ottoman railway companies by which so glaring a paradox may be removed from Ottoman finance.'"

AN EXTRAORDINARY "CORNER."

From time to time the London stock market gives evidence that in point of manipulation of prices, speculative maneuvering, artificial flotation of new enterprises and securities, and all that makes up modern stockjobbery, it has nothing to learn of Wall street. The great advantage which London enjoys in this respect is the possession of an almost unlimited public demand for speculative or investment stocks, and of a great many departments in the market in which to gratify it. Consequently, if one class of securities is neglected the interest and excitement, with the attendant efforts of the promotor and stockjobber, are promptly transferred to another part of the market, illustrations of this being furnished by the rise and fall of successive "crazes" for foreign government obligations, Argentines, breweries and industrial home rails, and, finally, that for Kaffir and Westralian gold-mining ventures.

The mining market, as it has existed in London for the past two or three years, has been of overshadowing importance. It has witnessed a speculation on a wide basis and extremely attractive to the public, not only in Great Britain but throughout all Europe. The public has suffered a good deal without doubt, but, as usual in such cases, a certain amount of denunciation of the methods by which it is accomplished is about all that results from even startling disclosures. It is only when professional factors in the mining market collide that a true light is thrown upon the subject.

Such an instance has lately been afforded by the circumstances connected with the Lady Hampton mine, which has been the object of nine days' wonder in the London market. In fact, the matter was thought worthy of extended paragraphs in the general cable news sent from London to our own daily newspapers.

The Lady Hampton Consolidated Gold Mine, to give it its full title, was brought out last October in the London market as the proprietor of a promising gold claim of eighty acres near Coolgardie, West Australia. The prospectus provided for a capital of £250,000 in £1 shares. Of the shares 150,000 were offered to public subscription. The vendors of the property were another concern known as the Antipodes Exploration Company, Limited, which was to receive £70,000 for the Lady Hampton mine in fully paid shares of the latter, and the balance of £120,000 in shares or cash, at the option of the directors. It need scarcely be remarked that the directory of the Antipodes Company, which included the inevitable British "M. P.," betrayed a close connection between the two companies as to management and controlling factors.

In these respects the Lady Hampton Consolidated Gold Mine did not differ from hundreds of enterprises of a similar character that have been floated in London during the last two years. It seems, however, that operators in the mining market, including one rather prominent jobber, sold Lady Hampton shares prior to the allotment in full confidence of obtaining them through the public subscription. According to the London *Statist* the Antipodes Exploration, Limited, purchased the property subsequently sold to the Lady Hampton for £190,000 in stock or cash for a consideration embracing £5,000 cash (£4,500 of which was to be in deferred payments) and 8,000 of the Antipodes Company's own 10,000 of £1 shares. This disparity in valuations is evident, and it is not surprising that, in view of the facts and the existing depression of the money market, some of the dealers therein should have gone short of Lady Hamptons.

The sequel, however, was startling. Presumably conforming to the prospectus, the promoters of the Lady Hampton allotted virtually all the shares to themselves or their representatives. A settlement for the stock had been fixed by the London Stock Exchange committee for November 25. As that date approached, however, the people who were short of it found that the stock was tied up, and in the "corner" fancy prices, as much as £200 or £300 apiece, were mentioned, if not actually recorded, for the £1 Lady Hampton shares. The matter was brought before the Stock Exchange and the committee promptly postponed the settlement, thereby relieving the dealers caught in the trap from the immediate necessity of meeting their contracts. The principal operator, whose bear operations had placed him in this unfortunate position, was, it seems, indiscreet enough to express his opinions of the Antipodes-Lady Hampton party in no measured terms, and in the litigation and measures for a settlement outside of the Exchange which have followed, it would seem that the publication of a formal apology has been a conspicuous feature. The entire incident is, however, a further revelation of the methods which prevail in the London mining market, and a commentary upon the chances which await the public that has invested so largely in that direction.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

The Washington correspondent of the Philadelphia *Ledger* points out, very properly, that the shortage of the wheat crop in foreign countries which come into competition with the United States as wheat exporters, together with the famine in India, suggests that the Indian corn crop of the country might be economically used to meet the demand for food in India. Exports of wheat to India have already resulted in raising the price of that cereal to the famine-stricken inhabitants, and there is therefore no reason why corn, which is to be had in abundance here, and which is almost equal to wheat in food qualities, should not be utilized by India. The famine in India is due, of course, to the shortage of the wheat crop there, and it is feared the situation will be worse in the spring and summer. Wheat has advanced in price in this country from 55c. to 91c. per bushel, and it is very unlikely the price will be lower next summer. On the other hand, it is more than probable, when the shortages of wheat crops in Russia, India, the United States, Australia and elsewhere are considered, that the quotation for the cereal will be higher next summer than it is now, and possibly for a year later than that. This would mean that India, and possibly Russia, where the crop is short and prospects are unfavorable, might have to pay $1 or $1.10 a bushel for wheat for importation. The corn crop of the United States in 1895 was a very large one, and it is estimated there are more than 400,000,000 bushels of it still on hand, which, with the crop of 1896, furnishes a probable surplus for the current cereal year of perhaps 700,000,000 bushels in excess of what will be needed at home and for the ordinary export demand. The estimate has been made that about 300,000,000 bushels of corn would equal in food-giving qualities the deficiency of 200,000,000 bushels in the world's output of wheat in 1896, from which it is argued that shipments of Indian corn to India would be profitable to the American farmer and advantageous to the consumer from the price point of view.

If certain statements made by the American consul at Bradford, England, are correct—and there seems no reason to doubt the word of Consul Meeker in this respect—American manufacturers are securing a decidedly firm footing in some English markets. This is due, the consul says, to American houses sending over their own travelers to solicit and build up trade direct, instead of sending circulars or placing an agency for their goods with easy-going or conservative English firms. American brass valves are selling in Bradford for $3.60 which British makers have been paid $5 for. It is further pointed out that the carriage by sea and rail from the United States to Bradford is 5 per cent. less than from London, by rail alone, to Bradford. American files are being imported largely, says Consul Meeker. He also says: "Go into any cutlery or hardware shop in Bradford and ask for shears, and you will be handed a pair bearing a Newark or Trenton, N. J., imprint." American shaving soap now "has the call" in spite of the fact that, "judging from the advertisements to be seen on billboards, in railway stations, on the landscape and in the newspapers, one would think England a land overflowing with soap." The largest turbine wheels in use in England were made in Massachusetts. American typesetting machines are in use by the newspapers, and the Bradford *Observer* has just bought a new press made in New Jersey. One Bradford jewelry firm carries 20,000 watches of one American make. American boots and shoes could be sold more readily if the soles were made heavier, to withstand damp. The excellence of American canned goods has enabled them to successfully resist Australian competition. Altogether the actual progress made by American goods at Bradford has been very satisfactory, and the outlook seems far from discouraging.

The 1896 crop of corn, now practically secured, is placed at 2,269,000,000 bushels, according to the December report of the *American Agriculturist.* While this enormous total has been foreshadowed, the paper named says there is disappointment as to the quality of the product. Complaint of failure to ripen and properly dry out is very general, and in some districts "the quality is so poor that loss from heating has followed efforts to crib." While the crop is the largest ever grown, the amount of merchantable corn is said to be less than was produced last year. The average rate of yield is 27.9 bushels of shelled corn per acre on 81,402,000 acres. Testimony points to an increased area sown to winter wheat, but the condition of the plant is uneven. Seed was carefully put in, germination was prompt and even, and while the top growth is smaller than usual at this date. A good many farmers seeded wheat when it became apparent that prices would rule higher, and the condition of this extra seeding is relatively less favorable, due to defective seedbed and haste in getting seed into the ground.

CURRENT BUSINESS NEWS.

Industrial.

The George P. Steel Iron Works of Camden, N. J., which were shut down several days ago, have been leased to F. W. Wright, of New York city, who has resumed operations.

The Continental Match Company has closed a contract with the Keystone Match Company of Camden, N. J., whereby the Keystone Company will begin operating their factory on or about January 1, 1897, turning over its entire output of parlor and sulphur matches to the Continental Company. This means an increase in the output of the Continental Company of about two carloads per day.

The United Window Glass factory at Orestes, Ind., resumed operations last Saturday, furnishing employment to 500 hands. It has been idle six months.

The two hundred window glass workers at Elmira Heights, N. Y., were to resume work this week, after an idleness of several months.

C. H. Over & Co. and Maring Hart & Co., window glass manufacturers, of Muncie, Ind., employing nearly 1,000 men, have resumed work after six months' idleness.

All of the laborers employed on the Champlain Canal improvement between Fort Edward and Fort Ann have struck for an increase in wages from 12½c. to 15c. per hour.

The sinking fund commission of Louisville, Ky., sold to a Boston house $127,000 of 5 per cent. city bonds, maturing in 1900, for 103⅛.

The Oliver Mining Company, of which the Carnegie Steel Company and the Oliver Iron & Steel Company are the principal stockholders, "has secured a fifty-year lease of the Mountain Iron Mine on the Mesaba range, which practically means that the Pittsburgh firm has bought the property. This was a Rockefeller mine. The capacity of the mine is said to be about 500,000 tons annually. The terms of the deal are not made public. The Oliver Mining Company also operates the Big Oliver mine on the Mesaba range, which, during the season just closed, shipped about 800,000 tons of ore."

J. H. Kibbey, ex-chief justice of Arizona, read a paper before the National Irrigation Congress at Phœnix, on Wednesday, taking strong ground against either state or national legislation in favor of arid lands, believing it would be detrimental to arid regions. This view brought forth much adverse criticism.

The Philadelphia *Press* says: "The great deal between the Rockefellers and Mr. Carnegie promises far-reaching results to the iron and steel industries of this country and to the world. In the opinion of some men in the trade, this country is now in shape to take that position in the world's markets which unrivaled natural advantages and the development of our transportation system and our industries warrant. The acquisition by Mr. Carnegie of the mountain iron and other ore mines of the Mesaba range will make the Pittsburgh district a more important iron and steel producing center than heretofore, and, with the new transportation facilities on the lake and by rail already developed, will promote the manufacture of iron and steel at a lower figure than has heretofore been possible. The Rockefellers will transport the ore over the lakes to a point reached by Mr. Carnegie's Pittsburgh or Bessemer & Lake Erie Railroad, which runs to his furnaces and mills. It is said the ore at the mines acquired by Mr. Carnegie can be put in cars at a cost of 10c. per ton, but it is likely that the cost is not over 8c."

The sales commissioner of the Bessemer Steel Association has sent out notices for a meeting of the pool in New York Monday, when an effort will be made to reorganize the association. "It is said the meeting has been requested by the small manufacturers of billets, who, after the market had been thrown open last week, found they were unable to compete with the large concerns."

The Federation of Labor has determined to make an effort to organize stationary engineers and other crafts.

The 500 miners at Wainwright, Ohio, after a strike of several months, have accepted 51c. a ton, the terms offered by the Midvale Goshen Company.

Commercial.

The Commercial Travelers' Fair was formally opened under the auspices of the Commercial Travelers' Home Association of America in Madison Square Garden, New York city, Tuesday evening. Its purpose is to secure $150,000 with which to build a home at Binghamton, N. Y., for indigent and homeless commercial travelers. The fair will continue until December 26.

The Illinois Central is said to be negotiating with several of the Atlantic steamship companies with a view to getting them to establish a regular service between New Orleans and European ports. "With the object of bringing the steamship companies around to its side the Illinois Central has offered them very advantageous rates from all parts of the Mississippi valley, and is laboring to show them that in a very short time a trade may be built up between New Orleans and Europe that will be highly remunerative to all concerned."

The anthracite coal trade is reported in a rather less favorable condition. The supply of coal is so heavy as to affect prices.

A "Deep Water Convention," composed of delegates from Missouri, Kansas, Arkansas, Indian Territory, Oklahoma and Texas, met at Fort Smith this week.

Making full allowance for European stocks in the non-returning ports, Beerbohm says "the total of wheat and flour in first hands December 1 does not exceed 1,450,000 quarters, whereas, under the ordinary conditions of supply and demand, the total might have been expected to reach 1,800,000 quarters."

At the National Convention of the American Federation of Labor in Cincinnati this week, a paper favoring enforced arbitration was read by Edward A. Clark, representative of the five great railroad brotherhoods. Addresses were made by Samuel Woods and Mr. Manlinson, the British delegates. Resolutions of sympathy with Cuba, and calling on the President and Congress to recognize Cuban belligerency, were adopted.

The *American Agriculturist* says: "At a recent sale of American horses at Glasgow, carriage animals sold as high as $185 each, express $110, fair drivers $100 and trotters up to $260. These were from Indiana and Chicago. A consignment of Kentucky horses, with speed, sold at an average of $400 each, all at private sale; one to match up a team brought $800. Another consignment of over seventy head sold at an average of $300, some of these being taken for government use."

It is reported to the *Northeastern Lumberman* that an American paper mill has been established in the vicinity of London, England. "One thing is certain, that the old-time paper mills of Great Britain will be obliged to use larger proportions of wood pulp, either mechanical or sulphite, or else they will have to take a back seat in furnishing the increasing demand for low cost papers among the English publishers."

Secretaries of the leading lumbermen's associations of the United States have been in conference at Chicago this week to formulate a constitution and by-laws for the government of their associations.

A representative in New York of a large firm of agricultural machinery manufacturers has received an order for three carloads of implements to be shipped to Australia. "The firm referred to state that they have shipped more agricultural machinery to Australasia this year than they have during the two previous years, 1894 and 1895."

A complete vessel was shipped from New York to South America last week boxed in a number of separate pieces for transit. "The vessel is a side-wheel steamer, destined for use on the Magdalena river in Colombia. She was built at Lewis Nixon's shipyard, Elizabeth, N. J., and has a length of 100 feet; beam, 22 feet, and depth, 7 feet, with a carrying capacity of 100 tons on a three-foot draft."

Reports show that there has been a distinct increase in business on the Erie Canal over last year. From the Albany end 150 more boats cleared than last year, a total of 2,198 clearances being made, and 489,121 tons of merchandise bound for tidewater passed through the Albany end, as against 460,000 last year. The value of merchandise bound to tidewater was $9,204,937, as against $9,178,800 last year. From Buffalo there were 5,876 boats cleared, as against 4,546 last year, an increase of 1,336 from the Buffalo end. The shipment of flour and grain was double that of last year, and there was a large increase in smaller freight.

The dissolution of the steel billet pool on prices has resulted in a heavy drop in the steel market. From the pool price of $20.25 a ton at Pittsburgh, billets have fallen to $16@$17 a ton.

The Connellsville (Pa.) *Courier* says that the formation of a pool of shippers of bituminous coal to the lakes is interesting operators in Pennsylvania, Ohio, Indiana and West Virginia, and seems in a fair way to go through.

Lumbermen from all over the United States met at Cincinnati this week for the convention, which was called to order by the editor of the *Timbermen*. Twenty-one states were represented with 150 delegates. Special representatives were in attendance from all the prominent lumber organizations throughout the country. Resolutions were adopted asking Congress to place lumber on the dutiable list; requesting lumber dealers to furnish to senators and representatives full information in relation to the needs and condition of the lumber industry, and invoking the aid of Congress in establishing reciprocity with southern countries.

Financial.

These securities, among others, were sold at auction this week in New York:

5	Shares First Nat. Bank of Key West, Florida	$100 lot

The Union Ferry Company has declared a quarterly dividend of 1 per cent., payable January 2.

A Boston dispatch says that it is probable that six or eight of the banks of that city will go into liquidation, and that one large institution will be established in their stead.

In the first annual convention of the Pennsylvania Bankers' Association this week resolutions were adopted approving of the recommendations of Comptroller Eckels for a reform of the currency, and also proposing certain changes in the existing law governing bank circulation.

The Boston, Revere Beach & Lynn Railroad Company has declared a semi-annual dividend of 1 per cent., payable January 1 to stockholders of record December 15.

The American Bell Telephone Company has declared a regular quarterly dividend of 3 per cent. and 1½ per cent. extra. Dividends are payable January 15, 1897, to stockholders of record December 31, 1896.

The Procter & Gamble Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable January 15.

The Edison Electric Illuminating Company of Brooklyn has declared a quarterly dividend of 1½ per cent., payable January 15.

Railroads.

The receivers of the Central Railroad & Banking Company of Georgia have been discharged by the United States Circuit Court.

Judge Wallace, of the United States Circuit Court, has denied the application of the Ogdensburg & Lake Champlain Railroad Company bondholders for the appointment of new receivers.

The Calumet & Blue Island Railway and the Chicago, Lake Shore & Eastern Railway, both owned by the Illinois Steel Company, will be consolidated under a new name at the meeting of the officials February 17, 1897.

The annual report of the trustees of the New York and Brooklyn Bridge shows that the receipts for the year ended December 1 were $1,201,758; receipts from all sources were $1,404,318; balance on hand from last report, $307,742; total receipts from all sources to November 30, $1,712,061; expenditures amounted to $1,640,490, leaving a balance of $71,570.

It is reported that the officials of the Bangor & Aroostook Railroad Company have perfected arrangements with the Maine Central and the Boston & Maine railroad companies and other lines for lower freight rates so as to be able to ship Aroostook products to New York at a profit.

The live stock business of the transmissouri railroads shows an increase as compared with this time last year. During the first week of December the Atchison moved into the Kansas City stock yards 1,053 cars against 888 last year. The Rock Island hauled in the same time to those yards 440 cars against 345 last year. The Missouri Pacific hauled 541 cars against 435, and the Missouri, Kansas & Texas 346 cars against 163 last year.

At the annual meeting of the stockholders of the Georgia & Alabama Railway Company, held in Augusta, Ga., resolutions were unanimously adopted under which the consolidation of the Columbus & Southern Railroad and Georgia & Alabama Railway was effected.

Mr. John K. Cowen has been reëlected president of the Baltimore & Ohio Railroad Company.

The following October gross and net earnings are reported:

Foreign.

According to a recent cable dispatch, the Melbourne *Leader* estimates the wheat crop in Victoria at only 6,750,000 bushels, thus indicating that 500,000 bushels must be imported to cover home requirements. Last year's crop is now said to have only reached a total of 5,669,000 bushels. Another cable says that the Australasian colonies, as a whole, will have to import about 475,000 quarters of American wheat in the ensuing year; already about 100,000 quarters of California wheat has been bought for shipment.

The Paris *Temps* says that an international conference will be held in this city in March to discuss proposals having in view the abolishing of the system by which consumers bear the burden of the bounties granted to sugar manufacturers.

The Newfoundland government announces that it is about to purchase the rights of the Newfoundland Railway Company and to amalgamate all the railways in the island under government control.

Reports show the spread of destitution at White Bay, in the northern portion of Newfoundland, Urgent demands are made upon the government to provide relief. On her last trip the mail steamer tried to reach there, but was unable to do so owing to the ice blockade. She had to land the provisions at a place twenty-five miles south of the station intended. The government will probably send an additional supply of provisions on the next trip of the steamer, as that will be the last chance to reach the unfortunates until spring.

Since 1871 Germany's merchant marine has increased from 982,000 tons to 1,550,000 tons, or over 58 per cent. Of course the number of vessels is smaller, as the increase is all in large steamers. The aggregate tonnage of sailing vessels was 239,000 tons less in 1895 than it was in 1871, but the increase in steam vessels was from 1,043 tons to 893,000 tons.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Tax—Payment—Breweries—Receiver.

The Supreme Court of Louisiana held, in the recent case of The Metropolitan Bank vs. New Orleans Brewing Association, that where several breweries are in the hands of a receiver, and the amount of business of each brewery is estimated, and upon the aggregate the license tax demanded by the state is paid to the tax collector, where the general business of the receiver is conducted, this is a sufficient payment, and the tax collector cannot, after such payment, sue for the tax due by each brewery.

Note—Mortgage—Sureties—Lien.

The Kentucky Court of Appeals held, in the recent case of Moore vs. Thompson, that where the principal in a negotiable note executed a mortgage to indemnify his sureties, and the note was renewed and the renewals discounted from time to time, the mortgage continued in force to secure the last renewal, although the name of the principal was omitted from the renewals and there was a change as to one of the sureties, and, therefore, the mortgage lien was superior to the lien of an attaching creditor of the principal.

Interstate Commerce—Liquor—Sales.

Judge Grosscup, of the United States Circuit Court at Chicago, recently, in the case of one Lebold, held unconstitutional, in so far as it applied to solicitors of foreign liquor houses, the ordinance of the city of Chicago taxing wholesale liquor dealers $150 a year. The judge held that while the city police powers might interfere in interstate commerce matters where the public health or morals were at stake, the case was one wherein Lebold represented the California Wine Association in soliciting local orders; he was not a local dealer, and his acts were not alleged to be harmful to the public health or morals.

Creditor—Security—Attachment.

The Supreme Court of Georgia held, in the recent case of Marshall vs. Hodgkins et al., that where a creditor whose debt was secured by a conveyance of land under section 1869 of the Georgia code, obtained judgment, reconveyed the land to the debtor, and subsequently acquiesced in a sale of the land under an execution in favor of another creditor, and claimed the proceeds of such sale in the sheriff's hands, the lien of the secured creditor attached to the proceeds, and the purchaser at the sheriff's sale acquired an unincumbered title; that in a contest for such proceeds, arising upon a rule against the sheriff, the lien of the secured creditor would prevail over judgments rendered or liens created in favor of other creditors after the making of the security deed.

Corporation—Assignment—Stockholders.

The Supreme Court of Minnesota held, in the recent case of The Sturtevant Larrabee Company vs. Mast, Buford & Burwell Company et al., that where the assets of a corporation, not a moneyed corporation, have been sequestered by an assignment under the insolvency law, an action may be maintained by a simple contract creditor on behalf of himself and all other creditors, under chapter 76 of the Minnesota General Statutes of 1894, to enforce the constitutional liability of the stockholders of the corporation, and that a cause of action under the third subdivision of section 2600 of the Minnesota General Statutes of 1894, against the officers of the corporation for their fraud, unfaithfulness or dishonesty, resulting in loss to the particular creditor, cannot properly be joined with a cause of action to enforce such constitutional liability of the stockholders; for this reason both the proposed amended complaint and the proposed cross bill were demurrable for misjoinder of causes of action, and the court below properly refused to allow either to be filed or served.

Railway—Passenger—Negligence.

The Kentucky Court of Appeals held, in the recent case of The Chesapeake & Ohio Railway Company vs. Lang's Adm'r, that a passenger on a crowded excursion train was not guilty of contributory negligence in standing on the platform, there being only standing room inside the cars; that therefore there might be a recovery for his death resulting from a collision caused by the negligence of the railroad company, although he might not have been killed if he had been inside the car, and that in an action to recover for the death of a person caused by the negligence of another, the measure of damages is the power of the deceased to earn money, and it is proper to tell the jury that they may consider the age of the deceased, his capacity to earn money and the probable duration of his life, without any other specific instructions on the subject, and that the court in this case properly refused to instruct the jury that the measure of recovery was the probable net earnings of the deceased, to be ascertained by deducting from the gross amount the cost of his living.

Fixtures—Mortgage—Machinery.

In the case of Shepard vs. Blossom et al., recently decided by the Supreme Court of Minnesota, it appears that a mortgagor constructed a series of buildings and placed certain machinery in the same with the intent and purpose of making all of the same a manufacturing plant, and used the same as such. The trial court found that, as between him and the mortgagee, all of this machinery was a part of the realty. Upon review the Supreme Court held that the mere placing of the machinery in position in the buildings with intent to make it a permanent part of the manufacturing plant did not make it a part of the realty unless it was actually or constructively attached to the building or land; that the machines bolted to the floors or posts of the buildings, either with bolts or "leg screws," those which were blocked to the floor, that which was held by a counter shaft, those which were braced in the building, and the two ponderous machines weighing respectively three and a half and four tons, resting on the floor by their own weight, were sufficiently attached to the building for the court below to be justified in finding that they were a part of the realty, and that as to the other machines which did not appear to be heavy or ponderous, and which were in no manner attached to the building except by the bolts connecting them with the pulleys on the shafting when in operation, the court was not justified in finding that these are a part of the realty.

Maximum Rates—Turnpike Company.

In the case of The Irvington & Lexington Turnpike Road Company et al. vs. Sandford et al., the United States Supreme Court at Washington has reversed the judgment of the Kentucky Court of Appeals in the case brought under the act of the Kentucky legislature of 1890, fixing a maximum schedule of rates to be charged by the Covington & Lexington Turnpike Company of that state. The corporation fought the law on the grounds that it impaired the contract between the company and the state in its charter of 1834; that the reduction of tolls prescribed by the act was so serious as to amount in law to a practical deprivation of its property without due process of law, and that the act was a practical denial of the equal protection of the law, all of which, it was claimed, was in violation of the terms of the federal Constitution. The state courts sustained the validity of the legislation, and from the judgment of the state court of last resort to that effect the company appealed. The law was held not to be invalid because of any impairment of contract, nor for a denial of the equal protection of the laws; but because the courts below refused to permit the turnpike company to go into the question of the reasonableness of the rates named in the act, the Supreme Court of the United States reversed the judgment of the Court of Appeals of Kentucky and remanded the case.

Corporation—Stockholders—Creditors.

The Supreme Court of Georgia held, in the recent case of Conn et al. vs. Jones, that where at a meeting of certain persons who were stockholders of a corporation, a resolution which contained an agreement upon the part of certain of these persons to the effect that if the directors would proceed to sell out the assets and wind up the affairs of the corporation as soon as practicable, they would indemnify the directors (to the extent of a given amount upon each share of stock held by such person) against loss in consequence of a personal obligation previously assumed upon the part of the directors to pay certain of the debts of the corporation, and where such directors, having discharged such debts of the corporation, thereafter brought suit against one of such persons upon account of the liability alleged to have been incurred by him in consequence of his having assented to and voted for such resolution, it was a good reply to such a suit that the directors had not complied with the condition imposed, and had not, in fact, proceeded as soon as practicable to sell out and wind up the affairs of the corporation; and it was not a good reply to such a plea that a certain creditor of the corporation had been enjoined by it from selling such assets under a power of sale contained in a deed from the corporation to that creditor, there being no contention by the directors that their failure to comply with the condition stated was due to any want of authority in them to make the sale, or that the defendant did anything to prevent their taking such action.

BUSINESS NOTES.

Government Crop Report.

The government crop report for November gives the farm price of wheat and other leading crops this year and a comparison with other years as follows:

	1896.	1895.	1894.	1893.	1892.	1891.
Wheat	72.7	53.2	49.8	52.1	63.2	85.3
Corn	21.4	26.7	45.6	37.0	39.3	42.2
Oats	18.5	30.5	32.9	28.8	31.6	32.2
Potatoes	23.7	28.8	55.5	60.0	67.3	37.1
Cotton	6.6	7.59	4.9	6.99	8.4	7.3
Rye	40.3	43.7	50.5	51.8	64.8	77.4
Barley	32.2	33.4	44.3	40.6	47.2	54.0
Tobacco	6.0	6.6	6.7	7.2	....	7.5
Hay	$6.54	$9.38	$8.35	$9.18	$8.49	$8.39

Austrian Millennial Exhibition.

The Millennial Exhibition at Budapest was closed November 3. Some portions of the exhibition are to be preserved. The objects exhibited in the Ethnographical Exhibition will serve as the nucleus for an ethnographical museum. The collection of machines in the special exhibition of the means of transport will form a novel institution—namely, a railway museum. The bulk of the exhibits in the agricultural section will be used for the foundation of an agricultural museum. Other portions of the Millennial Exhibition are likewise to be kept for similar purposes.

Commercial Competition With England.

The *British Trade Journal* says: "Belgium and Germany have lost their hold of the English market in girders. Time was when scarcely anything but Belgian girders could be met with in the work of British house-building. Now, the very contrary is the case. In the store of an iron merchant, who has never less than one thousand tons in stock, we could not find a foreign made girder the other day. He told us that the English makers had successfully recovered the trade. Steel girders are now more in request, and this has favored the home makers, who are experiencing a constantly increasing business in girders, joists, etc., for building purposes as well as for cast-iron columns."

San Salvador Railways.

Recent advices from Salvador announce the completion of the work of extending the railway line from the port of Acajutla to Santa Ana, the commercial metropolis of the country. Until recently the road reached only as far as Ateos. "The work of extension was begun in 1892 by Mr. A. J. Sherzer, under a contract with the government, and the occasion of its completion and public inauguration was celebrated with much official ceremony. The gauge of the line is three feet and is equipped with steel rail of 54½ pounds. It is understood that the work of constructing the branch line to San Salvador, the national capital, has been undertaken by Mr. Sherzer, to be completed by next June."

"American Car Trains in England."

The London *Times* says: "The Southeastern Railway Company have become the pioneers in introducing to this country railway cars on the American open vestibule principle for first, second and third-class passengers, and the first of these trains began running on Tuesday. It is a singularly fine specimen of English workmanship, and the handsomest train yet offered to all classes of travelers on an English railway. It is attached to the company's service between London, Hastings and St. Leonards, and is shortly to be followed by a similar train for the company's continental services via Folkestone and Dover. The Hastings and St. Leonards train has cost about £12,000. Each car weighs twenty-four tons. The cars are about fifty feet long, and access from one to the other is obtained by means of flexible vestibule connections. Smoking compartments are provided for the three classes, and each car has its own lighting, heating and lavatory arrangements. The decorations are bright and in good taste, and the cars are lofty, warm and well ventilated."

American Cycles in England.

The *India Rubber World* says: "The first great English cycle show of the season—the Stanley—is over, having been the greatest exhibition of bicycles and 'components' witnessed in Agricultural Hall during the twenty years since the first of the series was held. One special particular in which the record was broken was the conspicuous position of the American bicycle. Several of our leading makers had booths so prominently situated and so attractively gotten up as to compel attention. They exhibited their 'smartest' looking machines by the dozen and the score; they had wide-awake representatives ready to explain everything, and the catalogues distributed liberally were handsomer specimens of printing art than Englishmen have been accustomed to see in connection with the bicycle trade. Besides, the English cycling press has given no small amount of space to the American displays, for all of which reasons it can hardly be denied that the American bicycle is making an impression abroad. More than all, there are the custom house returns, showing our exports this year of about $2,500,000 worth of bicycles, the larger share of which has gone to Great Britain, and it must be remembered that in such cases the wholesale and not the retail prices are given."

Acetylene and Gas Engines.

The *Journal fur Gasbeleuchtung* recently gave an analysis of the cost of acetylene by Herr A. von Ihering, of the Royal Technical High School at Aix-la-Chapelle. As to the cost of acetylene power, the conclusion is reached, basing calculations upon the price and quality of calcium carbide as furnished by the Neuhausen Company, that it would at least amount to 8¼d. per indicated horse-power per hour. As gas engines ordinarily develop a like power from gas at 4s., say, for ¾d., it is plain that there is no chance at present of competition from acetylene. The same writer demonstrates that a horse-power hour can be developed on 10.6 cubic feet of gas as easily as on 28.2 cubic feet of ordinary gas.

Anthracite Coal Output.

A New York dispatch to the Philadelphia *Ledger* says: "As a result of the accumulation of anthracite coal at tidewater and at storage points there have, it is said, been some concessions in price. One or two companies, which bring large amounts of coal to tidewater, have offered coal at reduced prices in order to empty cars. A part of the coal thus offered was what is known as stock coal, which always brings less than fresh coal. The production of coal for the eleven months ending December 31, which covers the period in which the commision has been in existence, will be a little under 40,000,000 tons, against 42,700,000 tons in the corresponding period of 1895. A point that is not generally known is that in the production this year there have been counted supply and washery coal and culm, where these kinds have been actually shipped and used. This has never before been done. Productions of all kinds for the entire year will be approximately 43,300,000 tons, against 46,000,000 tons last year. This year the companies have made a good profit, whereas last year they say they made nothing."

Rivers To Be Stocked With Salmon.

The *Shipping and Commercial List* says: "Under the direction of Fish Commissioner Brice a large number of Pacific coast salmon are to be planted in eastern waters. A fish car containing 5,000,000 eggs is now on the way east, and the eggs will be planted in the Kennebec, Penobscot, Merrimac, Hudson, Delaware and Susquehanna rivers. Already 8,000 yearlings have been turned loose in the Penobscot and the tributaries. The commission is gratified with the result of its work on the Pacific coast this year. More than 37,000,000 eggs have been hatched, three times as many as were hatched in any previous year. Of these 26,000,000 were hatched at the new station at Battle creek, a tributary of the Sacramento river in California. The commissioner secured a site which belonged to the California commission, and since has built an additional hatchery at the same place. It is now regarded as one of the best stations in the United States. Not the least important action of the Fish Commission is the transfer of the steel head trout from the Pacific to the Atlantic coast, where a large number have been planted."

Distress in India.

The *Calcutta Englishman* of November 25 contends that the home officials are utterly at fault in regard to the dimensions of the famine. It adds that practically every province is involved, and asserts that such errors at the outset may result in irretrievable distress and suffering before the crisis is over. The *Mark Lane Express*, in its crop report, says that the rather heavy rainfall of December will give the November sown grain a hopeful start. It adds: "The India rains are too light to allow of anything like the average area of sown wheat for 1897," and that new wheat is now being reaped in the warmer provinces of Argentina, and argues that it learns that 300,000 to 400,000 quarters of wheat may be expected from Montevideo. * * * "The dependence of Great Britain on imported produce is now so heavy that the natural facts of the position are bound to tell ere long, the facts being that the total production of the world in 1896 is barely equal to the total requirements, and the reserves, though considerable, are being steadily worked." In conclusion, the *Express* predicts that a recovery of prices is probable with a week of anything like seasonable winter weather.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Wholesale trade continues of smaller volume than expected, practically the only activity in wholesale lines being in groceries, candies, fruits and nuts. The weather has interfered with seasonable business, which at many centers is smaller than in preceding years, in that a larger proportion of purchases are of a cheap grade of goods. There is a decrease in demand at Atlanta and Seattle, but at Nashville, Sioux Falls, Savannah and Jacksonville jobbing lines announce an increase in demand. At almost all other points general trade remains quiet and unchanged, with retailers of holiday goods experiencing the only activity.

The downward tendency of prices pointed out a fortnight ago is continued. This includes quotations for hides, which caused boot and shoe jobbers to restrict purchases, anticipating cuts in prices for shoes; steel rails, with a drop of $3 a ton, owing to the dissolution of the pool; steel billets, with a drop of $3.25 on the failure of the combination, and Bessemer pig iron, owing to the general tendency of iron and steel. Cotton, too, is lower on confidence in a larger crop than expected; print cloths, as product of that staple, and because of the large stock of the same; anthracite coal, Indian corn, oats and petroleum. Steady or practically unchanged quotations are reported for pork, lard, coffee and sugar. Wheat and rosin are higher.

The dry goods market is quiet for seasonable fabrics, jobbers reporting only a small reorder trade. Woolen mills report a moderate quantity of orders. At the south the decline in the price of raw cotton may affect country merchants who are still carrying that staple. An increased wheat acreage is reported from California.

Total bank clearings for the week have not changed materially, increasing only about 2 per cent. compared with last week. When contrasted with the corresponding period last year this week's total shows a falling off of 9 per cent., but an increase of 6 per cent. as compared with the like week in 1894, and of 13 per cent. with the like period in 1893. The largest bank clearings' totals on record is that for the third week of December, 1892—$1,512.000,000—compared with which this week's total shows a falling off of nearly 30 per cent.

There are 359 business failures reported throughout the United States this week, 22 fewer than last week and 26 less than in the corresponding week one year ago. As compared with the like week in 1894 this week's total shows a gain of 50, and with the corresponding week in 1893 the gain is 6. In the third week of December, 1892, there were 61 fewer failures than this week.

Stock values are depressed and the market is very unsettled on the action of the Senate Foreign Affairs Committee, which, on Friday, decided to report to the Senate a joint resolution recognizing the independence of Cuba. Prior to that the stock market was inclined to recover ground on the approaching recess of Congress for the holidays and on covering of speculative short contracts. Foreign exchange is very firm, in sympathy with the strength of the money markets in London and Berlin. Demand sterling is 4.87½ and reichsmarks are up to the gold-shipping point, and some gold is expected to go to Germany next week.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 3,524,826 bushels, as compared with 4,222,000 bushels last week, 2,056,000 bushels in the corresponding week one year ago, 3,554,000 bushels in the week two years ago, 2,605,000 bushels three years ago, and as contrasted with 4,247,000 bushels in the like week of 1892. Exports of Indian corn from both coasts continue heavy, aggregating 2,814,150 bushels, as compared with 3,541,000 bushels last week, 2,057,000 bushels in the week a year ago, and an average of about 600,000 bushels each in corresponding weeks in three preceding years.

Mild weather and bad roads have restricted trade in the Province of Quebec and at Montreal, although colder weather for a time stimulated demand. The volume of Christmas trade is an average of that in previous years. More activity is reported in both wholesale and retail lines at Toronto, particularly in dry goods, groceries and hardware. Better weather has helped business at Halifax, and more activity is reported even in wholesale lines. The Cape Breton mackerel fisheries are said to be a complete failure, and destitution exists among Newfoundland fishermen in the northern and other remote parts of that colony. Total bank clearings at Winnipeg, Toronto, Montreal, Hamilton and Halifax amount to $22,861,000 this week, compared with $24,882,000 last week, and with $23,204,000 in the week one year ago. There are 39 business failures reported from Canada this week, compared with 42 last week and 42 in the week a year ago.

FINANCIAL.

The Money Market.

There is very little to record about the condition or tendencies of the New York loan market this week. Its position and characteristics are, in fact, practically unchanged. The bank statement issued by the Clearing House Association last Saturday showed a smaller inflow of legal tenders than had been expected, but the fact did not have any apparent effect. Some good names are offering in the market for mercantile paper, but they are readily taken, and the buying demand is still superior to the supply. Rates are quoted on the basis of 3½@4 per cent. for best names and doubles. In time money there is some little inquiry for the renewal of expiring arrangements, but borrowers are disposed to insist on easy terms, and the slight increase in activity makes little impression on the volume of funds available for such purposes. The quoted figures are 3@3½ per cent. for short and 3½@4 per cent. for long dates. Call money remains 1½@2 per cent., and inquiry from bankers for such accommodations against bills of exchange, though not on such a large scale as for several weeks past, has still been the feature.

The New York Banks.

The increases in the reserve holdings shown by the bank statement of last Saturday were not on so large a scale as for some weeks past, the gain in specie being $971,000 and that in legal tenders $1,810,000, making the total increase in reserves $2,781,000. It would seem from these figures, particularly the legal tenders, that the inflow of money from interior institutions to New York has fallen off to some extent. The only other features of the statement which call for comment were the gains of over $11,000,000 in loans and of $14,500,000 in the average deposits. The former change reflects the continued borrowing by foreign bankers upon sterling exchange, while the deposits were naturally increased in proportion with the combined gains in loans and reserves. As a result of the other changes the surplus reserve decreased $858,000, the figures of the statement comparing as follows with those of the preceding week:

	Dec. 5, '96.	Dec. 12, '96.	Changes.
Loans	$472,441,800	$483,503,500	Inc. $11,061,700
Specie	75,676,900	76,648,100	Inc. 971,200
Legal tenders	82,299,000	84,109,500	Inc. 1,810,500
Deposits	502,046,000	516,605,000	Inc. 14,559,000
Circulation	19,997,700	19,841,300	Dec. 156,400
Total reserve	157,975,900	160,757,600	Inc. 2,781,700
Reserve required	125,511,500	129,151,250	Inc. 3,639,750
Surplus reserve	32,464,400	31,606,350	Dec. 858,050

At the corresponding period last year the surplus reserve was $18,391,325, against $33,345,825 in 1894.

The Boston Banks.

	Dec. 12, '96.	Dec. 5, '96.	Changes.
Loans	$163,877,000	$162,463,000	Inc. $1,414,000
Circulation	10,061,000	9,979,000	Inc. 82,000
Deposits	108,690,000	109,359,000	Dec. 1,269,000
Due from reserve agts	26,603,000	25,678,000	Inc. 927,000
Legal tenders	7,972,000	7,273,000	Inc. 699,000
Specie	9,843,000	9,676,000	Inc. 167,000
Surplus reserve	3,570,571	3,139,086	Inc. 431,485

Foreign Exchange.

The exchange market has been dull but very strong, and a further advance, particularly in continental bills, has made gold shipments a possibility for next week. The strength of the London and Berlin money markets is a factor in the case, not only restricting the ability of bankers to draw, but increasing their disposition to take advantage of the radical difference in rates for money here as compared with those prevalent abroad. The purchasing of long bills to be carried in loans at easy rates continues, while the advancing tendency in rates was increased by a falling off in supply of commercials. Posted figures, which were 4.84½@4.87½ at the beginning of the week, were advanced on Monday ½c. for sight—to 4.84½@4.88—and remained at those figures till Friday, when the nominal figure for sight bills was advanced to 4.88½. Meantime, in spite of its dullness, the rates for demand sterling tended steadily upwards, and advanced from 4.86½@4.86¾ to 4.87½@4.87¾ by Thursday. The market for continental exchanges was similarly affected, reichmarks being up to 95¾ on Thursday, which rate, under existing circumstances, was considered the point at which gold could be shipped from here to Berlin in connection with exchange operations in the London market. Reports that specie would go to Germany found circulation as early as Wednesday, but though bankers expressed the opinion that some gold might be taken out by the German steamer sailing on next Tuesday, it was also the opinion that the limited character of the market prevented any large amounts from going. It was also understood that some sales of long sterling held in loans have occurred, and that contracts against some of it have been made for delivery in January on the basis of 4.87. On Friday the market was firm on a further advance of money in London and the unsettled feeling created by the latest developments in the Cuban question.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Dec. 12.	Dec. 14.	Dec. 15.	Dec. 16.	Dec. 17.	Dec. 18.
4.84½@4.87½	4.84½@4.88	4.84½@4.88	4.84½@4.88	4.84½@4.88	4.84½@4.88½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86½@4.86¾	4.86¾@4.87	4.87@4.87¼	4.87¼@4.87½	4.87½@4.87¾	4.87½@4.87¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83½@4.83¾	4.83½@4.83¾	4.83½@4.83¾	4.83½@4.83¾	4.83¾@4.83¾	4.83¾@4.84

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.87¾@4.88; commercial bills, 4.82½@4.82¾; francs, 5.19⅜@5.17½; reichsmarks, 95 1/16@95¾.

In spite of the decided hardening tendency of the open market for money in London and the belief that rates there will be higher before January 1, the Bank of England minimum figure for discounts was left unchanged at 4 per cent. on Thursday. The bank during the week lost £464,000 in specie, and its proportion of reserves fell from 54.09 per cent. to 52.87 per cent. The feature of the decrease in specie was that £300,000 of it is understood to have been sent to Japan. The London open market has been sensitive and higher, discounts, which at the opening of the week were 3⅛ per cent., being quoted at 3⅝@3¾ per cent., call money advancing from 3¾@3 per cent. to 3@3½ per cent. Great firmness continues to prevail at Berlin, where the bank rate for discounts is 5 per cent. and the market figures 4⅞ per cent. Anticipated demands from Russia are the apparent cause for the symptoms of comparative stringency in the German markets.

Imports and exports of the United States for the month and eleven months ending November, 1895 and 1896 (preliminary figures for 1896, corrected to December 14, 1896):

November. MERCHANDISE.	1895.	1896.

Excess of imports	1,020,082	1,190,101
Eleven months ending November.		
Coin and bullion—Exports	48,673,616	56,209,791
Imports	10,402,518	11,224,776
Excess of exports	38,271,098	44,985,015
In ore—Exports	272,120	892,120
Imports	11,399,855	16,069,271
Excess of imports	11,127,735	15,177,151

The following table shows the imports (exclusive of specie) at the port of New York for the week ending December 11, 1896:

	1896.	1895.
Dry goods	$1,668,639	$2,543,520
General merchandise	6,848,743	5,880,210
Totals for the week	$8,517,412	$8,423,730
Previously reported	423,165,843	491,510,615
Since January 1	$431,683,255	$499,934,345

The exports (exclusive of specie) from New York to foreign ports for the week ending December 15 were $217,031 below those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$8,399,140	$9,141,539
Previously reported	365,683,748	327,763,002
Since January 1	$374,082,888	$336,904,541

Silver.

The silver market throughout the week was almost stationary. There were virtually no fluctuations in the quotations either here or in London, and the absence of developments in connection with the Indian government's finances have been adverse to silver prices. India exchange fell sharply on larger offerings of Council bills this week. The India treasury is to sell 20,000,000 rupees in exchange against a new issue of rupee paper.

SILVER PRICES.

THE STOCK MARKETS.

The New York Stock Market.

Shortly after noon on Friday the market received a shock from the announcement that the Senate Foreign Relations Committee had decided to report with favorable recommendation Senator Cameron's resolution recognizing the independence of Cuba. Heavy liquidation and marked declines ensued, the market being apparently without support, save from the buying to cover shorts. The violence of the break and the attendant circumstances recall the Venezuela episode of last December, and it would seem that the "street" was to some extent influenced by the memories of that occasion, and were thus, possibly, disposed to exaggerate the danger of the situation, either as regards its political consequences or its effect on prices, either here or in London.

Up to the moment that this development appeared sentiment was apparently changing for the better, and prices toward the close of the week displayed more or less improvement, mainly on covering by the short interest. Information from Washington seemed to minimize the chances of anything being done there in the Cuban matter prior to the recess of Congress. Indeed, the fact that that body will suspend its sessions on next Tuesday for an entire fortnight, coupled with additional indications that no important legislation can be carried through at the short session, was received in Wall street with evident signs of relief. Large speculative interests, particularly those which receive their inspiration from Washington, undoubtedly took advantage of the depressed state of the market early in the week and covered extensive short lines. Their followers, who were mainly recruited from among the boardroom traders, finding the market oversold, supplied a buying power which caused the improvement already noted, while bull pools in various special stocks took advantage of the circumstances to renew their activity, though these tendencies were all reversed, of course, by the sudden change in the Cuban situation on Friday.

Reports that gold is likely to go to Germany next week, though supported by the strength of the exchange market, particularly for continental exchange, seemed to have little or no speculative influence. The impression in banking circles is that any gold exports at present would be small, and that, moreover, a further advance in sterling would bring on the market part of the very large amounts of long bills now held here in loans. In the street, while these considerations have weight, they are less important than the fact that the banks and the Treasury are both able to stand a small drain with ease, and the fact that rates for money here compare so favorably with those prevalent in London is also not without its force. London has been doing nothing in our market, the arbitrage trading from day to day indicating a measure of interest in Americans there. At the close on Friday there was considerable natural anxiety as to the view which the London market would take of the latest developments in connection with Cuba.

The market for the week has depended entirely upon professional activity. Its variability within narrow limits is due to this cause. Features have not been plentiful, the chief speculative interest attaching to Sugar and Burlington. The latter stock was the object of decided bear raids, rumors being circulated that an investigation of the company's accounts by a noted expert was proposed, as the result of dissatisfaction of prominent interests in its securities with the payment of dividends alleged to be unearned. These allegations were denied *in toto*, but the stock was forced down to 74⅛, rallying to 74⅞. Covering in other granger railroad shares was, however, facilitated by the attacks on Burlington, and St. Paul, which had fallen to 73⅜, rallied to 75½, the earnings for the first week of the month showing a smaller decrease—only $41,500—than had been expected. The Gould stocks, especially Manhattan, were the object of bear selling, while Atchison was in receipt of support at the declines. Reading was a feature, and was sold down to 25 on the attack on the legality of the charter selected as the method of reorganization. The fact that the company submitted the matter to the attorney-general on Thursday, and that its representatives claim that the so-called National Company—or, as it will be now known, the Reading Company—was a regular legislative charter granted prior to the state constitution of 1874, and kept in full existence, had, however, a good effect, and caused a rally to 27⅜ in the Reading stock, with corresponding gains in the junior securities. Sugar was irregular. It was pressed for sale by the bears, and sold, ex-dividend, down to 110⅛. Later reports from Washington were to the effect that congressional interference with the company was unlikely, and covering from the bears at the capital, with some fresh buying, carried the price to 112⅞. Rubber common is strong on dividend talk, and Chicago Gas, though the object of rumors regarding increased competition, received support from pool interest. The breaks on Friday afternoon were particularly violent in the case of Burlington and Sugar, which fell to 68½ and 108 respectively, though all parts of the share list suffered more or less.

Boston Stock Market.

The volume of transactions has been moderate, and values for railroad shares have shown an easier tone. Atchison closes ⅛ point lower, with Chicago, Burlington & Quincy active at a decline of 2¾. Coppers have shown a firmer tone, Boston & Montana closing 1⅝ points up, and 1 point advance in Butte & Boston, while Calumet & Hecla has sold 5 points higher. Sugar is down 3⅝, but Bay State Gas closes ¼ point higher. United States Leather has ruled dull, with preferred 2¾ points lower.

Prices of principal shares, with volume of transactions, have been as follows:

	Price Dec. 17, 1896.	Week ending Price Dec. 10, 1896.	Sales Dec. 17, 1896.	Sales Dec. 10, 1896.

New Northern Pacific's Net Income.

The Northern Pacific Railway Company, on the first of September last, commenced the operation of the entire system (including the St. Paul & Northern Pacific and other lines heretofore leased and now owned) as one united property, and now reports through its comptroller the following results, which are made up on the reorganized basis as set forth in the official statement made December 1, 1896, to the New York Stock Exchange:

	September.	October.
Gross earnings	$1,833,177.16	$2,498,834.85
Operating expenses	1,045,246.92	1,065,192.26
Net earnings	$787,930.24	$1,433,642.59
Operating charges, taxes, rental and other charges	49,258.87	49,258.87
Net operating income	$738,671.37	$1,384,383.72
Miscellaneous income, not including land sales	20,222.33	14,430.89
Total net income	$758,893.70	$1,398,814.61

The operating expenses for each month include a proportionate part of the estimated taxes and rail and tie renewals for the current year of the new company from September 1, 1896, to July 1, 1897. Earnings have been affected by smaller wheat movement. In November and early December the road was blocked by a blizzard on its east end and heavy floods on its west end. Business is now gradually approaching normal proportions.

* Pittsburgh.

TRADE UNCHANGED.

LITTLE DEMAND FOR STAPLES IN WHOLESALE LINES.

GREATEST ACTIVITY SHOWN IN THE REQUEST FOR CHRISTMAS SPECIALTIES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, December 18.—The tone of trade is quiet in most kinds of merchandise, but the feeling is strong that better times await the new year. The money market continues quiet, with no life to the demand, while available funds are excessive. Indications point to a dull money market for the balance of the year, and, in fact, until business starts up. Call money is quoted at 2@2½ per cent., with time at 3½@4 per cent. as to date. Mercantile paper is in small supply, with good factory paper quoted at 3½ per cent. and mercantile names at 4@4½ per cent. The boot and shoe market is quiet, but the tone is steady. Jobbers look for lower prices and are holding back. Leather is dull, but prices are held steady. Hides keep well sold up, but sales have ruled at lower prices. Lumber is quiet, with prices steady. The coal trade is slow.

Providence, December 18.—The general business conditions remain unchanged. Collections are dull. The weather has interfered to some extent with the Christmas trade, and, except for the cheaper grades, it is thus far reported as not up to the average.

Philadelphia, December 18.—Wool continues quiet and there is little demand for stock. Cotton yarns aae dull. Dry goods jobbers are doing but a moderate business. Retailers are busy with Christmas goods, and there is no disposition to buy outside of these lines. Demand is very light for drugs, paints and glass. Grain is fairly active, with steady prices. Local demand for flour has improved, and prices are firm.

Pittsburgh, December 18.—There has been but little change in general trade, and the volume of business is probably not as large as in the same week last year. Retailers are busy, but holiday shippers are showing a disposition to buy cheaper grades of goods than heretofore, thus curtailing expenditures. Money is in good demand, and while the banks are accommodating regular customers, they are making no effort to obtain new business. There has been less business transacted in the local iron market during the past week than for some time. As predicted, the price of steel has dropped $3 or more per ton, and the prospects for an advance in the near future are not encouraging.

Baltimore, December 18.—Jobbers report trade very quiet. Retail business quite busy with holiday goods. Collections continue fair.

West and Northwest.

Cleveland, December 18.—General business continues quiet, the week having developed no special change.

Cincinnati, December 18.—Business is quiet. Collections are fair.

Chicago, December 18.—Aside from the holiday trade, which is active both with jobbers and retailers, business is quiet, and most lines show a slight falling off. Groceries, however, are more

active, as is usual at this season, the demand being candies, fruits and nuts. Traveling men are in from the road for the holidays, and merchants are busy caring for their annual inventories. Sales of pig iron are light and the market is slow, but former prices are maintained. Steel rail manufacturers have made a price of $26 here for next year's delivery, a decline of $2 from the current rate. This is in sympathy with the recent decline in other articles of steel. Sales of light hardware are fair for the season, but the weather is too mild for an active business in bar iron. Leather is dull, but hides are ⅛c. to ¼c. better. Lumber is slow. The produce trade is quiet. Eggs and butter are lower, but no change of importance has occurred in other lines. Wool receipts, 451,238 pounds. The demand for money is fair, grain men being the best borrowers. Light receipts of hogs keep packers out of the market as large borrowers. Collections are fair in most instances.

Louisville, December 18.—The conditions of general business have not changed materially. Jobbers report a passable dry goods trade. Hardware is active, and the whisky market shows some improvement. Prospects are favorable for the usual holiday trade. Leaf tobacco sales are large and prices more satisfactory. Collections are good.

St. Louis, December 18.—The situation is practically unchanged. Business is of satisfactory volume for the season. Stock-taking has naturally caused a pause, quiet being expected until after the turn of the year. Many manufacturers are busy on spring orders, notably those of boots and shoes. Leather is in fair demand, especially hemlock harness. Hides are quiet at unchanged values. Transactions in pig iron are small, with a scarcity of No. 1 foundry and gray forge. Lead is unchanged and dull. The demand in finished iron and steel lines is light for early delivery, except black and galvanized sheets. Iron bars are held at higher basis established last month. The coffee market continues to show strength, with high grades scarce.

Kansas City, December 18.—Aside from local holiday trade, business is quiet and collections slow.

Milwaukee, December 18.—Business is quiet in most lines. No improvement is reported. Collections are slow.

Minneapolis, December 18.—Continued wild weather affects general business unfavorably.

Duluth, Deeember 18.—Trade continues quiet and collections are not satisfactory.

Omaha, December 18.—The demand for holiday goods is light and trade is only fair. Collections are dull.

Sioux Falls, December 18.—More seasonable weather has given retail trade more life. Jobbers report better business than a year ago. Collections are good.

Southern Cities.

Charleston, December 18.—Business in all lines is quiet and collections are fairly good.

Savannah, December 18.—Local trade is active in consequence of the approaching holidays, and collections continue very fair. Rosin is in strong demand at higher prices on all grades except heavy. Spirits are in good demand at steady prices. Receipts and holdings are very large, and shipments about as usual.

Atlanta, December 18.—A decided decrease is reported in sales of flour and grain. Wholesale grocers report sales slightly under last week. Fancy groceries are unchanged. Fruits are finding a good sale. Sales in dry goods, shoes, notions, etc., are not heavy, as houses are arranging samples and have not put all their men on the road. Sales of liquors and hardware are about the same. Collections are fair.

Augusta, December 18.—Wholesale stocks are being reduced in anticipation of annual inventory, and trade is quiet. Retailers are fairly busy in holiday goods, but business is being complained of as not being up to expectations. A decline in cotton will likely affect country merchants who are still holding.

Jacksonville, December 18.—Trade is reported very active. The approach of the holiday season is considerably increasing the volume of retail trade, with much improvement in wholesale. Collections are considered very fair.

Birmingham, December 18.—There is some business in Christmas novelties, but otherwise it is more or less restricted. Collections are only fair.

Chattanooga, December 18.—Christmas trade is increasing. Merchants are well satisfied. Otherwise no material change is noted.

Nashville, December 18.—Business is active in all lines, particularly in groceries. Country collections are good.

Memphis, December 18.—General trade shows but little change, except in groceries and holiday goods, which is very good.

New Orleans, December 18.—Trade in jobbing lines is fairly good, but not up to expectations. The movement in holiday goods is active. Considerable activity is noted in cotton, with a better undertone. Sugar arrivals are large and demand good. Rice is quiet but steady.

Galveston, December 18.—Jobbers are receiving filling-in orders only, and retailers report holiday trade very light. Collections are coming in slowly.

Pacific Coast.

San Francisco, December 18.—Trade in commercial lines is quiet, and prices have a downward tendency. The price of wheat is unchanged, but freights are dull, and increased acreage of wheat planting is reported.

Portland, December 18.—Retail merchants report holiday trade good. Wholesale business in all lines is quiet.

Seattle, December 18.—The arrival of delayed freight has stimulated business, but it is not up to average of December last year. A steamer is here loading with steel rails, flour, etc., for Japan, and one leaves Sunday for Central American points. Wheat, oats and corn are arriving freely.

Tacoma, December 18.—Holiday trade is up to usual volume. Collections are fair. A steamer cleared this week for the Cape Verde Islands with the largest wheat cargo ever leaving Puget Sound, amounting to 190,000 bushels.

Canada.

Toronto, December 18.—Trade is more active both in wholesale and retail circles. Heavy dry goods, groceries and hardware are in good demand. Prices generally are unchanged and payments fair.

Montreal, December 18.—Mild weather and the bad condition of country roads in earlier part of week have restricted business. Colder weather has had some stimulating effects, but roads still bad. The holiday trade so far has been about up to the average. There are no new features of special note. Collections are moderately good.

Halifax, December 18.—More seasonable weather has stimulated trade in woolens and similar lines, and the approach of the holiday season has made quite a stir among retailers. The travelers for wholesale houses are in, and there is little doing outside of immediate demand on short orders. Remittances from the country are complained of. The Cape Breton mackerel fisheries this fall have been a complete failure. As a result, fishermen in the island will suffer considerably during the coming winter. Advices from Newfoundland are that the straits are blocked with ice, and considerable destitution prevails amongst the fishermen in the northern and more remote sections of the colony.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM DECEMBER 5, 1896, TO DECEMBER 11, 1896, INCLUSIVE.

Dry Goods.

The retail movement for Christmas supplies is active, but the market for general seasonable fabrics is quiet. With first hands business is slow, and jobbers are doing only a moderate picking-up

trade. Cotton fabrics are dull and the tone of the market is easy. This is due to the weakness in raw cotton, together with the large stock of print cloths on hand, which tends to operate against all kinds of brown cottons. Printed fabrics are in good shape to clean up on fall lines, while cards for spring supplies are being shown and are quite freely ordered. Outing cloths are showing up well and have cut largely into the trade for woolen flannels. Dress woolens are quiet, but the mills have taken quite liberal spring orders as a rule. Men's-wear woolens are slow. Spring orders are about all in, and fall orders for next year have not started yet, except on some kinds of overcoatings.

Wool.

The market maintains a steady tone, and the present call for wool is moderate. Occasionally a fair line is cleaned up where a manufacturer is disposed to pay market rates, but the bulk of the sales are confined to moderate parcels here and there, as the wool is needed to use at once. Dealers are very firm in their views as a rule, and in several instances trades on good lots have fallen through with only ½c. between the seller and buyer. Fleeces are in light supply and held at full prices, while the market on territories is very steady. Australian wool is meeting with a fair call, some good sized lines being placed at the market. Australian lamb's wool is firmer abroad. Carpet wools yet meet with a moderate sale, but the market is quoted steady on all grades.

Cotton.

The exports of raw cotton during November and the three months ending November 30, 1896, compared with 1895, were as follows:

	Bales.	*Pounds.*	*Values.*
NOVEMBER.			
1896	1,048,387	523,780,624	$39,504,589
1895	727,843	365,145,982	31,068,475
THREE MONTHS ENDING NOVEMBER 30.			
1896	2,430,343	1,226,890,632	93,705,704
1895	1,502,980	755,996,186	63,801,937

Petroleum.

Exports of mineral oils and its by-products during November and eleven months ending November 30, 1896, compared with similar figures for 1895, were as follows:

AMERICAN MOHAIR IN ENGLAND.

The Boston *Journal of Commerce* says: "Consul Meeker, at Bradford, England, has had on exhibition in his office an American grown mohair fleece, forwarded to Bradford by C. P. Bailey, of San Jose, Cal., and grown on his ranch in Nevada. Mr. Meeker writes that the quality of the hair has been the wonder of all who have seen it, and that it has been closely examined by several of the leading mohair dealers and importers, all of whom have expressed the highest opinion of it. One of the latter, Jonas Whitley, ex-mayor of Bradford, said:

"'I have now in my storehouse about $200,000 worth of mohair, both Turkey and Cape, and I am entirely sincere when I state there is not a better fleece in the lot. I will buy all the American mohair like that that may be offered me at the market price. Should it uniformly equal this fleece I do not know but what I would pay more than the market price. It is remarkable in being almost free from kemp, and I do not know that I have ever handled a fleece with so little kemp in it. The amount of noil is also less than usual, which is very important, as it leaves more weight in long staple to go into tops. I say unhesitatingly that the sample fleece before me is as good mohair as there is grown.'

"All the experts who examined the fleece particularly complimented its luster and quality of the hair, the good length and the weight. The only criticism was (and this was not alluded to by all), there was a little deficiency in color, the ends of some of the clip being brown or stained. It was pointed out, however, that this was not a serious difficulty, as in sorting or classing the brownish tips could be used for lots which were to be made into colored goods. The opinion of all was that the hair ranked fully equal with 'Cape' and good 'Turkey average.' The fleece sent weighed five pounds, and was alleged to have been picked at random, while Turkey fleeces do not average over three pounds in weight. The price of the mohair sent for inspection was twenty-six cents per pound when it left the United States. 'Cape firsts' are now quoted at twenty-eight cents, and 'Turkey average' at thirty-one cents per pound.

"The Bradford mohair trade was thoroughly surprised at the merit of this sample, saying that it has every quality of the best mohair, with the trifling defect of the brownish tips. Breeders are strongly recommended to keep up the quality and color, and if such fleeces can be produced in quantities, the triumph of the United States as a mohair producer is assured. It is stated that Mr. Bailey, the grower of the sample fleece in question, has flocks averaging constantly 8,000 to 10,000 goats. Most of his product is marketed in Boston, but some goes to New York."

ALABAMA IRON SHIPMENTS TO ENGLAND.

The Baltimore *Manufacturers' Record* says: "About two years ago the late Thomas Seddon, at that time president of the Sloss Iron & Steel Co., of Alabama, made an experimental shipment of 250 tons of pig iron to England. This was divided up among a number of consumers, with the request that the iron be thoroughly tested. The majority of people regarded the shipment of Alabama iron to England as a visionary project, and the predictions of the *Manufacturers' Record* of ultimate success were ridiculed. Within the brief period of two years, however, the demonstration is complete. From that experimental 250-ton shipment this business has increased until now there is an actual scarcity of steamer room to handle the business offered. Orders are being booked every week for large shipments to England and to continental countries, and there is now a scarcity of freight room for the iron sold for export. It is difficult to rightly measure the influence of this trade upon the south and upon the world's commercial interests. To have wrested from England the supremacy of the world's iron trade means more than we can grasp, except by a study of what the iron and kindred interests have been to England's position as the dominating power in the commerce of the world. One thing it does mean, and this was lately freely admitted by one of the leading iron men of Great Britain, and this is that England's largest iron enterprises will be forced in self-defense to become interested in southern iron interests. 'We have,' said this gentleman, 'been handling the iron export business of the world. We are acquainted with all its ramifications, and to maintain our business we must be in a position to produce at the lowest possible cost. As the south has demonstrated its ability to produce iron at less than we can do in England, and is thus able to invade the world's markets, our only recourse is to become a part of the south and bring to this region our experience and capital.' This result cannot be expected to come about at once, but the way is being paved for this movement of English capital to come south in self-defense, just as many New England cotton mill people willingly or unwillingly must become interested in cotton manufacturing in the south."

LANDHOLDING IN AMERICA.

The St. Louis *Globe-Democrat* says: "The report of the Secretary of the Interior shows that since the passage of the homestead law there have been nearly 163,000,000 acres of public land entered by settlers, and over 335,000,000 acres have been acquired under other laws. That is to say, the area of settlement and cultivation has been enlarged within the lifetime of the present population of the country to the extent of 498,000,000 acres. These figures tell a story that is without a parallel in the history of civilization, and one that can hardly be comprehended without the aid of the imagination. They are equivalent to an increase of 3,111,250 farms of 160 acres each, or twice that number of the average size of such estates in the localities where most of the entries and purchases have been made. This means a corresponding multiplication of the homes of the people, with all of the attendant gains of comfort and happiness. Never before in a like period since the beginning of time has so much been accomplished in the way of material development and the extension of the means and opportunities of prosperity. The record includes, of course, not merely a great widening of the domain of agriculture, but the forming of new states, the construction of railroads, the building of churches and schoolhouses, and the general advancement of the interests of humanity.

"There are yet about 600,000,000 acres of public lands, not including Indian and military reservations, estimated at 86,960,000 acres, and the district of Alaska; but the most of this residue is considered worthless for civilization. It may be said, therefore, that the end of this process of development has practically been reached. There is no longer any frontier with tempting possibilities for home-seekers. The old song, 'Uncle Sam is rich enough to give us all farm,' has ceased to be true, so far as vacant territory is concerned. There is still a west, but it is now only a geographical expression, and does not signify what it formerly did to people anxious to better their condition through the toil and privation of pioneer life. In the course of events the remaining Indian reservations will be opened to settlement, undoubtedly, and there is reason to expect that the large stretches of arid lands will ultimately be made tillable by some system of irrigation; but the general fact at present is that comparatively little chance is left for securing homes from the government. It will never be possible to duplicate the scheme of beneficence and progress that has enabled so many industrious and deserving citizens to become landowners. The situation has been permanently changed, and a new era has dawned, with different conditions and tendencies.

"We may well give serious thought to the importance of the work of development that is thus brought to a stop by the exhaustion of material, so to speak. It implies a great deal more than a wonderful increase of individual welfare. The effects which it has produced are not confined to the classes or localities immediately concerned. It has brought radical changes to pass for the whole country and for all elements and interests. In a sense, it has compelled a readjustment of business methods and appliances from the Atlantic to the Pacific, and even beyond the oceans to some extent. Its abundant products constitute a potential factor in the markets of the entire world; the influence of its energy and its enterprise is felt everywhere in financial and commercial operations. Moreover, it has invaded the politics of the country, raising new issues and introducing new sources of inspiration, and it has not failed at the same time to make a decided impression upon the social affairs of the nation. It stands for a great empire that has been evolved out of the grass and silence of the public lands since the close of the civil war. No other force of equal strength and significance has ever been added to our facilities of achievement. It is to be regarded with pride and exultation by the people of all sections and all parties, and surely in the future it will be worth still more to us than it has been in the past."

"MUNICIPAL OWNERSHIP A SUCCESS."

The Philadelphia *Press* says: "'A Failure in Philadelphia' is the caption of an editorial in the Cleveland *Leader* on the municipal ownership of gas works. The Brooklyn *Eagle* in a similar spirit supports the argument against municipal ownership by this observation: 'We are informed that in Philadelphia there is a deficiency in the gas account every year which has to be made up by a tax upon the people.' This unfavorable judgment of the profitableness of municipal gas works has some vogue, and is the result of erroneous influences based on the fact that the gas bureau has recently been an applicant for a share of the proceeds from both temporary and permanent loans.

"The inference is a very much mistaken one. The Philadelphia gas works are a source of profit to the city. They always have been profitable, except for a brief period immediately after the reduction of the price from $1.50 to $1 per thousand feet. This reduction caused a slight deficiency at first, which was soon more than made good by the increased consumption which dollar gas brought about. For the year 1895 the receipts of the Philadelphia gas bureau were $3,155,956. The current expenses were $2,985,513. This leaves a net profit of $170,443, of which $54,589 were expended in permanent improvements in connection with the gas plant, and $115,854 were added to the revenue of the city available for other departments. In addition to this the city got its gas free to an amount which, if sold at the usual rate, would have added to the city treasury $638,498.

"This is a very good showing, both for dollar gas and municipal ownership. In his last annual message Mayor Warwick pronounces this judgment as the result of his observation and experience relative to the expediency of municipal ownership of gas works. He says: 'The gas works is one of the most valuable assets of the city. It has been valued at a low calculation at $30,000,000. During my administration I have been strengthened in my belief that the gas works should never be sold.' Director of Public Works Thompson reports that 'since 1887 the bureau of gas has paid to the city in excess of the amount appropriated $5,285,986, and has expended in the same period for mains, sewers and extensions $3,403,347, showing a net profit to the city of $1,882,633, in addition to supplying all public lights free.'

"The director adds that if the city would pay for the gas it consumes and allow him the money for necessary improvements in the plant, the bureau could furnish gas to the people of Philadelphia at seventy-five cents per thousand feet without loss to the city. This does not look like a failure."

TRADE WITH SOUTH AMERICA.

The Philadelphia *Ledger* says: "Mr. Theodore C. Search, of this city, who is president of the National Association of Manufacturers, contributes to the *North American Review* an interesting article on 'Our Trade with South America.' At a time when the close political relation between the United States and the Central and South American republics, as exemplified by the Venezuelan question, occupies so much attention in the mind of the public, it is important to consider our commercial relations with the American republics and the means to be employed to stimulate our exports to those countries. If the United States undertakes to protect these neighbors of ours from the aggressions of European powers, in common justice they should give us the preference in their importations, and to avail ourselves of such an advantage it is necessary that our lawmakers and our merchants should take such action as will facilitate commerce between this nation and the Latin-American governments.

"Mr. Search says that manufacturers have found the capacity of the home market insufficient to absorb their normal output, and the only avenue of relief has presented itself in an enlarged export trade. During the year ended June 30, 1896, the exports of American manufactured products exceeded by $45,000,000 the exports of similar goods for any other yearly period. American manufacturers have become aggressive in their efforts to secure a foothold in foreign markets. A commission representing the National Association of Manufacturers recently spent three months and journeyed 20,000 miles to examine the conditions of trade in Brazil, Uruguay and the Argentine Republic, and to ascertain the possibilities of a larger trade in American products. The members of the party were received everywhere with warm hospitality, and gathered information of great value, which Mr. Search utilizes in his article.

"It is estimated that during 1894 the South American nations imported goods to the value of $430,199,460, and exported goods valued at $239,754,602. In this statement no account is taken of the trade among themselves. Brazil and the Argentine Republic together transact two-thirds of the trade between South America and the principal nations. The imports from South America were as follows: United States, 23.27 per cent.; France, 19.80; Germany, 19.46; United Kingdom, 19.40; Belgium, 8.93; Netherlands, 3.65; Austria-Hungary, 2.20; Spain, 1.37; Italy, 1.26; various, .66. The exports to South America were as follows: United Kingdom, 40.51; France, 20.82; Germany, 14.52; United States, 13.62; Italy, 4.01; Belgium, 2.77; Spain, 1.75; various, 2. Thus it will be seen that while the United States is the largest buyer of South American products, it sells less to South America than either Great Britain, France or Germany sells. Our excess of imports is measured practically by the $70,000,000 worth of coffee which we buy from our southern neighbors.

"Mr. Search finds that England dominates the South American markets by reason of vast investments of British capital, by cheap and speedy ocean transport, by abundant facilities for international banking, by a low cost of manufacture, and by a studious regard for the peculiar requirements of each country's trade. About one-half of the exports to South America from the United States consists of products which meet with little competition from other countries, and include flour, petroleum, hog products and timber. To increase our trade, it is necessary that our merchants shall send representatives to South America, who will live among the people and ascertain accurately what are the requirements of the local markets. We need better facilities for transporting goods. Only one-tenth of our exports is in American ships. We do $150,000,000 worth of business with South America in a year, and 'all our balances' are settled through English or European banking houses. Our consular service is good, but might be much better, and requires establishment on a firm business basis. Mr. Search recommends the restoration of reciprocity treaties as a valuable factor in the improvement of our trade relations."

THE LAST THREE TERRITORIES.

The New York *Sun* says: "From 1876 to 1896 six territories of the United States were admitted to statehood—Montana, Washington, Idaho, Wyoming, Utah and Dakota—the last as two states, North and South Dakota. Prior to that Colorado was admitted on August 1, 1876, and Nebraska on March 1, 1867. There are now remaining only three territories in the United States, exclusive of the District of Columbia, the Indian Territory and Alaska, which makes no serious pretensions to statehood. These three territories are Arizona, New Mexico and Oklahoma, and when all three are admitted into the Union, if they ever are, the United States will extend literally from the Atlantic to the Pacific and from Canada to Mexico.

"Arizona covers an area of 113,000 square miles. New Mexico covers an area of 122,000 square miles, and Oklahoma, with No Man's Land, covers an area of 39,000 square miles—in all 275,000 square miles, or 10,000 square miles more than the entire area of the Lone Star State of Texas. The present population of Arizona is about 70,000, of New Mexico 175,000, and of Oklahoma about 105,000, or 250,000 in all. The population of Texas is about 2,750,000, or more than ten times greater. The objections now interposed to the admission of either Arizona or New Mexico are equally strong in both political parties. The Republicans in Washington, who have been greatly annoyed by the silver senators from the Rocky mountain or mining camp states, have no desire to embarrass the course of legislation further by the admission of two additional states largely given over to mining and grazing, in one of which the English language is not in general use among the inhabitants. The Democrats who favored the admission of New Mexico and Arizona some years ago, and objected to the discrimination which they said at that time was shown against the southern territories and in favor of the northern ones by the Republican Senate, are pretty generally opposed to a further diffusion of political honors, for to admit new and sparsely populated states would be to further decrease the influence of those long ago admitted.

"It is a fact that New Mexico and Arizona were originally one territory, and included portions of the present states of Colorado and Nevada. Subsequently portions were cut off to make up the present states of Colorado and Nevada, and in 1863 the territory of Arizona was established, cut off from the remaining and larger part of New Mexico. The proposition is now made and is being seriously defended that, preparatory to their admission into the Union as states, Arizona and New Mexico should be reunited, and that Oklahoma should be joined with them, and the three made into one state, with a land area of about the same size as Texas, but with a total population now only one-tenth as great. The new state would start under conditions which would give reasonable promise of a sufficient increase in the future to fulfill public requirements. The admission of the three into the Union as one state would probably forestall much of the opposition to the admission of any of them separately, and would eliminate at last the territories from the Union."

TEA TRADE IN RUSSIA.

The *Journal of the London Society of Arts* says: "Tea is the national drink par excellence in Russia. It is as indispensable in the food of the people as bread or meat, and is taken at all hours of the day. In every town tea houses are found, where a large glass of tea, with plenty of sugar in it, is provided at a cost of from 1½d. to 2½d., according to the town and the position of the customers frequenting these establishments. In these circumstances, it is only natural that the consumption of tea in Russia attains enormous proportions and is yearly on the increase. According to the *Journal de la Chambre de Commerce de Constantinople*, Russia imported in 1894 through the port of Odessa 15,692,000 kilograms (kilogram equals 2,204 pounds) of tea from China. Through the custom houses of the Baltic large quantities of tea are entered, chiefly consigned to Moscow or for local consumption, and by the land customs of Eastern Siberia about 20,000,000 kilograms of tea, representing a value of about 50,000,000 roubles, were imported. All the tea imported by way of Odessa or other European frontiers is leaf tea, but that coming into the country via the Chinese frontier is chiefly tea in bricks of different dimensions. These teas are consumed by the nomads and the northern peasants, by reason of their cheapness and the facilities of transport. The customs duties on this kind of tea are much lower than those on leaf tea. In the various retail shops leaf tea is sold, in packets weighing one-eighth, one-quarter, one-half or one Russian pound, at prices, varying according to quality, from 80 copecks to 5 paper roubles the pound, but as a rule sufficiently good tea may be purchased for 1 rouble 50 copecks to 2 roubles 50 copecks per pound. Russia exports annually a certain quantity of tea in packets, prepared by the large importing houses of Moscow, which are well known throughout the whole of Europe. By way of Odessa, 30,000 kilograms were shipped in 1894 to the destinations of Roumania, Bulgaria, Turkey and Austria-Hungary. About two years ago tea from Ceylon began to be imported, but the quantity so far has been inconsiderable."

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 26, 1896.

Judging from Washington advices, the general arbitration treaty for the settlement of disputes with Great Britain has been progressed to such an extent that it may be regarded as practically completed to the satisfaction of both governments. The life of the treaty is purposely made very short—only five years—but this is with the expectation of a renewal for a longer period, if it shall prove to work well, and also to afford easy opportunity for amendment. The personnel of the arbitration commission is to be of the highest character, men selected from the judiciary of each country in equal numbers, three from each side. Provision is made against a failure through a tie vote by the bringing in of an umpire. Neither the Venezuelan question nor the Behring sea issue are to go before this commission, but its first work probably will be to close up the Alaskan boundary controversy and some other open issues of minor interest but real importance. Some doubt has been expressed as to the fate of the treaty in the Senate, owing mainly to the existence of the constitutional dispute which has been sprung by Secretary Olney's attitude upon the Cuban question. It is to be hoped that the Senate, in passing upon the arbitration proposals, will rise superior to considerations of this nature, and will do something in the direction of garnering some, at least, of the victories of peace.

Chairman Dingley has been interviewed in reference to the tariff bill which he has in process of preparation. He says that protection will be the first purpose of the bill, but that it will be framed so as to secure plenty of revenue. He further says, in response to a question as to whether the rates would be higher or lower than in the McKinley law, that he does not know of any industries which need more protection than they had under that law. The hearings by the Ways and Means Committee will begin on Monday next, and will close on January 11. The bill is expected to be ready in time to present it to the extra session. On one point Chairman Dingley speaks unhesitatingly, namely, as to the policy of reciprocity, which he was reported as regarding unfavorably. He says that, on the contrary, all the Republican members of the committee are in favor of going as far as the McKinley tariff law did on this subject, and further if practicable.

President Cleveland has accorded recognition to the latest American state, the new Greater Republic of Central America, by receiving in his capacity of minister the duly accredited envoy to the United States. The project of unifying Central America has been for a considerable time in contemplation, but has as yet been only partially realized. The new state consists of only three of the five Central American states, namely, Salvador, Nicaragua and Honduras, who have united to form the new republic, in pursuance of the treaty of Amapala of June 20, 1895. President Cleveland recognized the new republic on the distinct understanding that the responsibility of each of the three constituent republics to the United States of America remains wholly unaffected. He added that he discerned in the articles of association from which the Diet derives its powers a step toward a closer union of Central American states in the interest of their common defense and general welfare, and that he welcomed it as the precursor of other steps to be taken in the same direction, which he hoped might eventually result in the consolidation of all the states of Central America as one nation for all the purposes of their foreign relations and intercourse.

Secretary Carlisle recurs in his annual report to his former recommendation for the repeal of the twelfth section of the act of July 12, 1882, authorizing the issue of gold certificates. He says that it has been shown by experience that the effect of this provision has been to increase the difficulties of maintaining the free gold in the Treasury at or above the amount of the lawful reserve. The manifest purpose of the law was, he says, to accommodate citizens and financial institutions having gold coin on hand, by providing for its safe custody in the vaults of the Treasury, and at the same time facilitating its practical use in the form of certificates, as a part of the active currency of the country, or in the reserves of the national and other banks. It was evidently supposed that its effect would be simply to increase the total gold holdings in the Treasury without diminishing the amount of free gold; but it has been found that the privilege to make deposits and receive certificates is a constant temptation to present notes and withdraw free gold from the Treasury, to be redeposited for the benefit of the holders of the redeemed notes. A bill repealing this provision was passed by the House of Representatives in the last Congress, but it was not passed by the Senate.

An agreement is understood to have been reached for the modification of the quarantine restrictions imposed by the governments of the United States and of the Dominion of Canada upon the shipment of cattle through each other's territory. The agreement has been negotiated by Secretary Morton and Mr. Sidney Fisher, the Canadian Minister of Agriculture. The latter is quoted in an interview as saying that the agreement would have to be first submitted by him to the council of ministers at Ottawa before it could be promulgated. The agreement appears not to cover the matter of transportation of cattle into or through the other country for the foreign trade. The occasion for the agreement that has been reached, Mr. Fisher says, grew out of the changed conditions that exist now. When pleuro-pneumonia afflicted the cattle of the United States and Canada, both countries established strict quarantine regulations in the interests of the health of both. These have remained in force while the disease has entirely disappeared, and they have proved a source of irritation to the shippers of each. It was difficult and seemed impossible to change them by correspondence, but a personal conference has resulted most satisfactorily.

Suggestions looking to the utilization of the labor of convicts are being made from time to time by the New York Prison Commission. It appears that about half of the 3,200 convicts in the state prisons are at present employed in productive industries, and the desideratum is to provide employment for the 1,600 or so who are not now productively employed. The commission has learned that 250 men can be employed in making the requisite number of shoes if made without machinery. The suggestion is made that if 250 men can be employed in the making of shoes by hand, a large number of men can be employed in making the thousands of articles of clothing required by estimates already sent in to the commission, as well as in canning vegetables and fruits for all the institutions of the state, in a tile industry, in a matting industry, in the manufacture of cloth for the clothing of the inmates of institutions, and in the breaking of stone to be given free of charge to the different counties for their roads.

A number of amendments to the law are suggested by the Interstate Commerce Commission in its report. It urges that the procedure in the courts for enforcement of orders of the commission should be confined to the record made before the commission, and that the orders of the commission should be enforced unless the court shall find in the proceeding some material error which furnishes sufficient reason for refusing to enforce it; that section 15 be so amended as to make it expressly provide that the commission may, after due procedure and investigation, issue an order requiring the rates, facilities or practices complained of to be changed, modified or corrected as in the order specified; that railroad corporations be made liable to indictment for offenses against the statute, as well as their officers, agents and employees; that the carriers be required to adopt a uniform freight classification, and that the rate sheets, reports and contracts of carriers on file with the commission be made by express provision in the statute competent testimony and prima facie evidence of what they purport to be in all proceedings before the commission or in the courts.

Before finishing its deliberations at Cincinnati the American Federation of Labor passed a number of resolutions on a variety of subjects. One of these suggested the making the head of the Department of Labor a Cabinet officer. Another resolution provided that no official of the order should be allowed to affiliate or act in participation with any political party. Still others recommended that union men should not enlist in the state militia, that cars not carrying the mails be prevented from using signs indicating that they do so, and that the government should have control of all means of communication and transportation.

It seems likely that unless the Sultan will within a brief time make it plain to the powers that he intends to give guarantees of reform, a policy of coercion will be initiated by the allied states of Europe. The European statesmen appear to have reached the limit of their forbearance, and to have decided that only measures of compulsion will avail to secure such a change of conditions as they desire. The matter has been under discussion for some time, and a general agreement has been arrived at. Russia seems to be in hearty sympathy with Great Britain as regards the need of doing something more than addressing requests to deaf ears. One of the best known Russian journals announces that it is probable that within a few days the Russian Black sea fleet will appear in the Bosphorus, where it will be joined by the squadrons of the other powers from the Dardanelles. The attitude of Russia makes it possible for the powers to act with vigor and dispatch if coercive action should be necessary.

FIRM MONEY IN LONDON.

London financial papers continue, in all appearance, to mininize the importance of the holding back of sterling exchange in this market. The facts in this connection have been referred to in these columns for several weeks past, nor has anything transpired which would indicate that exaggeration has prevailed about the amount of long sterling bills that have been taken up here and placed as collateral for loans. The steady increase in the average loans of the New York associated banks since the election can hardly be explained on any other hypothesis, and the volume of that increase is in keeping with the current estimates that from £8,000,000 to £10,000,000 of London's obligations have virtually been discounted here. The estimates accepted at London are, as already stated, considerably lower. According to some recent cable dispatches they are believed to be as small as £1,000,000 to £2,000,000, and the views on the subject entertained in New York are dismissed as exaggerated. The exact truth of the matter cannot, of course, be known till the entire mass of exchange thus held matures. The earliest purchases of long bills on the market for the purpose in question began within a few days of the election. Having, as they did, 30 to 60 days to run, their maturity, when they would be available and be drawn against as obligations on demand, would begin in January and not be completed till March.

The matter seems likely, however, to play an important part in the future of the London money market, which at the present moment is very sensitive and decidedly firm. Berlin, too, has been in a state verging on stringency, and the rates there, which are 4¾ per cent. for open market discounts and 5 per cent. as the bank figures, have attracted money from London, adding in no small degree to the difficulties with which the latter has to contend. In London discount holds firm at 3¾ per cent. or thereabouts, and the general belief is that the financial arrangements rendered necessary by the new year may result in more or less decided pressure. The Bank of England has, according to the official statement issued on Thursday and confirmed by the outside cabled advices, been lending freely to the open market, while further demands on it are considered inevitable next week. Another matter of decided interest in this connection is the further advance in interest rates throughout India. The Bank of Bengal at Calcutta and the Bank of Bombay this week marked up their rates once more, making the figures for discounts 10 per cent., or a total rise of 7 per cent. since September last. The financial situation in Great Britain's eastern dependency, due to the famine and other causes, is indeed of a character to justify continued apprehensions that the British money market will be appealed to from that quarter for tangible help.

It has been held that the relatively stringent condition that has prevailed in connection with money at London will disappear soon after January 1. This expectation is even made the basis for a belief that, after the turn of the year and the readjustment of the financial situation at London, a renewal of activity and interest in American securities there may be counted on. The latest indications, however, do not tend to confirm such hopeful views. Apart from the possibility of further calls for money from Berlin, or of pressure in India, to which the London market would be obliged to respond, the course of events there is not, it seems, favorable to an immediate return to easy rates. For instance, while under ordinary circumstances the whole of the large extra advances made by the Bank of England during December to bill brokers, discount houses and other lending agencies is repaid during January, this year, according to all accounts, a part of the current arrangements with the bank extend well into the new year, furnishing evidence that the interests closest to the market are apprehensive. The question of the maturity of the considerable amount of exchange now held here, and which, it has been pointed out, will commence to mature in January, is also a factor in the case, and if, as is most likely, it should prove that London has indulged in a decided underestimate of its amount, it might still further embarrass the money market there. For some weeks to come the action of the world's greatest money market will be watched with the closest attention, as its influence will be felt in many directions, even if for the present accumulations of idle funds and abnormally easy rates here should deprive it of immediate effect on the American markets.

CONGRESS AND THE STATE DEPARTMENT.

A new phase has been put upon the Cuban question by the declaration of Secretary Olney, given to the press on Saturday, in which he says:

> I have no objection to stating my own view of the resolution respecting the independence of the so-called republic of Cuba, which, it is reported, is to be laid before the Senate on Monday. Indeed, as there are likely to be serious misapprehensions regarding such resolution, both in this country and abroad, and as such apprehensions may have injurious results of a grave character, it is perhaps my duty to point out that the resolution, if passed by the Senate, can probably be regarded only as an expression of opinion by the eminent gentlemen who vote for it in the Senate, and if passed by the House of Representatives can only be regarded as another expression of opinion by the eminent gentlemen who vote for it in the House.
>
> The power to recognize the so-called republic of Cuba as an independent state rests exclusively with the Executive. A resolution on the subject by the Senate or by the House, by both bodies or by one, whether concurrent or joint, is inoperative as legislation, and is important only as advice of great weight, voluntarily tendered to the Executive, regarding the manner in which he shall exercise his constitutional functions.
>
> The operation and effect of the proposed resolution, therefore, even if passed by both houses of Congress by a two-thirds vote, are perfectly plain. It may raise expectations in some quarters which can never be realized. It may inflame popular passions both in this country and elsewhere, may thus put in peril the lives and property of American citizens who are resident and traveling abroad, and will certainly obstruct, and perhaps defeat, the best efforts of this government to afford such citizens due protection. But, except in these ways, and unless the advice embodied in the resolution shall lead the Executive to revise conclusions already reached and officially declared, the resolution will be without effect, and will leave unaltered the attitude of this government toward the two contending parties in Cuba.

This declaration of Secretary Olney has simply put into concrete form the conclusions reached by the people who are not imposed upon by the sensational diatribes of senators anxious to gain popular applause, and voices the opinion of publicists who have given thought and study to the question of the Executive prerogative in our foreign relations.

The press reports of interviews of senators and others upon the question at issue have contained much that is very silly, considered as bearing upon the constitutional point involved. It is gravely argued that in case resolutions such as those proposed in the Senate should be passed by that body and by the House of Representatives over the veto of the President, they would constitute a legal enactment which the President could not disregard, because they would be in effect laws which he is bound to enforce. Those who argue this way seem to forget that under our constitutional system even an enactment by both houses of Congress in which the President joins by affixing his signature as an indication of approval may be set aside by a judgment of the Supreme Court or of any subordinate federal tribunal, and that in the case of such an enactment it is proper not only for a person like the President whose prerogatives may be invaded by it, but for an ordinary citizen, to refuse to be bound by an enactment which he regards as unconstitutional, and, in fact, as not law in the sense in which that term is understood by students of constitutional law.

The consensus of opinion of statesmen and publicists of authority in the United States has been in favor of the exclusive right of the executive department to pass upon such questions as that of the recognition of foreign states. In illustration of this position we may cite the declaration of one of our great foreign secretaries, Mr. Seward, who said in his instructions to Mr. Dayton at Paris in 1864: "The question of recognition of foreign revolutionary or reactionary governments is one exclusively for the Executive and cannot be determined internationally by congressional action." This is a view of the matter in which the great foreign Secretary of the civil war period is joined by practically every constitutional lawyer of any consequence who has been quoted on the question now at issue between the President and Congress.

Substantial reasons for this view of the matter are not far to seek. The President and his Secretary of State are under our system charged with the management of our foreign relations. Only they can be at all times informed about the real condition of those relations. Every resolution asking for information which goes from either House of Congress assumes the Executive control of such information by asking it only in case it is not prejudicial to the public interest, a matter upon which the decision of the Executive is regarded as binding. It would be absurd to take the management of our foreign affairs from the President and his Secretary of State and give it to such a collection of persons as our modern Senate has shown itself to be.

There can be no doubt as to the right of Congress to declare war—a right which is expressly conferred upon the legislative branch of the government by the Constitution. Congress, however, has not seen fit to declare war against Spain. If it should there would be no question here of its constitutional right to do so. It has not done so, however, and in the case of its failure to do so the right of the Executive to act cannot be successfully disputed. It has been said that recognition of belligerency or independence may lead to war, and that therefore the granting of such recognition inheres in Congress under the right to declare war. But the decision of an admiralty judge of the United States may conceivably lead to war, yet that fact does not entitle Congress to pass judicially on an admiralty case under the power to declare war.

The truth of the matter is that it would redound much more to the credit of the Senate if it were to retreat from the conflict which it has provoked with Secretary Olney, and devote itself to legislation of a domestic character which is within its competence. The people of the United States have had but a short time to pass judgment upon their present Secretary of State, but unless we should be very much mistaken, they will enroll him among the great foreign secretaries who have served the republic, and they will not be led lightly to conclude that he has sacrificed the standing of the United States among our sister republics, or those peoples who aim to become members of the sisterhood of republics. On the other hand, they will be led to conclude that the stand he has taken is justified not only by considerations of international polity, but by reasons derived from our constitutional system. If Congress were wise, it would leave delicate questions of foreign affairs, short of actual declarations of war, to be determined by a foreign Secretary whose Americanism cannot be questioned, and give its serious attention to the removal of domestic difficulties and weaknesses which are too apt to be forgotten in the excitement of questions relating to foreign affairs. What the country most needs from Congress is a rest from alarmist policies, and the chance for recuperation which a period of relief from disturbing congressional activity would allow, aided by legislation the enactment of which is demanded by considerations of economic and financial welfare.

BUSINESS AND THE TARIFF OUTLOOK.

It is evident we are to have tariff revision. Most of the industrial lines which have been tariff beneficiaries of prominence are arranging schedules of what they would like in the way of tariff revision. Many whose business prospects are affected by the outlook for early tariff legislation are endeavoring to determine, so far as possible, the likelihood of a new tariff bill becoming a law by July 1 next or September 1, or later in 1897. The practical unanimity shown in "guessing" that a tariff bill will be one of the first acts of the next Congress—that it will be rushed through and put into operation without delay—is more than striking. What this means as to the opportunity for general trade to revive by next fall is another matter. It would almost seem as if there is some doubt whether the commercial world is to be permitted to attend strictly to business without interference and unsettling legislative activity.

The question of an unsound currency having received its quietus, for four years at least, the troubles of foreign countries and colonies and the tariff are apparently to take first place.

Just where tariff legislation is likely to halt, if the doors are once opened, remains to be seen. When the rising tide of demand for "more" once reaches the edge of the dam, a mighty stream is sure to pour over the top. The need of tariff legislation is completely justified in the minds of those who explain that we require a larger revenue to meet the expenses of "running" the government. There are two replies: One, that smaller or fewer appropriations among those not absolutely essential would make the income equal to the annual expenses of the nation, and the other, that as almost all the proposed tariff legislation is to put rates upward, how the new tariff is to

increase the revenues, if importations are to be cut down, is not very clear.

The position of manufacturers, many of whom are firmly committed to the need for ample tariff rates, is well illustrated by the attitude of Paterson silk manufacturers, who made public their views at a recent conference on the proposed tariff on silk with the member of Congress from the Silk City. There were twenty-eight silk manufacturing concerns represented, the object being to have their views presented to the House Committee on Ways and Means December 29. One speaker said that an advance in the tariff is not desired. What is most desired is a change from an ad valorem duty to a compound duty, combining both ad valorem and specific. He considered a duty of 45 per cent.—30 per cent. specific and 15 per cent. ad valorem—would be about right. He thought that too much protection was as much to be dreaded as too little, and advocated a specific duty of $1.60 on black and $2.40 on colored goods, with an ad valorem duty of 15 per cent.

Competition from Japanese silk manufacturers seemed to be regarded as particularly threatening, and one opinion offered was that importation of Japanese silks under the guise of products of other countries should be punished by imprisonment and fine, in which view "many present coincided."

Another manufacturer wanted the present silk schedule to stand, with "only a few far-reaching changes." He advocated a 50 per cent. ad valorem duty and an extra duty of 10 cents per square yard on all goods weighing 1¼ ounces per square yard. This, he thought, would meet the competition from China and Japan.

A fourth silk man said it would be a difficult matter to decide upon an equitable ad valorem duty on silks which ranged in value from 17 cents to $1.75 per yard, and he therefore advocated the combination of specific and ad valorem duties. This suggested the propriety of the view of the gentleman who presided at the meeting that the varied character of the silk industry is such that it requires time to figure out what classes of goods would come under the specific, ad valorem or duplex duties. "The Silk Association of America has been gaining evidence, and has come to the conclusion that a duty of about 45 per cent. is what they want." He understood that so far as the Japanese competition is concerned no discrimination could be made, but another opinion was that "a treaty with Japan, which goes into effect in 1899, provides against discrimination, but until that time this country might discriminate against the importation of Japanese goods." One manufacturer declared it would be unfortunate to the silk trade to commit themselves to a compound duty. If duties were put upon goods to keep them out, the foreign makers would find a way to cover the markets here by establishing branch manufactories in this country; but another considered the present duty unsatisfactory, as he had gone over the productions of his mill for more than a year, and had found that 45 per cent. was an average per cent. of the selling price of the goods.

In conclusion, a committee was appointed to confer with the Silk Association of America and report.

If the foregoing may be taken as an example of the interest manifested in tariff revision during 1897, it is a matter of inference to him who is able to judge, how much may be expected in the way of a revival of general trade during the next few months.

RAILROAD DIVIDEND PROSPECTS.

The declaration of dividends upon the stocks of the so-called Vanderbilt group of roads this week seems to have created fresh interest in the probable action of the managers of several other important properties. The four roads whose headquarters are in the Grand Central Station at New York, and which acted upon the question of a division of profits this week, were the New York Central, Lake Shore, Michigan Central and Canada Southern. The first of these, the New York Central, declared the customary 1 per cent. for the quarter ending December 31, and at the same time the following statement (partly estimated) of its earnings for the three months and six months ending on the above date was presented, comparison being made with the actual results for the corresponding periods of 1895:

NEW YORK CENTRAL.

Quarter end'g Dec. 31.	1896.	1895.	*Changes.*
Gross earnings	$11,730,106	$12,407,896	Dec. $677,500
Operating expenses	7,926,178	8,443,635	Dec. 517,457
Net earnings	$3,804,218	$3,964,261	Dec. $160,043
Charges	2,637,490	2,647,952	Dec. 10,462
Profit	$1,166,728	$1,316,498	Dec. $149,580
Dividend	1,000,000	1,000,000	----
Surplus	$166,728	$316,308	Dec. $149,580
Six mos. end'g Dec. 31.			
Gross earnings	$23,000,295	$24,008,401	Dec. $1,008,106
Operating expenses	15,522,946	16,189,159	Dec. 666,213
Net earnings	$7,477,349	$7,819,242	Dec. $341,893
Charges	5,264,578	5,278,502	Dec. 13,924
Profit	$2,212,771	$2,540,740	Dec. $327,969
Dividend	2,000,000	2,000,000	----
Surplus	$212,771	$540,740	Dec. $327,969

In the case of the Lake Shore road the customary 3 per cent. for the last half of the current year was announced, and the following statement (partly estimated) for the year was submitted:

LAKE SHORE AND MICHIGAN CENTRAL.

Year.	1896.	1895.	*Changes.*
Gross earnings	$20,205,932	$21,015,035	Dec. $809,103
Operating expenses	13,823,594	14,568,220	Dec. 744,626
Net earnings	$6,382,338	$6,447,815	Dec. $65,477
Fixed charges	3,360,000	3,419,500	Dec. 59,500
Balance to stock	$3,022,338	$3,028,315	Dec. $5,977
Dividends	2,967,990	2,967,990	----
Surplus	$54,348	$60,325	Dec. $5,977

In this case the earnings applicable to dividends were equivalent to 6.11 per cent. on the stock, as compared with 6.12 per cent. in 1895. It is also to be noted that the company this year retired $250,000 of bonds, and that, as in the past, the absence of a construction account and the charging of improvements and additions to the plant directly in the operating expenses has continued.

Michigan Central's dividend for the half year was, as usual, 2 per cent., and the statement (partly estimated) for 1896 presents the following comparisons with 1895 and 1894:

MICHIGAN CENTRAL SYSTEM, THREE YEARS.

Year.	1896.	1895.	1894.
Gross earnings	$13,818,000	$13,651,420	$12,584,013
Operating expenses	10,355,000	10,183,231	9,144,107
Net earnings	$3,463,000	$3,468,189	$3,439,905
Charges	2,396,000	2,402,201	2,401,184
Surplus	$1,067,000	$1,065,988	$1,036,720
Prop. to Mich. Central	771,000	761,273	750,912
To Canada Southern	296,000	304,715	287,808

For the year 1896, as compared with 1895 alone, the following comparison and changes in net and its disposition are exhibited by the Michigan Central:

MICHIGAN CENTRAL.

Year.	1896.	1895.	1894.
Net earnings	$771,000	$761,273	$750,912
Other income	40,000	49,077	44,649
Totals	$811,000	$810,350	$795,561
Dividends	749,520	749,520	749,528
Surplus	$61,480	$60,830	$46,033

The Canada Southern was the only one of the group in which the dividend rate was changed. Whereas 1¼ per cent. was paid a year ago, the dividend for the half year declared this time was reduced to 1 per cent. The company's income account was as follows:

CANADA SOUTHERN.

Year.	1896.	1895.	1894.
Net earnings	$296,000	$304,715	$287,808
Other income	2,000	18,660	7,413
Totals	$298,000	$323,375	$295,221
Dividends	337,500	375,000	375,000
Deficit	$39,500	$51,625	$79,779
Previous surplus	59,000	110,822	190,599
Total deficit	$19,500	*$50,198	*$110,82.

* Surplus.

The reduction of the Canada Southern was, in fact, the chief incident in the action of the Vanderbilt road directors. The policy pursued in this respect is sufficiently explained by the reduced income of the property, and the fact that even the present reduction was insufficient to avert a deficit after dividends for the year.

This, however, has apparently drawn increased attention to the outlook for the Delaware & Hudson property, particularly as there is now a considerable Vanderbilt interest in the company, and a representative of that interest in the company's direction. The selling of the stock, which this week brought the stock down from 125 to 117⅝, may have been of bearish origin. This was also surmised of the rumors that accompanied it, to the effect that the earnings for the current year, from which the dividends for 1897 will be paid, fall somewhat below the 7 per cent. paid during the present year. For this reason, and owing to the fact that the coal roads, despite the new agreement, have had a relatively poor year, it is urged that the dividend to be paid on Delaware & Hudson stock for the coming year is very likely to be reduced in amount, though the fact that Wall street in this matter is guessing rather than inferring from facts of a public nature must be borne in mind.

Another road the position of which is attracting attention and which is the object of no small amount of surmise and rumor is Long Island. The recent death of the company's president and virtual creator, Mr. Austin Corbin, has been followed by a marked fall in the market value of the stock, which last year sold as high as 85, but has this week been marketed at 45. One cause assigned for the shrinkage is that considerable investment holdings have been thrown over, but a possible passing of the 4 per cent. annual dividends that have been paid when the next quarterly period arrives, and the allegation that there is a large floating debt, necessitating some adjustment of the company's finances, seem in the eyes of Wall street a sufficient practical explanation of its course. It may also be noted that other rumors have been heard that the Vanderbilt interest may ultimately acquire control of Long Island, the building of a connection between its lines and those of the New York Central over the waters of the East river or the sound, giving the New York Central access to the water front of Brooklyn, being suggested as a possible move in this connection. Nothing to substantiate this view has, however, appeared.

CARLISLE ON CURRENCY AND REVENUE LEGISLATION.

The central feature of the last annual report of Secretary Carlisle is his discussion of the currency question, and particularly his argument as to the need of legislation to retire the greenbacks. He points out that since March 1, 1893, United States bonds to the amount of $262,315,400 have been issued and sold for $293,481,894.90 in gold, while during the same time notes have been redeemed in gold to the amount of $457,039,855, and on the 1st day of December, 1896, there was free gold in the Treasury to the amount of $131,510,352. Since the resumption of specie payments on the 1st day of January, 1879, United States notes to the amount of $470,490,987, and Treasury notes issued under the act of 1890 to the amount of $86,428,881, making $556,919,868 in the aggregate, have been redeemed in gold, and since August 1, 1893, Treasury notes to the amount of $35,121,722 have been redeemed in silver, and the notes so redeemed have been canceled and retired from circulation. Making no deductions on account of the loss or destruction of notes, the total amount of United States currency in existence on the 1st day of December, 1896, was $468,358,296, consisting of $346,681,016 in United States notes and $121,677,280 in Treasury notes of 1890, and consequently it appears that the entire volume of such notes has been once redeemed in gold, and more than $98,561,000 have been twice redeemed.

Once again the Secretary urges upon Congress the importance of permanently retiring these notes as the only certain means of securing the stability of the currency and relieving the government from periodical financial embarrassment. The use of the notes in question as a circulating medium, the Secretary says, compels the government to provide a large gold reserve for their current redemption, and as they are reissued when redeemed, such reserve must be replenished from time to time in order to afford the public a reasonable assurance that no default will be made in the discharge of our public obligations. The difficulty of procuring gold for this purpose is greatly increased at the very times when its possession is most necessary, and consequently the government, being at such times entirely deprived of gold receipts from the ordinary sources of revenue, is compelled to issue and sell bonds upon terms less favorable than might be procured under other circumstances. The annual interest upon the addition to the public debt which has been made to procure and maintain the reserve amounts to $16,312,616, and the aggregate of the principal and interest at the maturity of the bonds will be more than $641,000,000, and yet the notes themselves, on account of which this enormous indebtedness has been incurred, will, if our present policy is maintained, remain unpaid. But it cannot be safely assumed that this will be the whole measure of the burden imposed upon the people, because, if provision is not made for the cancellation of this currency, it is reasonably certain that emergencies will hereafter arise, from time to time, compelling the issue and sale of additional bonds to replenish the reserve, thus increasing our interest-bearing debt without in the least diminishing our obligations on account of the notes.

Secretary Carlisle well says that the maintenance of a policy which necessarily imposes upon the government the burden of furnishing gold at the public expense to all who may demand it for use or hoarding at home, or for export to other countries, cannot be justified upon any ground of expediency or sound financial principle, and even if the periodical and frequently recurring demands for gold did not weaken the foundations of our entire currency system, thus impairing confidence and depressing business, it would nevertheless be the duty of all who are charged with any degree of responsibility for the adoption of proper financial methods to insist upon the refor-

mation of our laws on this subject at the earliest possible day. The issue and redemption of circulating notes, he says, is not a proper function of the Treasury Department, or of any other department of the government. While the government has power to borrow money, it is not its duty to issue public obligations merely for the purpose of providing a paper currency for use in the transaction of business, nor has it the constitutional power, in the Secretary's opinion, to make promises legal tender in the payment of private debts. Such a policy, even if sanctioned by the Constitution, instead of imparting strength and stability to our currency system, seriously endangers it by the introduction of political and partisan considerations into the management of a subject which ought to be regulated entirely by the business interests of the people and by the laws of trade and the principles which control honest commercial intercourse.

The Secretary says that although the actual ability of the government to redeem its notes promptly in gold coin may be undisputed, still the question whether they will be or ought to be so redeemed must always be open to public discussion, and it is well known that the constant agitation of this question during the past few years has upon several occasions greatly imperiled the safety of our entire currency system. So long as the United States notes remain in circulation questions as to the mode and manner of their redemption and as to the means of procuring and maintaining a coin reserve for that purpose will be made political issues, and so long as these questions remain in politics public confidence in the stability of our currency must be more or less disturbed. Even if the agitation of these questions affected only the value of United States notes, Mr. Carlisle says, the consequences would be sufficiently serious to justify a demand for their permanent retirement, but the character of our currency is such that whatever creates a doubt or suspicion concerning their prompt redemption in gold on presentation necessarily impairs confidence in the whole volume of our circulation, and inflicts much greater injury upon the public than could possibly result from the failure of ordinary banking institutions to redeem their paper. Every menace to the gold reserve and every manifestation of a formidable public sentiment in favor of the redemption of our notes otherwise than in gold coin at once alarms the whole business community, depresses trade and industry, and impairs the value of our public and private securities in all the markets of the world. There is but one absolutely certain way to remove this delicate and dangerous question from our party politics, and that is to retire and cancel the notes. All attempts to hoard them permanently by the government must fail, for the obvious reason that our people will not consent to be taxed merely for the purpose of accumulating and holding a large and useless surplus in the Treasury. Besides, the notes must be withdrawn from circulation in order to be hoarded, and when withdrawn from circulation it would be far more advantageous to the public to cancel them than to keep them on hand as a constant temptation to indulge in unnecessary and extravagant expenditures.

Regarding the alleged danger of contraction of the currency arising from the retirement of the legal tenders, Secretary Carlisle says that he is thoroughly convinced that the retirement and cancellation of United States notes of both classes, under such reasonable limitations and restrictions as to time and methods as Congress may see proper to prescribe, or as a prudent Secretary of the Treasury would adopt in the exercise of his official discretion, would not result, either permanently or temporarily, in an injurious contraction of the currency. No government, however despotic, can, he says, prescribe the exact amount of currency its people shall use in the transaction of their business, and every attempt to regulate this subject by arbitrary rules in the form of legislation, or otherwise, is a departure from true economic principles. The people, if left free to conduct their business affairs in their own way, will always decide for themselves how much money they need, and, unless prevented by artificial obstructions, the necessary amount will always be supplied either from their own resources at home or through exchanges abroad. The volume of business transacted determines the amount of money and credit required, and whenever the volume of business demands an additional supply of money or an extension of credit, the demand will certainly be complied with, provided the laws do not interfere to prevent it. As rapidly as our notes are redeemed and canceled, gold, or a currency as good as gold, will take their places in the circulation, if the interests of the country require it.

Whatever plan may be finally adopted for the retirement of United States notes and Treasury notes, Secretary Carlisle says, it will fail to afford complete protection to the government against demands for gold in the future unless it includes a provision relieving the Treasury from the obligation to redeem national bank notes, except such as are worn, mutilated or defaced, and the notes of failed banks, or requires these institutions to keep their 5 per cent. redemption fund in gold and to deposit gold coin for the withdrawal of bonds when circulation is to be surrendered or reduced. Whoever is permitted to furnish paper currency should, Mr. Carlisle says, be required to keep it good in the hands of the people, by furnishing the means for its prompt redemption in coin when demanded, and the retirement of the United States legal-tender notes will necessarily devolve this duty upon the banks of issue, whether they be organized under our present laws or under some improved system which will give greater elasticity to our currency and afford better opportunities for the employment of capital and commercial credit in banking institutions. The Secretary renews his former recommendations that the national banking law be so amended as to permit the issue of circulating notes equal in amount to the face value of the bonds deposited and reduce the tax on notes to one-fourth of 1 per centum per annum, and that authority be given to establish branch banks for the transaction of all kinds of business now allowed, except the issue of circulating notes. These amendments would, he urges, greatly improve the system, by increasing its efficiency as a means of furnishing accommodations to the people in times of need and in localities where adequate banking facilities do not now exist.

In discussing the question of revenue legislation, the Secretary declares that what is most needed at present is not more taxes, but more economy in appropriations. He expresses the belief that a careful consideration of the existing situation, and a conservative reliance upon improved business conditions in the future, fully justify the conclusion that the estimated deficiencies for the current year and for the year 1898 will not be realized, unless our public expenditures shall be very materially increased by acts of Congress, and that with proper economy in administration and such reductions in appropriations as might be made without detriment to the public service, the receipts will be equal to the disbursements in 1898. However this may be, he says, the condition of the Treasury is such that no revenue legislation is immediately necessary, or can become necessary for a considerable time, in order to enable the government promptly to meet all its ordinary obligations. Although the receipts from the ordinary sources of revenue during the last three fiscal years have been less than the expenditures, there have been at all times sufficient available funds in the Treasury to maintain an efficient public service and discharge the current obligations of the government, and no public creditor has been delayed in the collection of his claim, nor has the business of the country ever been disturbed by a doubt concerning the ability of the government to defray its ordinary expenses. The Secretary's argument has in its main lines been made familiar already, but it seems likely that it will make little impression upon the majority in Congress.

DETAILS OF OUR FOREIGN TRADE.

Foreign trade conditions have been, and continue to be, favorable to this country. For a long time past—in fact, since September, 1895—our monthly exports have exceeded imports, and the balance of trade, so called, is well in our favor. The detailed report by the Bureau of Statistics of the Treasury Department for October and for ten months of the calendar year will reward examination, as it shows the extent to which our export trade has developed, while our import trade has shown an almost correspondingly heavy reduction.

The summarized totals for October and ten months' trade this year and last follow:

OCTOBER.

Imports.	1896.	1895.	*Changes.*
Duty free	$24,013,440	$37,765,403	Dec. 36.0 per cent.
Dutiable	26,453,869	37,314,941	Dec. 29.0 per cent.
Totals	50,467,309	75,080,344	Dec. 32.8 per cent.
Exports.			
Domestic	111,967,752	85,089,206	Inc. 31.6 per cent.
Foreign	1,558,790	2,001,766	Dec. 22.0 per cent.
Totals	113,526,542	87,090,972	Inc. 30.0 per cent.
Total trade	163,983,851	162,171,316	Inc. 1.1 per cent.

TEN MONTHS ENDING OCTOBER 31.

Imports.	1896.	1895.	*Changes.*
Duty free	$262,233,173	$322,803,393	Dec. 18.7 per cent.
Dutiable	310,322,425	353,320,090	Dec. 12.1 per cent.
Totals	572,555,598	676,123,483	Dec. 15.3 per cent.
Exports.			
Domestic	762,931,100	631,513,565	Inc. 20.8 per cent.
Foreign	16,657,302	13,504,873	Inc. 23.3 per cent.
Totals	779,588,432	645,018,438	Inc. 20.8 per cent.
Total trade	1,352,144,030	1,321,141,721	Inc. 2.3 per cent.

It will be seen from the above that our imports during October this year were only $50,467,309, a falling off of nearly 33 per cent. from a year ago. The heaviest decline was in the item of duty-free imports, which fell off 36 per cent., while the decrease in dutiable imports was 29 per cent. Exports, on the other hand, in October amounted to over $113,000,000, an increase of 30 per cent. This resulted in a total trade during the month of October of $164,000,000, an increase of only about 1 per cent. over October a year ago—the increase, however, as above stated, being on the right side of the ledger.

For ten months the showing, if anything, is better than that for October. Imports for the ten months amounted to $572,555,598, a falling off of over 15 per cent. from a year ago, while exports, on the other hand, amounted to $779,588,432, an excess of $207,000,000 in exports over imports, and an increase over a year ago of nearly 21 per cent. It is true that the relatively heavier falling off in duty-free imports than in dutiable goods, 18.7 per cent., against 12.1 per cent., is not altogether encouraging, indicating, as it does, a decreased demand for raw materials for American manufactures. While on this subject the following table of leading imports during the ten months will be found of interest:

Imports.	1896.	1895.
Chemicals, drugs and dyes	$38,127,271	$37,003,254
Coffee	63,340,640	83,156,915
Cotton goods	26,141,564	29,717,675
Flax, hemp, jute, etc., raw	10,395,254	11,377,945
Flax, hemp, jute, and mfres of	21,388,420	23,681,585
Fruits and nuts	14,429,201	13,724,134
Hides and skins	15,919,896	31,826,397
India rubber (crude)	11,579,742	15,547,255
Iron and steel, and mfres of	17,663,264	21,671,161
Silk, raw	10,868,738	21,690,788
Silk, mfres of	18,945,839	27,556,281
Sugar	88,879,800	62,622,024
Tea	8,117,631	10,304,389
Tobacco, leaf, and mfres of	10,745,554	14,710,150
Wood, and mfres of	16,830,222	17,002,270
Wools, raw	16,865,126	29,035,341
Wools, mfres of	33,047,775	52,323,534

Of the seventeen leading items of import during the ten months' period, it will be seen only three, namely, sugar, chemicals and drugs, and fruits and nuts, showed an increase in 1896 over the preceding year. Sugar imports gained over $26,000,000, and fruits and nuts about $700,000, while chemicals increased over $1,000,000. On the other hand, imports of coffee, which, next to sugar, are the largest import, fell off $18,000,000; hides and skins fell off about $16,000,000, or more than one-half, and raw silk over $10,000,000, or about the same proportion. Raw and manufactured wool fell off respectively $12,000,000 and $19,000,000. It is a feature of interest in connection with the sugar imports to note that our imports of beet sugar were nearly $26,000,000 in value this year, or almost five times the total value of the imports in 1895. The heaviest portion of this immense increase, it is further to be noted, came from Germany. Our cane sugar imports increased largely, owing to much larger takings from the Hawaiian Islands, the East Indies, and, in fact, from nearly every section of the globe except Cuba, the imports from which fell from nearly $34,000,000 in 1895 to only about $10,000,000 in 1896; or, in other words, Cuban shipments of sugar to this country in 1896 were only about one-third those in 1895. But, in spite of the heavy falling off from Cuba, due to the revolution there, that there should have been an actual gain in our imports of $26,000,000 is the best testimony to the fact that the key of the sugar situation is not held by Cuba. The decrease in imports of tobacco and manufactures thereof is also attributable mainly to a falling off in Cuban shipments. It is, of course, not to be forgotten that decreases in imports have not been confined to the important lines above enumerated. The receipts of foreign coal, cocoa, cotton goods, jewelry, leather, oils, rice, salt, seeds of all sorts, spices, tea, tin and wines, all showed heavy decreases. It might be noted that this year, instead of importing large quantities of flaxseed, the United States has become an actual exporter, and, further, that the falling off in imports of iron and steel is traceable entirely to the decreased demand for British tinplates in this country. Among less important items which showed gains may be mentioned Egyptian cotton, earthenware, and a few other less important imports.

Our export trade is particularly satisfactory in that, as compared with 1895, nearly every class of exports show gains. Bread-

stuffs exports increased for the ten months' period nearly $40,000,000, raw cotton exports $25,000,000, provisions $4,000,000, and other classes of exports in proportion. The following table shows the more important exports during the ten months' period of this year and last.

Exports.	1896.	1895.
Animals, live	$31,154,668	$21,973,012
Breadstuffs	140,294,772	100,347,842
Corn	35,196,475	21,061,625
Oats	6,128,071	487,308
Wheat	43,059,073	33,108,226
Wheat flour	45,442,268	41,461,303
Coal and coke	9,229,441	8,946,737
Copper and mfres of	22,733,505	11,044,806
Cotton, raw	153,634,421	128,071,917
Cotton, mfres of	16,772,816	11,467,447
Iron and steel and mfres of	38,957,645	28,149,031
Leather and mfres of	15,786,285	15,613,403
Oils, mineral, refined	47,979,516	40,620,391
Oils, mineral, crude	5,028,702	5,049,760
Provisions	111,383,187	107,596,631
Tobacco, leaf	20,511,028	21,889,956
Wood and mfres of	29,125,942	24,229,630

Exports of corn, it will be seen, increased $14,000,000 over a year ago, those of wheat $10,000,000 and those of flour $4,000,000. Exports of live animals and oats also show large gains. While our exports of agricultural produce have shown noteworthy gains, however, it is interesting to note that the products of our manufactures have been seeking a market abroad with apparent success. Our exports of coal and coke slightly increased over a year ago, those of copper and manufactures thereof actually more than doubled, while our manufactures of cotton goods showed an increase of over $5,000,000, iron and steel over $10,000,000, refined petroleum $7,000,000, and wood and manufactures thereof about $5,000,000. It is also of interest to note that the less important items of export have shared to the full extent in this movement. Flaxseed, hitherto largely imported, naval stores, hides and skins, fruits and nuts, and oil-cake and meal, all show gains. Perhaps the most notable increase of all, however, is that shown in a comparatively new industry as regards exports, namely, the shipments of bicycles, which increased from only $158,000 total value in 1895 to $3,080,000 total value in 1896.

AUSTRALIAN INTERESTS.

EXTENT OF THE NEW WHEAT CROP SHORTAGE.

AN INCREASED YIELD OF WOOL AND OUTPUT OF GOLD.

GOLD REMITTANCES TO THE UNITED STATES MADE TO LESSEN THE PRESSURE ON THE BANK OF ENGLAND.

NO GENERAL BUSINESS IMPROVEMENT.

Melbourne, November 20.—The season is now sufficiently advanced to permit an estimate of the approaching wheat harvest in Australia being formed with a tolerable degree of accuracy. By the term Australia is meant the five colonies on the mainland, the colonies of Tasmania and New Zealand falling under far different climatic conditions. Of the five Australian colonies, two (South Australia and Victoria) are able to export in normal seasons, part of their surplus going to other colonies and part to Europe, principally France, where the Australian white wheats are prized. A third colony (New South Wales) grows on the average about two-thirds of its requirements. The other two colonies (Queensland and Western Australia) produce next to no wheat and have to depend for their breadstuffs upon importation.

This season the experience will be very similar to that of last season, the great drouth cycle not having come to a close. It is now two years since the principal wheat-growing areas of South Australia and Victoria were visited by a soaking rain which reached the subsoil. The seedbed of the present harvest was, however, prepared under favorable conditions in April and May last, but the necessary rainfall did not come. The result is that South Australia will not reap more than sufficient wheat to supply her own requirements, and, as a matter of fact, Adelaide merchants have already drawn upon the very meager stocks of the adjoining colony of Victoria, offering better prices than the Melbourne merchants, and they are, moreover, making arrangements to import from San Francisco. Victoria will have something over half an average crop, reaping about five bushels per acre. The New South Wales crop will show a falling off, necessitating importation. The requirements of the five colonies and probable yields are summarzed as follows :

	Food, bushels.	*Seed, bushels.*	*Total, bushels.*
Victoria	6,500,000	1,500,000	8,000,000
New South Wales	7,000,000	600,000	7,600,000
South Australia	2,000,000	1,000,000	3,000,000
Queensland	3,000,000	30,000	3,030,000
Western Australia	750,000	20,000	770,000
Total requirements			22,400,000

	Probable yield, bushels.	
Victoria	7,000,000	
New South Wales	4,500,000	
South Australia	3,000,000	
Queensland and Western Australia	250,000	
		14,750,000
Deficit		7,650,000

The deficit exceeds 200,000 tons (long tons of 2,240 pounds), and all this must be taken from San Francisco unless it be found practicable to bring wheat from the Black sea or unless New Zealand should have something to spare. It is too early to estimate the New Zealand harvest, but climatic prospects are reported as favorable. The area is not, however, a large one.

The partial failure of the Australian wheat harvest will also create a larger demand for San Francisco flour in the eastern countries and South Africa, which for several years prior to 1895 were taking increased quantities from Australian millers. In short, San Francisco's exports of breadstuffs to Australia, Asia and Africa for 1896–97 are likely to aggregate from 350,000 to 400,000 tons. The Australian portion of this trade is likely to remain centralized at Sydney, the capital of New South Wales, which is best situated as regards San Francisco as well as for distribution. Shipments may, however, go direct to Melbourne, Adelaide and Brisbane.

The drouth continues to affect many of the sheep stations in the interior, and the death of stock by starvation is still on a very large scale. The rabbits in many districts having destroyed the grass roots, have taken to living on the bark of trees and shrubs, and this source of sustenance is now failing them. Traveling in the interior is dangerous, owing to the desert-like condition of affairs, unless camels are employed. The wool clip from the back stations will be extremely light. On the other hand, an improvement, as compared with last year, in the weight of wool received from the stations in the best regions is noticeable, and the outlook is that the total Australian clip of 1896–97 will not fall short of that of 1895–96, and may possibly exceed it. Concentration of effort in the districts most favorable to wool growing is attended with far more profit nowadays than the taking up of new country. The wool sales now being held in Melbourne and Sydney are proceeding favorably, competition generally being exceedingly brisk, while prices are firm. As soon as the result of the presidential election became known, American buyers operated freely, and a great deal of freight space (for transshipment at London) has been taken up for their purchases. The English buyers have also been very active, a heavy demand for Yorkshire fabrics for the United States being anticipated. French and German buyers have shown less eagerness than in former seasons. The course of the market will be largely influenced by the results of the next London series of wool sales, to open on the 24th instant.

The gold-mining industry continues to be developed, the output in every colony showing increase. For the first ten months of the year the two Australian mints have received for coinage 1,616,983 ounces, against 1,562,452 ounces for corresponding period last year, the degree of fineness of the gold being indicated by an average mint value of £3 16s. 7d. per ounce. In addition a considerable quantity of uncoined gold, say between 200,000 and 300,000 ounces (but the details are not at present available) has been shipped. The Westralian gold fields are slowly increasing their output, the total export for the first ten months of the year being 220,737 ounces. It will be some time before the enormous quantity of machinery purchased will be erected, and some two years may elapse before the industry is properly developed. What the annual output will ultimately be is a matter of conjecture, but some sound experts talk of 1,000,000 ounces. It is to be feared, however, that of the vast number of flotations of Westralian mining ventures made in London not more than 5 per cent. will prove successes. The share market, excepting in a few stocks, has virtually collapsed. London quotations have been falling almost daily, and Melbourne and Sydney are giving no support to the market. Severe losses will fall upon English investors who have taken up ventures grossly over-capitalized and yet inadequately supplied with working capital. In New Zealand there is also less activity, so far as the share market and floating new mines are concerned. But the public are committed to a heavy expenditure for developing gold mines in both New Zealand and Western Australia, and a factitious help is thus extended to trade.

The three previous mail steamers (four-weekly) have taken in all £1,350,000 in sovereigns to San Francisco, and the steamer which carries this contribution is expected to take further remittances. These gold shipments, it should be remarked, have nothing to do with the exports of breadstuffs from San Francisco to Australia. They have been arranged in London purely to lessen the pressure upon the Bank of England reserve exercised by the American demand for gold, and the Australian banks have sold at a profit of ¼ per cent. In selling they exercised their own discretion entirely, and with £28,000,000 in gold lying in their vaults they could easily aid in an operation the ultimate effect of which is to transfer a portion of their funds to London at a considerable exchange profit.

The Australian outlook does not, on the whole, show improvement. The loss to the agricultural interest from drouth is serious, and it must be confessed that agriculture is generally in a stagnant condition throughout the colonies. As regards pastural productions, wool growing, notwithstanding the present firmness of the market, is not lucrative. Low prices for tallow and frozen meat also militate against the graziers and the sheep farmers, the rise in hides not affording much compensation. Mining pursuits are, however, active, and are year by year assuming more breadth. Next to the flocks and herds, the gold, silver, lead, copper and tin mines of Australia add most to the national wealth. The import trade of the colonies has latterly shown expansion, but this has been due to the great influx of British capital occasioned by mining flotations.

THE INTERSTATE COMMERCE COMMISSION'S REPORT.

Such a variety of subjects are covered in the annual presentation to Congress of the work of the national Interstate Commerce Commission that it is impossible, even in a condensed form, to refer to more than a few of the points of interest. As usual, the commissioners occupy considerable space with references to the defects in the law, particularly those which have been brought out by recent decisions of the United States Supreme Court. In one case the final judicial authority has upheld the law and fortified it in a very important particular by deciding that the Interstate Commerce act applies to the whole field of commerce, excepting only commerce wholly within one state, thus definitely settling the question what carriers and transportation are subject to the provisions of the statute and the jurisdiction of the commission. It was also assumed by the court that a valid complaint may be made to the commission by trade organizations, commercial bodies and the like, without charging loss or damage to individual persons or corporations. This right, in the opinion of the commission, is manifestly essential to any adequate scheme of government regulation.

It is, however, a fact that in the very case through which these principles have been affirmed by the Supreme Court of the United States, known as the "Import Rate Case," the rulings of the commission were not sustained. While the Supreme Court did not sanction the great difference in rates on import and domestic traffic shown to exist in this case, it nevertheless negatived the general rule assumed to exist by the commission in its decision of like charges for like service in transportation between the same points for both home and foreign goods of similar description. The commission held that under such circumstances the movement of foreign commerce before reaching our own country could not be considered as furnishing a reason for lower charges on imported goods by our railroad lines than their rates for the same service in the case of domestic goods. The Supreme Court (three of its members dissenting) decided that this view was erroneous, and held that all the conditions, including ocean competition from foreign ports to those in the United States, should be considered by the commission. The latter body in its report says: "We have quoted at some length the divergent views expressed in this case, not with any desire to criticise the decision or to indicate doubts of its legal correctness, but for the purpose of directing attention to the magnitude of the subject and the apparent need of further legislation."

The report also refers at length to the Supreme Court decision in what is known as the "Social Circle Case," involving the old question as to the long and short haul, and the definition of the word "line," where the same is made up of the roads of different carriers. Another matter of great importance was the "Brown Case," relating to the liability of railroad officials to be obliged to testify under the amendment of 1893 to the Interstate Commerce law in

cases of violation of the law, despite the fact that such testimony might incriminate the witness himself. The decision of the Supreme Court in this matter has strengthened the law in an important particular, and of it the commission says: "It seems to have effectually removed the embarrassments hitherto encountered in obtaining the testimony of unwilling witnesses in penal cases, and under it and the ruling of the Supreme Court in 1894 in the Brimson case little difficulty is now experienced in securing the attendance and testimony of such witnesses in proceedings before the commission. Prior to this decision it was impracticable in most cases to secure conviction, but now, when any party to a criminal transaction can be forced to give evidence against his fellow wrongdoers and is under inducement to do so because of resulting immunity to himself, there seems to be no special difficulty in convicting transgressors under this statute." Moreover, it is to be noted that the commission opposes the abolition of punishment by imprisonment as now provided by the law. Reference is also made in the report to other minor decisions of the courts upon cases originating in connection with the Interstate Commerce law and to the cases pending before the courts, including the one in which the legality of the Joint Traffic Association or trunk-line agreement is under examination, and which, after a decision by the Circuit Court of the New York district, is now progressing before the Circuit Court of Appeals.

Referring to cases pending in the courts, the report shows that there are now twenty-two cases to enforce orders of the commission and sixty-four mandamus proceedings to compel carriers to file annual reports with the commission. Criminal proceedings under the act have been instituted during the year in New York, Kansas and Pennsylvania, and others are pending in Illinois and Wisconsin. The indictments in these cases were for unjust discrimination in rates, charging less than established rates, and for false billing.

In connection with its routine administrative work, the commission refers to the failures of companies to file copies of their rate schedules, and to the order of the commission made about a year ago requiring that schedules should be numbered consecutively, which, it is stated, has had a good effect. The rate sheets of the carriers are, however, often so complex as to be unintelligible to the public. The commission asks authority to not merely prescribe the form of these schedules, but also to control the contents and arrangement thereof. Many requests are received from shippers and carriers for information set forth in tariffs, reports and other documents required to be filed with the commission, and this feature of the service is of great value to the public.

A fact in relation to the practice of the commission, which is of great interest and advantage to shippers, is also stated. It is that the procedure follows in investigating grievances stated in letters from shippers or consignees continues to operate successfully. When formal proceedings are necessary, a draft of petition setting out the facts claimed to exist and containing appropriate allegations is prepared in the office of the commission and transmitted to the complaining party for his examination. Under this practice delays are avoided, the procedure is simplified for the shipper, and much of the reluctance on the part of business men and producers to proceed against a large corporation is removed.

The portions of the report referring to railway associations, to general orders by the commission, and to certain questions of great importance developed in proceedings now or lately before it are also well worthy of detailed examination. The same is to be said of the formal recommendations made to Congress for the amendment of the Interstate Commerce law.

DISSATISFACTION IN LONDON'S MINING MARKET.

While the London mining market during the past fortnight has witnessed a better speculative feeling in regard to mining securities, and particularly toward those of the South African variety, there appears to be a good deal of dissatisfaction. The actual industry of the "Rand" is certainly in fair shape. The amount of gold produced during November, as reported by the Johannesburg Chamber of Mines, shows an increase compared with the returns for October or for November of last year. The figures for the month in question are 201,000 ounces, as against 199,000 ounces in October and 195,000 ounces in November, 1895.

The discontent of the British public with mining securities, and the habitual management of South African and other mining companies, is of a twofold description. It is alleged that the prices for their securities are made at Johannesburg, where the speculative talent which a year ago was busily employed in organizing for and preparing deals and claims to be foisted off on the British public, is now exercised with schemes to drive down prices and cause further alarm to the confiding capitalists of the mother country. In other words, the Johannesburg market is bearish, and while there has been improvement in the actual state of the industry as compared with the earlier months of the year, the market takes no notice of the fact, but responds to every improvement by a further decline in current quotations. On the other hand it is pointed out that while a majority of the shares of many companies are held in Europe, the meetings are held in South Africa, where only the friends of the directors attend, that information is withheld or furnished only in a misleading form, and that combinations or large interests play with the properties for speculative or political objects and in entire disregard of the security holders. In short, to quote one of the critics of South African mining managements, "the worst malpractices that have brought discredit on American railroad management are unblushingly perpetrated." This last remark comes from an authority of no small weight in the London market, which in late years has warmly supported the African mining market and has consistently taken an adverse position toward a revival of British interest in "Americans." It is therefore worthy of attention to find that the chief people in the mining industry that has played such an overshadowing part in London's financial and speculative situation for several years past should at last be accused of the policy and methods that London proverbially associates with corporations in this country.

As a cure for the evils complained of, it is recommended that shareholders should combine, in cases where it is alleged that their rights are disregarded by the local management, and that representative committees in London should bring the offenders to book and insist on the substitution of other methods in place of those which are complained of.

The immediate interest of all this is that it points to the change that is going on in speculative sentiment in London towards American securities. There is scarcely any doubt that the development of the South African mining industry and the erection of huge superstructures of speculation thereon at a time when our financial, currency and business affairs made a bad position for the securities of our railroad corporations, brought interest abroad in the latter to the lowest possible ebb. The present developments point to the fact that since our presidential election was decided attention to Americans on the part of the British financial and speculative public has been growing steadily, although the prevalence of high rates for money and the liquidation in the money market have been obstacles to tangible developments in that connection. It was indeed a favorite theory with those writers and financial journals in London which have favored the South African mining inflation to point out that the British investor was not subjected to the mismanagement that characterized American railway corporations nor to the adverse speculative manipulation of Wall street. The sequel shows, however, that as far as the Wall street market is concerned it can teach nothing to the bears of the Johannesburg Stock Exchange, while in point of mismanagement and disregard of the interests of the outsider the South African Company director is no improvement on transatlantic models of the worst type.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

In his latest issued circular Ellison, of Liverpool, attributes the recent weakness and decline in cotton as much to disappointment at the failure of the expected "boom" in trade, incidental to McKinley's election, to materialize as to the heavy receipts and increased crop estimates. Much of the buying previous to election, he thinks, was based upon the expectation that an advance was bound to occur as the result of the election. That the market was "long" rather than "short," he thinks, was proved by the dullness and inactivity, finally leading to slow liquidation, accentuated later on as the movement of actual cotton continued of large volume. That the outlook is, on the whole, a good one is, however, claimed by Ellison, who says: "In the meantime the position of cotton on its own merits is by no means weak. The American crop is not likely to exceed the requirements of consumers."

The British consul at Sofia, in his report on Bulgaria for 1895, says that the government is displaying great activity in developing the railway system of the principality. The difficult and expensive operations in connection with the construction of the Sofia-Roman section of the line, which will eventually place the capital in direct communication with Rustchuk and Varna, have been carried on with great energy, and it is expected that the section will be completed before the end of this year. The remaining section, Roman-Plevna-Shumla (200 miles), has been contracted for, as also that from Pernik to Radomir (9 miles), which will eventually be prolonged to the Macedonian frontier. The former of these two lines is to be completed in three years and the latter in the course of 1896, the contractors in both cases being Bulgarians, who have undertaken the construction at nearly $25,000 per mile, an estimate which Mr. McGregor thinks will probably turn out much too small.

CURRENT BUSINESS NEWS.

Industrial.

Over four hundred employees have been forced out of work by the failure of the Phœnix Woolen Mills of East Greenwich, R. I.

Fires have been started under the glass furnaces owned by Swindell Brothers and King Brothers at Westport, Md., thereby giving employment to more than 100 men, and it is announced that the works of the Baltimore Glass Manufacturing Company of the same place will resume operations after January 1. The concern will emply 300 men.

In consequence of the declination of the Bellaire Steel Company to rejoin the steel billet combination, the latest conferences of steel manufacturers in New York city came to an abrupt close Tuesday. The committee on compromise was unable to make a satisfactory report, and although the steel men were reticent, they made no effort to conceal the fact that the situation was not pleasing. The assertion was made that the demoralized condition of the steel market could not be improved unless all important interests agree. At present each manufacturer is at liberty to fix his own prices, and nobody can obtain more than $17 a ton for billets.

Four thousand men, who claim to be out of work and on the verge of starvation, met in Denver, Col., recently, and adopted resolutions calling on the city council to provide for public works to keep the unemployed busy.

The strike of the bituminous coal miners in Indiana was ended on Saturday, the men accepting 55 cents a ton.

A canvass of twenty-five Grand Rapids, Mich., furniture factories shows that since the "election there has been a revival of business in all lines of furniture making in this city, and that in fifteen of them there has been an increase of 1,215 men. Reliable reports from thirty-five other factories making furniture and furniture supplies show revival in special work and an increase of employees."

Three hundred men employed in the Aragon mine, at Norway, Mich., went out on strike this week because they were refused an increase in wages of 10 per cent. The request for the increase was made because the Penn Iron Mining Company, of Vulcan, were paying the wages asked for by the strikers.

The new plant of the Mathieson Alkali Company, to be erected at Niagara Falls, will consist of several buildings covering two acres. The first section is to be completed by January 15, 1897. The company, which, as is well known, manufactures caustic soda by the Castner process, will employ 150 men and use 2,000 E. H. P. at its new works. It already has large plants in England, and at Saltville, in Virginia. At the latter plant no water power is available. A very complete electric plant for the chemical process and for lighting is installed, Westinghouse apparatus being used.

Commercial.

The following extract from a circular letter sent out by one of the most prominent men in the trade last week will prove of special interest to those who are called constitutional bulls on wheat: "There are only three points in this country that have any stocks of wheat to amount to anything. First, New York, and we understand that is all owned, practically, by the local mills who will use it for grinding before the opening of navigation in the spring, or it is sold to exporters who are liable to ship it out at any time during the next few weeks. Next, the Minneapolis stocks, which, taken together with the reserves back in the country, will not be enough to run the Minneapolis mills to their usual capacity. Third, the stock of wheat in Chicago. This in Chicago will all be wanted by the mills east of Chicago, although it may take them four or five months to use it all up; now, if the foreigners come in and buy that wheat before the mills want it in the east for actual consumption they may be able to get a part of it. Outside of that stock, I do not see where the foreigners are going to get any more wheat in this country, except what they have already purchased to be shipped out."

A letter from Mr. Frederick Mottet, president of the Tacoma Chamber of Commerce and Board of Trade, dated December 10, states with reference to the state of Washington: "With our resources of forests, coal, iron and precious minerals; of waters teeming with fish, and with numberless acres of land yielding a bountiful harvest of food products—each of these varied interests having representatives in the legislature who will undoubtedly work toward their further development—and with the increasing demand for these products from China, Japan, Australia, Central and South America, South Africa and Europe, as well as our own land, together with the increasing prosperity already manifesting itself throughout the United States, we sincerely feel and believe that at no period of our history as territory or state has the prospect for legitimate business and investment ever been as favorable as it is at this time."

The Baltimore Board of Trade has adopted resolutions deploring the action of the Senate Foreign Relations Committee on the Cameron resolution.

The semi-annual meeting of the Tin Plate Manufacturers' Association of the United States was held at Pittsburgh on December 22. About twenty-five members were in attendance. It was decided to maintain existing prices, and that a committee should be appointed to meet with the jobbers whenever the latter were ready to confer on concessions which are desired.

Operations on the Stock, Cotton, Produce, Coffee and Consolidated exchanges of New York city were suspended on Thursday and will not be resumed until Monday morning. The Mercantile Exchange was closed yesterday, but will reopen to-day.

Financial.

These securities, among others, were sold at auction this week in New York:

$5,000 Cahaba Coal Mining Company 6 per cent. guaranteed bonds	85
$250 Second mortgage bonds of German Association of Erheiterung	1
4 Shares Staten Island Academy	15
14 Shares Ninth National Bank	115
41 Shares Clinton Bank	90
25 Shares Eagle Fire Insurance Company	240
$5,000 Galveston, Houston & Henderson Railroad 1st mortgage 5 per cent. bonds	79
15 Shares New York Loan & Improvement Co.	43
100 Shares Mount Hope Cemetery Ass'n.	$5 per share

The Wells-Fargo Company has declared a semi-annual dividend of 3 per cent., payable January 15.

At a meeting of the Clearing House Association it was decided to raise the annual fee charged non-members participating in the Clearing House through members from $200 to $500. The new rate begins January 1, 1897.

At a special meeting of the shareholders of the Commercial Cable Company, held on Tuesday, the plan for unifying the interests of that company and the Postal Telegraph-Cable Company was unanimously adopted. The plan, which goes into operation on January 1, provides for the issue of $20,000,000 of bonds, $15,000,000 of which is to be paid for the plant, etc., of the Postal Telegraph-Cable Company, and $5,000,000 is to be used for the extension of telegraph lines. The bonds will draw 4 per cent. interest, payable in gold quarterly. To provide for the small investors, the registered bonds will be of the denomination of $100 and upward. A special meeting of the shareholders of the Postal Telegraph-Cable Company, also held Tuesday, ratified the plan.

The governing committee of the New York Stock Exchange have dropped the following securities from their list: Colorado Midland first mortgage 6 per cent. of 1936 and consolidated mortgage 4 per cent. of 1940. The certificates of deposit for both will remain on the list. Baltimore & Ohio Southwestern first, second and third preferred income bonds. The bonds have been nearly all retired by the reorganization committee. Certificates of deposit for James River Valley first mortgage bonds. Chicago, Burlington & Northern 6 per cent. debenture bonds of 1896. The bonds matured on December 1, 1896. Certificates of deposit for Oregon Improvement Company consolidated mortgage 5 per cent. bonds issued under the "Preliminary Agreement." Hereafter only the certificates of deposit issued under the "Agreement of Reorganization" will be dealt in.

The National Bank of Illinois, of Chicago, failed to open its doors Monday, as a result of the action of the Clearing House Association in suspending the bank from membership. The Comptroller of the Currency appointed a temporary receiver for the institution. The liabilities amount, it is said, to $11,000,000. The failure was followed by that of the Chicago banking firms of E. S. Dreyer & Co., whose liabilities are $1,500,000, and Wasmansdorf & Heinemann, liabilities $416,000, and of the Roseland Savings Bank, of Roseland, Ill. "It is said that the failure of the National Bank of Illinois is due to injudicious, reckless and imprudent methods followed by the officers."

As a result of a mail vote of the members of the American Bankers' Association, the tenth annual convention of the association will be held at Detroit in August, 1897.

The Bank of Minnesota, of St. Paul, was closed Tuesday by the state bank examiner. The Union Stock Yards Bank, in South St. Paul, a branch of the Bank of Minnesota, also closed. "The failure was caused by the bank's inability to make collections."

The United States Rubber Company has declared a dividend of 2 per cent. on its common stock, payable February 15.

The Pennsylvania Coal Company has declared an extra dividend of 5 per cent. in addition to the regular dividends for 1896.

The Metropolitan Traction Company has declared a quarterly dividend of 1¼ per cent., payable January 15.

The National Wall Paper Company has declared a quarterly dividend of 2 per cent. on its debenture stock, payable December 31.

The Central & South American Telegraph Company has declared a quarterly dividend of 1¾ per cent., payable January 6.

The Mexican Telegraph Company has declared a quarterly dividend of 2½ per cent., payable January 13.

Railroads.

The New York Central & Hudson River Railroad Company has declared a quarterly dividend of 1 per cent., payable January 15.

The Lake Shore & Michigan Southern Railroad Company has declared a semi-annual dividend of 3 per cent., payable February 1.

The Michigan Central Railroad Company has declared a semi-annual dividend of 2 per cent., payable February 1.

The Canada Southern Railroad Company has declared a semi-annual dividend of 1 per cent., payable February 1.

Railroad construction in the south for 1896, as compiled by the *Manufacturers' Record*, shows the building of nearly 600 miles of standard gauge road. All of the southern states but one have increased in mileage, and the construction has been more generally distributed over the entire section in the past. A notable increase has occurred in Mississippi, Georgia, Arkansas and Louisiana. The extension of the Kansas City, Pittsburgh & Gulf, the completion of the Gulf & Ship Island, requiring fifty-four and a half miles of new line, the completion of the Florida East Coast line (sixty-seven miles) and the extensions of the Texas Midland added largely to the new mileage, but much of it comes from the construction of short independent lines and branches, varying from ten to twenty-five miles in length.

It has been decided by the board of directors of the Little Schuylkill Railroad Company to accept the proposition of the Philadelphia & Reading Railroad to lease its line at 5 instead of 7 per cent.

The annual statement of construction to be published by the *Railway Age* this week will show that during 1896 only 1,802 miles of railway lines were built in the United States. This is one mile less than the total reported for 1895, and is the smallest mileage built in any year since 1875. The number of lines on which this track was laid is 163, which is eleven less than the number of new lines added to in the previous year. Track was laid in thirty-eight of the forty-nine states and territories. The longest mileage was built in California, 187 miles on eight lines.

A Terre Haute dispatch says that the receiver of the Vandalia system has taken steps for a radical reduction in expenses. The position of general superintendent has been abolished. The salaries of officials and clerks have been reduced from 15 to 33½ per cent., and a number have been dropped. The receiver says that the train service men will not be affected.

The all-rail east-bound shipments of dead freight from Chicago last week were 63,330 tons, against 58,357 tons the previous week and 90,577 tons the corresponding week of the previous year.

The Chicago & Northwestern Railroad Company reports gross earnings for November of $2,478,833, a decrease of $608,534 as compared with the same month of last year.

An order has been placed with the Richmond Locomotive Works by the Cleveland, Cincinnati, Chicago & St. Louis and Chesapeake & Ohio railroads for six locomotives, each to cost in the neighborhood of $11,000.

The St. Joseph & Grand Island Railroad was sold under foreclosure at Hastings, Neb., for $2,000,000, to a representative of the first mortgage bondholders.

The Lake Shore & Michigan Southern reports for the year ending December 31:

	1896.	1895.	1894.
Gross	$20,205,932	$21,015,035	$19,557,870
Operating expenses	13,823,594	14,568,220	13,186,069
Net	$6,382,338	$6,447,815	$6,371,801
Charges	3,360,000	3,419,500	3,402,862
Balance	$3,022,338	$3,028,315	$2,968,939
Dividend	2,967,990	2,967,990	2,967,990
Surplus	$54,348	$60,325	$949

Net in the corresponding quarter in 1893, $6,562,019.

The New York Central reports for the quarter ended December 31:

	1896.	1895.	1894.
Gross	$11,730,396	$12,407,896	$11,318,228
Operating expenses	7,926,178	8,443,635	7,378,955
Net	$3,804,218	$3,964,261	$3,939,270
Charges	2,637,490	2,647,952	2,627,462
Balance	$1,166,728	$1,316,308	$1,311,808
Dividend	1,000,000	1,000,000	1,192,854
Surplus	$166,728	$316,308	$118,954
for six months:			
Gross	$23,000,295	$24,008,401	$22,159,050
Net	7,477,349	7,819,242	7,665,333
Surplus	212,771	540,740	22,011

The Michigan Central Railroad Company reports for the year ending December 31:

	1896.	1895.	1894.
Gross	$13,818,000	$13,651,000	$12,584,031
Operating expenses	10,355,000	10,183,000	9,144,107
Net	$3,463,000	$3,468,000	$3,439,904
Interest and rentals	2,396,000	2,402,000	2,401,184
Surplus	$1,076,000	$1,067,000	$1,038,720
Prog. to Mich. Central	771,000	761,000	750,912
Total income	811,000	820,000	795,561
Dividends	749,520	749,520	749,520
Balance	$61,480	$60,480	$46,041

The Canada Southern share of the Michigan Central earnings is:

	1896.	1895.	1894.
Prop. to Canada Southern	$296,000	$304,715	$287,808
Total income	298,000	323,375	295,221
Dividends	337,500	375,000	375,000
Deficit	$39,500	$51,625	$79,799

The following roads report gross and net earnings for the month of November:

NOVEMBER.

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Allegheny Valley	$176,996	$234,260	$53,820	$89,691
Cin., New Orl. & Tex. Pac.	280,248	347,750	101,500	108,031
Gadsden & Attalla Union	827	938	382	461
Nash., Chatt. & St. Louis	403,768	491,701	151,680	184,383

Pitts., Young. & Ashtabula	98,864	147,868	30,873	64,077
West Va. Cent. & Pitts	91,530	104,748	30,224	34,581
Wrightsville & Tennille	6,289	7,520	4,450	3,195

Miscellaneous.

The suit brought against the Central Elevator Company by the Illinois attorney-general to restrain the company from dealing in grain was decided by Judge Tuley, in Chicago, Tuesday, in favor of the state. The court held that by dealing in grain or mixing its own holdings of grain with that stored with it, in its capacity as an elevator company, the Central Company exceeded the legal scope of its authority, license or charter. This was a test case, and other elevator companies are affected.

Foreign.

Millers' congresses have become an institution in Russia, which is ambitious of utilizing its great cereal resources in the manufacture and export of flour. The first meeting of this kind dates back about six years ago, but since then more than one congress has been held. The latest meeting was to take place on the 15th inst. in St. Petersburg under the auspices of the Russian Millers' Association.

A Reuter telegram says that the Austrian Minister of Commerce, in the lower House, has intimated the intention of the government to introduce bills on the subject of "time bargains" (futures), especially in wheat.

The *Mexican Herald* says an American syndicate has purchased the Hidalgo Railroad for $2,500,000 in gold and has paid down $25,000. The line is a narrow gauge, and runs from this city to Pacahua, and it is proposed by the new owners to extend the line down the coast to Tuxpan.

The exports of wheat and flour to Europe for eighteen weeks following August 18 are given as follows:

	—Quarters—		
	1896-97.	1895-96.	1894-95.
America and Canada	7,381,000	4,855,000	6,425,000
Russia	5,374,000	5,467,000	5,905,000
Roumania and Bulgaria	1,730,000	3,685,000	1,460,000
India	90,000	755,000	492,000
Argentina	164,000	120,000	1,205,000
Australia	...	10,000	210,000
Sundries	735,000	780,000	710,000
Totals	18,474,000	15,672,000	16,407,000

Beerbohm adds: "It will give some idea of the enormous movement of wheat this season when we say that the average shipments since August 1 have reached 1,036,000 quarters per week, against 870,000 quarters last year. It is this plethora, so to speak, which the market is now suffering from, a condition of things, however, which should soon change now that both American and Russian shipments are likely to be falling off."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Married Woman—Lease.

The Supreme Court of Indiana held, in the recent case of Forgy vs. Davenport, that a woman holding land which she acquired by virtue of a first marriage, and having children by such marriage, may execute a valid lease of such land for the term of her natural life while living with a second husband, provided he joins her in executing it, and that such a lease is valid where the consideration is a single payment of money made when the lease is executed.

Railroad—Grant—Forfeiture.

The Federal Supreme Court this week decided in favor of the government in its suit against the Oregon & California Railroad Company to recover possession of the lands within the northeast quadrant of the circle of which Forest Grove, Ore., is the center within a radius of twenty miles, which were originally granted to the Oregon Central Railroad Company and forfeited by act of Congress for failure to complete the line as proposed.

Bank—President—Authority.

The Supreme Court of Indiana held, in the recent case of First National Bank vs. New, that the president of a bank may be granted authority to bind the bank in matters outside of its customary business; that the existence of facts which constitute a holding out and warrant the public in believing that he has authority to act in the particular matter will enable him to bind the bank by his acts, and that where the president of a bank agreed with one who signed a note as surety that upon assigning a certain judgment to the bank he should be released, and the judgment was afterward assigned by him and accepted by the bank, and the note was then filed and allowed as a claim against the maker's estate and never afterward treated by the bank as an asset, the note cannot be collected from the surety by one who purchased the entire assets of the bank from its receiver.

Mercantile Agency—Statement—Rating.

The Supreme Court of Georgia held, in the recent case of Treadwell vs. The State, that though a merchant makes to a mercantile agency a statement in some respects false, to be used in giving him a rating, which he knows is intended to be used by others as a basis for determining whether or not credit will be extended to him, yet, where no credit is actually extended until after the lapse of a considerable period, such, for instance, as sixty days, the person extending the credit and parting with the possession of his goods in pursuance thereof cannot assume that the statement is still operative, unless the person credited expressly reaffirms the truth of the statement, or at least knows, or has reason for believing, that he is obtaining the credit on the faith of the representations made in the statement, and, by remaining silent, misleads the other party.

Account Books—Production—Evidence.

The Supreme Court of Georgia held, in the recent case of The American National Bank of Macon vs. Brunswick Light & Water Company, that where a notice in writing has been duly served upon one of the parties to a pending cause to produce at the trial certain books of account and other books, the contents of which were obviously pertinent to the issues involved, and in response to such notice only a single ledger was produced, the mere fact that there was some testimony in behalf of the party producing it to the effect that a certain balance brought forward in the ledger from a prior ledger covered by the notice was correct, would not dispense with the necessity of producing such prior ledger and all the other books covered by the notice, the contents of which would illustrate the correctness or incorrectness of the balance in question, and that where there were financial dealings pro and con between a corporation and one of its salaried officers, but there never was a time when, upon striking a balance between them, there would be anything due from the corporation to the officer, a garnishment served upon the corporation at the instance of a creditor of the officer could not be made effectual for the purpose of subjecting any portion of the latter's salary to the payment of the creditor's claim against him.

Note—Fraud—Comity.

The Kentucky Court of Appeals held, in the recent case of Clark vs. Tanner, that false representations by the vendor of town lots as to public improvements to be made in the town by others do not constitute a defense to an action for the purchase price unless the vendor had means of knowing or actual knowledge on the subject of prospective improvements that the vendee did not have nor by exercise of ordinary diligence could have acquired; that as the note sued on was by the statute of Tennessee, where the contract was made, put upon the footing of an inland bill of exchange, it was to be so regarded in Kentucky, and therefore the fraud, if any, of the original payee did not affect the right of recovery, the plaintiff being a bona fide holder without notice of the alleged fraud, and that, while generally speaking, the validity of a contract is to be decided by the law of the place where it is made, yet this is not of right but of comity, and comity does not require that this court should treat as valid a stipulation in a note to pay a "reasonable attorney's fee" in the event of litigation, although such a stipulation is enforceable in Tennessee, where the note was executed, such contracts, when executed in Kentucky, being treated as absolutely void, because "they are agreements to pay penalties, tend to oppress the debtor, and encourage litigation."

Fixtures—Removal—Tenant.

The New York Court of Appeals held, in the recent case of Talbot vs. Cruger et al., that the right of a tenant to remove fixtures erected for trade is conceded to him for reasons of public policy, and, being in the nature of a privilege, it must be exercised before the expiration of the term or before he quits possession. The court said: "This appeal must be determined by the question of whether the plaintiff had any property in the buildings upon the land, and for that we are limited to the case. They consisted in a house, shed, closet and fence, and under the general rule would partake of the incidents and properties of realty. That is the general maxim of the law, and if there be an agreement with the owner of the land by which the tenant's distinct ownership of the buildings is recognized and his right to remove them conceded, it must, of course, be proved by him. The legal presumption based upon the rule must be disproved by affirmative evidence on the part of the tenant. * * * If the right to remove other fixtures exists by virtue of some agreement, then it must be exercised in like manner. By entering upon a new lease in which the tenant's rights are not reserved, the rights which may have existed under the former tenancy are determined, and this is true even where there is a continuous holding of the premises, but not under the same lease. A tenant may remain in possession after the old lease has expired, but unless he reserves the right under the new lease to remove the fixtures upon the land, the right will be deemed to have been abandoned, and they will become the property of the landlord."

Partnership—Note—Authority—Jury.

The Supreme Court of Minnesota held, in the recent case of Vetsch vs. Neiss et al., that a firm carrying on the business of boring wells, buying materials for pumps and windmills, putting these materials together, and then placing these articles into wells bored by the firm, or already bored or dug by other parties, cannot be held as a matter of law to be a trading copartnership, each member having implied authority to borrow money for the use of the firm and to execute and deliver negotiable paper therefor; that whether one member of a partnership can bind his partners by making promissory notes in the firm name is a question of authority to execute the note, and is not to be determined by simply ascertaining for whose benefit the note was made; that the authority to borrow money for the use of the firm and to execute negotiable paper therefor may be implied from the nature of the business according to the usual course in which it is carried on, or as reasonably necessary or fit for its successful prosecution; or if it cannot be found in that, it may still be inferred from the actual though exceptional course and conduct of the business of the partnership itself as personally carried on with the knowledge, actual or presumed, of the partner sought to be charged, and that in all cases where the court cannot hold as a matter of law that the firm is a non-trading coparnership, and that its members cannot bind the firm by the execution of promissory notes without the knowledge and assent of all of its members, and the question arises as to the authority, it is for the jury to say what the nature of the business in each case is, what is necessary and proper to its successful prosecution, and what is involved in the usual and ordinary course of its management by those engaged in it, and to ascertain and determine whether the transaction in question is one which those dealing with the firm had reason to believe was authorized by all of its members.

BUSINESS NOTES.

Aluminium as a Conductor of Electricity.

The *Engineering and Mining Journal* says: "The new plant of the Pittsburgh Reduction Company at Niagara Falls, known as the 'Lower Works,' located on the high bank of the river below the falls, has been started up. The starting up of this new plant inaugurates the first use in an extended way of aluminium rods as conductors of electricity. The Pittsburgh Reduction Company resolved to use aluminium rods or cables instead of copper for conducting the current from the generators in the power-house down in the gorge, some 200 feet, to the plant on top of the bank. These rods are each three-eighths of an inch in diameter and 350 feet long from the generators to the main line in the furnace room. These main line conductors, which traverse the pot room, are from twelve to sixteen inches wide and one inch thick, and are also of aluminium."

Cost of Making Incandescent Lights.

United States Consul Norris, at Ghent, has reported an interesting fact to the State Department regarding the manufacture of incandescent lamps. It is that the most expensive product in the world is the charcoal thread employed in the lamps to furnish the light. This will be interesting news to the people who use electric light nightly without being cognizant of such a proximity of wealth. It is, for the most part, manufactured at Paris and comes from the hands of an artist. This product is sold at wholesale by the gramme, and, reducing this price to the basis of pounds, it is easily found that the filaments for lamps of twenty candle-power are worth $8,000 per pound, and for the lamps of thirty candle-power the fabulous sum of $12,000 per pound. The former have a diameter of twenty-thousandths of one millimeter, or 7,874-ten-millionths, and the latter less than one-fifth of this size.

English Cereal Crops of 1896.

The London *Times* says: "The official table of the Board of Agriculture shows the total produce and yield per acre of wheat, barley and oats this year, as based upon estimates furnished through the agency of collectors of inland revenue:

ESTIMATED AVERAGE YIELDS OF CEREAL CROPS PER ACRE, 1896.

	Bushels		
	Wheat.	*Barley.*	*Oats.*
England	33.88	33.64	37.60
Wales	22.95	26.21	29.71
Scotland	38.47	37.14	37.13
Great Britain	33.68	33.63	36.83
Great Britain, average ten years, 1886–95	28.81	32.68	38.23

When we turn to the absolute produce as revealed by the official estimates, the following table affords a comparison of this year's crops with those of the five immediately preceding years:

ESTIMATED TOTAL PRODUCT OF WHEAT, BARLEY AND OATS IN GREAT BRITAIN, 1891–96.

	Bushels		
Year.	*Wheat.*	*Barley.*	*Oats.*
1891	72,126,263	72,129,095	112,386,261
1892	58,560,932	70,484,597	116,294,989
1893	49,247,297	59,535,377	112,887,379
1894	59,172,801	72,295,066	135,462,931
1895	37,176,257	68,650,945	122,148,628
1896	57,052,952	70,774,776	114,015,907

Pig Iron Production Increased.

A considerable increase in pig iron production in the United States took place during November. The total number of furnaces in blast has been increased from 133 on November 1 to 147 on December 1, and the total capacity per week of these furnaces in gross tons has increased during this time from 124,077 to 142,278. This increase in pig iron, although perhaps not as great as was generally expected, is still very marked over that of September and October. Some of the more important furnaces which were blown in during November are: The new Niagara at Tonawanda, one Crane in the Lehigh valley, one Edgar Thomson and Clinton at Pittsburgh, four in the Shenango valley and three in the Mahoning valley. The Illinois Steel Company stopped one furnace at the new South Chicago plant, and two at the old South Chicago works. The following table has been compiled from figures taken from the *Iron Age*, and shows the general location and condition of all the furnaces in the country on December 1:

Location of furnaces.	*No. of stacks.*	*No. in blast.*	*Capacity, week, tons.*	*No. out of blast.*	*Capacity, week, tons.*
Pennsylvania	186	66	75,057	120	75,167
Ohio	55	21	18,199	34	18,303
The south	117	39	30,528	78	35,775
Other districts	106	21	18,494	85	40,660
Totals	464	147	142,278	317	169,905

Tennessee Centennial Exposition.

The *American Manufacturer* says: "The Tennessee Centennial Exposition, which is to be held at Nashville from May 1 to November 1, 1897, is attracting considerable attention, as it promises to be one of the most important exhibitions of southern progress yet made. The grounds upon which the buildings are to be erected comprise a park of some 200 acres, lying two miles west of the state capital. Over $100,000 have been expended on the improvement of the property in the past few years, and from its elevated plane a fine view of Nashville is afforded. Work on the main buildings was begun last January. Those that are now under roof are the Parthenon for the fine arts; the Commerce Building, 500x315 feet; the Minerals and Forestry Building, 400x125 feet; the Transportation Building, 400x120 feet; the Agricultural Building, 525x175 feet; the Auditorium, seating capacity 6,000; the Woman's Building, 160x85 feet, and the Administration Building, where the executive offices are located. It is announced that the management is making every effort to present an attractive display, and the best exhibits in each class are solicited. No charge is to be made for a reasonable amount of space for exhibits in any of the buildings, but each exhibit offered will be subject, for acceptance or rejection, to the committee on classification, with the approval of the director-general, composed of the heads of the departments. Those who wish to learn more of this interesting enterprise should address Director-General E. C. Lewis, Nashville."

The Decline in Petroleum.

The *Oil, Paint and Drug Reporter* says: "Producers of petroleum are confronted with dollar oil for the first time since January, 1895. The low prices ruling previous to that date caused curtailment of development work in the fields, and since then the market has been gradually influenced by limited supplies. The price of crude oil at the opening of the present year was $1.48, and producers were encouraged to pursue drilling operations on a larger scale. For months the receipts from wells have exceeded the shipments. Small wells, which had been abandoned during the era of low prices, were reopened and cleaned out. Considerable old territory is still operated, but the work will have to be suspended if the market remains below the dollar mark, as small wells are unprofitable. The opening of new territory will be postponed for the same reason, and it is only a question of time when increasing consumptive requirements for refined petroleum from abroad will exceed production and cause a higher level of prices. There is no danger of the earth's supply being exhausted for many years. In addition to southern and Pacific coast fields, there still remains a vast territory in West Virginia and southeastern Ohio which has not been tested, but promises to give a bountiful yield. In the interior West Virginia territory some of the wells recently drilled are flowing at the rate of 300 to 600 barrels per day, but the old-time gushers are rare. The market price will continue to regulate production, as the day for artificial support through combinations of producers has gone."

Available Wheat Supplies.

Dornbusch's *Cargoes List* (London) says: "After making allowance for possible tightness of supplies in this cereal campaign, it will be well to bear in mind that the unexpected always enters largely into every estimate, and a range of prices over 30/ may be likened unto a commercial Pied Piper of Hamelin, whose piping will attract not rodents nor children, but wheat from holes and corners where its existence was least expected. To some extent this has already occurred, and although no large contributions may come to us from minor exporting countries, the contingents may prove sufficient to turn scarcity into competence. The following statement of imports into United Kingdom in first three months of the cereal year present and past is useful. Analysis of wheat and flour imports in September, October and November in 1896 and 1895:

	Quarters	
	1896.	1895.
United States: Atlantic ports and Canada	3,480,116	2,265,106
Pacific ports	215,926	760,028
Russia	726,879	1,179,360
India	79,487	622,293
Germany and Austria	234,660	266,645
Danube and Turkey	703,234	283,906
Australasia	....	94,896
Argentina	78,307	358,866
Chili	179,106	48,536
Other countries	262,200	198,438
Totals	5,960,915	6,018,174

The remarkable expansion of supply from Atlantic ports contrasts with the falling off in receipts from North Pacific ports. Russia has shipped almost as much as was sent out last year, but the United Kingdom so far has received only the above quantity. The shrinkage in India's contribution must be passed over in silence, out of respect for fallen greatness. Germany has sent us an unusual, although small, quantity of wheat, and the increased receipts from other countries are evidence that the 'cotchels' swell the aggregate."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The arrival of the holidays, the close of the year and the period of annual stock-taking have further checked the volume of wholesale business. Only filling-in orders are being received and trade is slow. Retail demand for holiday goods has been active, but it is for cheaper grades than in previous years. In other lines the distribution of merchandise has been smaller at a number of distributing centers. Failures of important banking institutions at northwestern cities tend to unsettle confidence in commercial and banking circles. Very few salesmen remain on the road, but most of them are preparing to go out within a fortnight.

The moderate trade revival which followed the last presidential election has been disappointing, in that, aside from the Christmas demand, business has been more unsatisfactory for a month past than at a corresponding period in many years. The confidence with which merchants and manufacturers have been looking forward to the arrival of the delayed trade revival early in February next is less pronounced than it was, while the prospect for legislation next spring and summer looking to tariff revision, and congressional anxiety to take charge of affairs abroad, is more than likely to put off a permanent revival in business here until next fall.

The shake-up in the iron and steel prices is nearly complete, and quotations for Bessemer pig iron and for steel billets have gotten down to the level of those for other staples. The break last week precipitated speculation in Bessemer pig iron and billets, and large purchases for an advance and for consumption have been made—more than 300,000 tons of billets—some of it as low as $15, a drop of $5 a ton. The billet pool has been patched up, nominally. Bessemer pig, which went off to $10.50 on the break and on the prospect of a readjustment of costs, is firmer, and has sold at $11. Anxiety is felt in the iron and steel trade as to the uncertainty of the price of lake ore under the new combination to control that staple. A Pittsburgh concern is shipping 2,000 tons of sheet bars to the United Kingdom, and southern pig iron furnaces report further sales in England. Sheet and tinplate bars have sold down to $16.50. Rails are firm at $25, but that does not show the shrinkage suffered by billets. Freer receipts of cotton tend to encourage high crop views and account for the reaction in price. Lard and petroleum are also lower. Unchanged quotations are reported for wheat flour, sugar, pork and coffee, as well as for print cloths, although heavy stocks of the latter are having a depressing effect on the market, and are likely to cause a restriction of output in the near future. Prices for hides are higher, as are those for wheat, corn and oats. On the Pacific coast the principal activity in commercial lines appears to be in exports of wheat and flour, together with general merchandise to Japan and Central America.

A recovery of the New York speculative stock market from the depression caused by the Cuban resolutions at Washington was natural, in view of the subsequent developments in that connection. The slight effect on prices of the western bank failures and the somewhat stronger tone that has since appeared seem due to the ease of money and the failure of the events in question to produce anything beyond local liquidation in Chicago. The New York market at the end of the week is firm, with an inactive holiday spirit manifest. Foreign exchange is steady at 4.87 for demand sterling.

Manufacturers of wool have not opened heavyweight samples yet, and are not inclined to buy raw materials except to complete orders in hand. Some Massachusetts mills have booked fair spring orders, but the industry in Rhode Island does not appear to be so well situated, and two large mills expect to shut down soon. There are 327 business failures reported throughout the United States this week, 32 less than last week and 11 more than in the corresponding week a year ago

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,111,702 bushels, against 3,524,000 last week, 3,457,000 bushels in the week a year ago, 1,814,000 bushels in the week two years ago, 2,036,000 bushels three years ago, and as compared with 2,917,000 bushels in the corresponding period of 1892. Exports of Indian corn this week hold up well, the total amounting to 3.179,000 bushels, as compared with 2,814,000 bushels last week, 1,839,000 bushels in the week one year ago, and with very much smaller totals in like weeks in three preceding years.

Toronto merchants report trade quiet in wholesale circles and stock-taking in progress, with a fair demand for the season. Montreal merchants report disappointment at the results of annual stock-taking. Dry goods merchants have not been as successful as expected, with bad debts, low prices, heavy expenses and competition. Grocery and hardware jobbers have done fairly well. The situation of woolen interests are not satisfactory. There are 45 business failures reported throughout the Dominion of Canada this week, against 39 last week and 30 in the week a year ago.

FINANCIAL.

The Money Market.

More or less interest was shown during the early part of the week in the possible influence of the western bank failures upon the New York loan market. Considerable shipments of currency were made by institutions here to their Chicago correspondents, estimates of the amount being as high as $4,000,000. In the present plethoric state of the local bank reserves, the circumstances in question had no influence whatever upon the market, nor did the disasters and pressure at the western cities seem to exercise any effects of a tangible character. Some scattering demands for money in connection with the end of the year and the January 1 disbursements may be noted, but apart from this the market generally presents a holiday appearance. Mercantile paper is exceedingly quiet, with a moderate supply and somewhat less active buying demand. The latter fact is due to the withdrawal from the market for the time being of some institutions which a short time ago had been buying liberally. Quoted rates for indorsed bills receivable and best city names are 4@4½ per cent. Time money is inactive and the supplies little, if anything, smaller. Stock Exchange borrowers have generally provided themselves for all purposes connected with the turn of the year, and quoted rates are 3½ per cent. for short and 4 per cent. for long arrangements. Money on call has been quoted throughout the week at 1½@2 per cent., with an abundant supply.

The New York Banks.

The changes in the bank averages for the week ending last Saturday showed smaller changes than even those of the preceding week. Specie increased $600,000, and there was a further gain of $2,800,000 in legal tenders, making a total increase of $3,400,000 in cash holdings. This would show that the flow of funds from the interior continued during the week, though upon a somewhat reduced scale. In a similar manner, the further augmentation of the average loans by $3,300,000 points to further operations in connection with foreign exchange, while the gain of $6,900,000 in deposits is a sufficiently accurate reflection of the above changes in loans and cash. As a result of the other changes, the surplus reserve increases, $1,600,000 the figures of the statement comparing as follows with those of the preceding week:

	Dec. 12, '96.	Dec. 19, '96.	Changes.
Loans	$483,503,500	$487,016,000	Inc. $3,512,500
Specie	76,648,100	77,251,600	Inc. 603,500
Legal tenders	84,199,500	86,920,600	Inc. 2,811,100
Deposits	516,605,000	523,589,900	Inc. 6,984,900
Circulation	19,847,400	19,797,100	Dec. 44,200
Total reserve	160,757,600	164,172,200	Inc. 3,414,600

Silver.

The silver market has been dull and featureless this week. The position of India exchange has been affected by the fact that the Council will issue £1,500,000 in bills on January 1. Prices for bars have been almost stationary, though within the last few days an advance from 29⅞d. per ounce to 30d. was recorded in London, the New York figure advancing in sympathy from 65¼c. to 65⅜c.

* Holiday.

Foreign Exchange.

The appearance of a better supply of commercial bills and a decreased inquiry for remittances were responsible early in the present week for renewed weakness in exchange rates. The decline was not of a pronounced character, but was sufficient to end all question of gold shipments to Germany which, as stated in BRADSTREET'S last week, were expected to be made by Tuesday's steamer. Posted rates were reduced ½c. for demand sterling—to 4.84½@4.88—and actual business in demand, which at the end of last week was quoted 4.87½@4.87¾, declined by Tuesday to 4.87, there being very little activity at that level. The market was unaffected by the financial troubles at the west, though that alone could have been expected from the entire absence of any disturbance in connection with the money market here. Reichsmarks, it tmay be noted, declined in sympathy with sterling, the rate for demand bills in Berlin, which was 95¾c. a week ago, falling to $95^{11}/_{16}$.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Dec. 19.	Dec. 21.	Dec. 22.	Dec. 23.	Dec. 24.	*Dec. 25.
4.84½ @ 4.88½	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	---- @ ----

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.87½ @ 4.87½	4.87⅛ @ 4.87¼	4.87 @ 4.87	4.87 @ 4.87	4.87 @ 4.87	---- @ ----

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83¾ @ 4.84	4.83½ @ 4.83¾	4.83½ @ 4.83½	4.83½ @ 4.83¾	4.83½ @ 4.83¾	---- @ ----

* Holiday.

Closing quotations on Thursday for actual business in other class of bills were: Cables, 4.87½@4.87¾; commercial bills, 4.82½; francs, 5.19⅜@5.17½; reichsmarks, $95^{1}/_{16}$@$95^{11}/_{16}$.

The Bank of England discount rate remains at 4 per cent. The bank this week lost £1,413,000 in specie, and its reserve is 48.38 per cent. of the liability, against 52.87 per cent. last year. Call money in London is 3½@4 per cent., and open market discount 3¾ per cent.

The exports (exclusive of specie) from New York to foreign ports for the week ending December 22 were $2,133,736 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$10,532,876	$6,822,000
Previously reported	374,082,888	336,904,541
Since January 1	$384,615,764	$343,726,541

The following table shows the imports (exclusive of specie) at the port of New York for the week ending December 18, 1896:

	1896.	1895.
Dry goods	$1,596,813	$2,275,118
General merchandise	5,768,155	5,311,019
Totals for the week	$7,364,968	$7,586,737
Previously reported	431,683,255	499,934,345
Since January 1	$439,048,223	$507,521,082

THE STOCK MARKETS.

The New York Stock Market.

A rapid recovery followed the depression in stock values at the end of last week. The street quickly realized that the situation created by the Senate Foreign Relations Committee, in giving a favorable report to the resolutions acknowledging Cuban independence, lacked the gravity of the Venezuela matter a year ago. London failed to show any fright, and buying from that quarter was supplemented by large purchases to cover short contracts, so that on last Saturday the market regained more or less of the ground it had so rapidly lost on the break of Friday, the 18th inst. The current gossip ascribed no small portion of the bear covering to Washington interests, which naturally tended to diminish the fears that the Cuban resolutions would lead to serious action, and the fact that the Senate itself on Monday laid them over till after the holiday recess, together with indications that the House would fail to concur in the proposed action, deprived the matter of significance.

The market consequently tended to improve still further during the earlier portion of the week on continued short covering, and on the belief that the adjournment of Congress for a two weeks' recess would afford opportunity for a speculative discounting of the investment demand and improvement in business that is looked for after January 1. This disposition was, however, checked by the development of banking troubles in the west, including the failure of the National Bank of Illinois at Chicago and of the Bank of Minnesota at St. Paul, both institutions bringing down with them a number of minor banks and firms in their respective vicinities. The disturbance in the financial situation at Chicago had, however, little or no influence here, as

the superabundant supply of funds enabled the New York banks to render all needed assistance to their Chicago correspondents without in any way curtailing their own loans, and while speculative interests at Chicago are naturally threatened, the fact that their activity had been confined to local enterprises and was almost entirely based on local capital prevented the influence from extending to this center. Prices were therefore only slightly affected, and at the end of the week the market assumed a dull holiday appearance, the chief activity arising simply from the desire of professional traders to close up contracts and stand clear of the market over the three days' holiday, which results from the closing of the Stock Exchange on the Saturday after Christmas. As there is a considerable short interest outstanding, this tendency resulted in considerable covering and gave a tone of strength to the concluding transactions of the week.

Europe bought stocks on the break of Friday of last week, but with the recovery of prices here its interest in our market ceased. The firmness of money in London is an obstacle to any speculative activity there. The idea is entertained that easier interest rates will prevail in London after January 1, and that this will facilitate the development of a better feeling and increased activity in "Americans." As pointed out elsewhere in this issue of BRADSTREET'S, there is reason to fear that the improvement in the London money market will not materialize for some time after January 1. It is to be noted that exchange rates here eased off materially early in the week, and that the opportunity for the shipment of gold to Germany has consequently entirely disappeared.

The investment market has been firm, but shows a somewhat duller condition. High-grade bonds are, however, firmly held, and the influence extends in a measure to the more speculative classes. The chief incident in this department was the sale on Tuesday of $1,000,000 government 4s on the Stock Exchange, the price declining from 120 to 119. The transactions in question were currently believed to be for the account of a Chicago institution, and after its effects were over the price of the United States 4s rose to 119¾.

The principal features of the market were again Sugar and Burlington. The former stock, after breaking to 108 on Friday week, rallied to 111 by Tuesday on covering of shorts. Washington speculators were credited with a great deal of this buying, and it was stated that the opinion there is that the present Congress is very unlikely to do anything that could affect the sugar-refining interest. The stock thereafter fluctuated between 109¾ and 110½, and manipulation in it was of an undecided character, owing to the uncertainty about the effect of the steps the sugar company's leading supporters have apparently taken to enter into competition with the largest coffee concern in the country. The other industrials were neglected, though National Lead was the object of some selling, and United States Rubber common rose from 24 to 25¾ on the declaration of a 2 per cent. dividend.

Burlington's course in the market was determined largely by the short interest in it. The stock rallied from 68½ to 73½ and receded to 70, closing for the week at 70¾. St. Paul was favorably influenced by the comparatively small decrease in its latest weekly gross earnings, rallying to 73¾, but receded to 72¼ on the western bank troubles. Speculation in Reading securities has been timid, owing to the fact that a decision of the attorney-general of Pennsylvania upon the question of the charter is expected in a few days. Delaware & Hudson has been unfavorably affected by rumors that the falling off in earnings this year may result in a reduction of dividend rate (now 7 per cent.), which will be fixed by the directors at a meeting to be held next month. The reduction of the dividend or the half year on Canada Southern from 1¼ to 1 per cent. caused a decline in that stock from 48 to 45½, and deprived the regular dividends of the other Vanderbilt properties of influence; in fact, the sale of a large block of New York Central on Wednesday was attributed to an investment interest. Long Island was again the object of mysterious selling, under which the price declined from 48½ to 42.

Boston Stock Market.

The market shows an easier feeling, particularly for railroad stocks. Atchison closes ¼ lower, with Chicago, Burlington & Quincy 4⅞ off and considerable trading in the latter. Mining stocks hold up well, the decline in Boston & Montana being ⅞, with Butte & Boston ½ lower. General Electric closes ⅞ lower, and Sugar has sold down 3⅛. Bay State Gas closes ⅜ lower, but United States Leather preferred closes 1¼ higher.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending			
	Price Dec. 23, 1896.	Price Dec. 17, 1896.	Sales Dec. 23, 1896.	Sales Dec. 17, 1896.

BETWEEN SEASONS.

AN EXCEPTIONALLY SMALL VOLUME OF TRADE AT THIS SEASON, EXCEPT AT RETAIL FOR CHRISTMAS SPECIALTIES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, December 24.—The market for most kinds of merchandise has ruled quiet, the approach of the holidays and the turn of the year being unfavorable to general business. The money market continues extremely dull, with a very limited demand. Call money is quoted at 2@2½ per cent., with time money at 3½@4 per cent., according to dates, while corporation notes sell at 3½@4 per cent. and business paper at 4@4½ per cent. The boot and shoe market continues quiet as far as new business is concerned, but the factories are quite well supplied with orders ahead. Leather is quoted firmer, with quite free purchases of sole leather. Hides are ½c. higher but quiet. Lumber moves slowly, but the tone of the market is quite firm on spruce.

Providence, December 24.—General business does not improve. The unsatisfactory condition of woolen manufacturing is further emphasized by the suspension during the current month of two Rhode Island concerns engaged in the industry.

Philadelphia, December 24.—Wool continues quiet and without change. Manufacturers of upholstery goods are fairly busy, but textile industries are comparatively quiet and the demand for yarn is light. Dry goods jobbers are doing a moderate trade. Leather and hides are dull, but prices are steady, and some improvement is noticeable for better grades. Boots and shoes are in fairly active demand and the market continues firm. The weather has had a depressing influence on lumber, and the demand is light. Immediate wants in tobacco have been covered, and orders are being taken for January delivery; prices keep advancing as Havana grows scarcer, and domestic goods are feeling the elevating effects.

Pittsburgh, December 24.—General business has been dull except in retail lines. There is a fair demand for staples and prices are well maintained. Buyers are making but few wholesale purchases, and what little they do buy is for present needs. There has been some business in iron, but the unsettled condition of the steel market has had the effect of retarding sales in that line. The billet pool is announced to have been reconstructed on former lines, which may have the effect of advancing prices a little. It is the opinion that general business conditions will not permit of an advance to former pool prices.

Baltimore, December 24.—This week has been very quiet in all branches of trade. Stock-taking has commenced, and but very few orders are being received, and those mainly of the filling-in sort.

West and Northwest.

Cleveland, December 24.—In other than groceries and some leading staple lines, jobbing business continues light, no general improvement being looked for until the orders for spring deliveries set in, in which respect the feeling is a hopeful one.

Cincinnati, December 24.—Business is light; collections difficult.

Detroit, December 24.—In jobbing lines trade is fair for the season. Steady seasonable weather is having a beneficial effect upon retail trade, dealers in holiday goods reporting a generally satisfactory movement.

Chicago, December 24.—Retailers have had an active week in holiday goods, but business with jobbers has been slow. They have made no effort to secure orders for immediate delivery, as salesmen are in from the road, and the time has been spent in taking the annual inventories. Sales have dropped off and are only in small lots. Orders for spring dry goods, clothing and shoes are being placed satisfactorily, but heavy buying is not generally looked for. A good deal of contingent business is in sight for the pig iron and steel manufacturers for next year, but spot orders are scarce and the situation is without change, except that some brands of southern pig irons are weaker. Northern irons, however, are firm, with light sales. Large orders are here for yellow pine for delivery within the next six months, but sales of white pine are light. The produce business is slow, except for poultry, which is active at good prices. Wool receipts, 169,216 pounds. The failure of the National Bank of Illinois, with over $12,000,000 deposits, has made business with banks active in opening new accounts. Clearing House banks are advancing 75 per cent. on receivers' certificates to help the depositors out. The failure of three private banks has created an unsettled feeling, but the worst is believed to be over. Collections are rather slow.

Louisville, December 24.—Jobbing trade is quiet, incident to the holiday season. The usual activity with retailers is noted. Leaf tobacco is active and sales large, with satisfactory prices. Collections generally are good.

St. Louis, December 24.—The week's business has been an average one for the season, and is satisfactory when expectations are considered. Dealers in holiday goods say that while prices are lower and a cheaper class of goods are being sold, the volume is larger than last year, and net profits are about equal. Purchases of necessities are largely confined to sorting-up orders by mail. Pig iron and iron and steel are quiet, without change of prices, but considerable figuring is going on for next year's business. Hides are selling fairly well at full quotations. Lumber is moving slowly. The demand for coal, both hard and soft, is increasing at better values.

Kansas City, December 24.—Jobbers and retail dealers report slow trade aside from holiday demands. Collections are a little better. Live stock receipts are liberal, with good values.

Milwaukee, December 24.—Trade has been quite disappointing, but merchants are expectant of a fairly active spring business. Collections continue slow.

Minneapolis, December 24.—General business is quiet and holiday trade not up to that of previous years.

Omaha, December 24.—Holiday trade is dull, the demand being for cheap grades of goods. Collections are dull.

Sioux Falls, December 24.—Holiday trade has been very good. Wholesale trade in general lines is quiet. There is no complaint as to collections, but they are not as easy as a short time ago.

Southern Cities.

Charleston, December 24.—Retail trade is good. Wholesalers in all lines state trade is quiet. Collections are about same.

Savannah, December 24.—Wholesalers report

Exports wheat all points outside of Europe, 244,722 bushels; corn, 56,367 bushels; flour, 13,903 barrels; oats, 14,841.

good sales of small articles, with slow collections. Christmas shopping makes large retail trade. Naval stores receipts and shipments have increased. A decline in prices is noticed on higher grades of rosin.

Atlanta, December 24.—There is a slight decrease in sales of drugs, dry goods, heavy groceries and hardware. Sales of liquors, fruits and confections are heavy on account of the coming holidays. Collections are good.

Augusta, December 24.—Wholesale trade is practically at a standstill this week, but salesmen are preparing to go on the road immediately after Christmas. The usual holiday business is active and up to former years.

Jacksonville, December 24.—No change is noted in general trade.

Nashville, December 24.—There has been a large retail holiday trade. The week's activity in jobbing lines is mainly with grocery, dry goods and shoe dealers. Trade is seasonably quiet. Country collections are good.

Memphis, December 24.—General trade is fairly active, especially in Christmas novelties. Collections are fair.

New Orleans, December 24.—Business has shown no improvement except in holiday and fancy goods. The volume of trade in cotton has fallen off, owing to the approach of the holidays. Sugar is active, rice dull. No movement in local securities is noted.

Galveston, December 24.—Interest in all lines of trade is now centered upon holiday goods, and jobbers report little demand for other goods. Holiday business among retailers is reported unexpectedly active.

Pacific Coast.

San Francisco, December 24.—Commercial lines are quiet. Export trade is at a standstill, but retail trade is fairly active. Fruit is in good demand and prices are firm. The produce market is dull. Collections are slow.

Portland, December 24.—Retailers of dry goods and kindred lines report business comparatively good, and in some instances there is an improvement over last year. Wholesale trade with the country is fair and shows a betterment over last month, but city business is less satisfactory. Collections generally are somewhat easier but slow.

Seattle, December 24.—General trade is very fair and shows considerable increase over the same week last year. Large shipments of general goods left on the 22d for Japan, and also for Central America.

Tacoma, December 24.—General trade is up to expectations, and is somewhat improved over that of last year. There is a prospect of some new industries being established here after the first of the year.

Canada.

Toronto, December 24.—A quiet trade in wholesale circles is reported this week. Many travelers were kept in and stock-taking is in progress. Demand, however, is fairly good for seasonable articles. Payments are fair.

Montreal, December 24.—As the results of annual stock-takings are coming out, there seems to be a feeling of disappointment at the net results. In the dry goods trade the losses by bad debts have been rather below the average, but low prices, heavy expenses and keen competition have been the causes of loss. Grocery and hardware jobbers have done fairly well. Collections are slower than usual, and a rather depressed feeling is noticeable as the year closes. Recent developments have shown the woolen textile interests to be in an unsatisfactory condition. The holiday trade is up to the average.

Halifax, December 24.—There is no change in trade circles. Retailers report the holiday trade so far fairly good. Collections are slow.

Dry Goods.

The tone of trade is slow in most departments of the market, although an active retail movement in holiday goods has been noted. Preparations for the new year are being made. Cotton fabrics are quoted dull, and the outlook is unsatisfactory to manufacturers. The surplus of print cloths on hand is large, and this has a depressive effect on other cottons. Production is yet kept up full, but it looks as though the mills would be obliged to curtail the make for a period in order to make a market for the goods on hand. Printed fabrics for spring are being freely shown by card and fairly ordered. Ginghams are quiet. Dress woolens are quiet, but the mills have booked very fair spring orders as a rule. Men's-wear woolens are slow. Heavy-weight samples for next fall are being shown, but as yet orders are light.

Wool.

The market is quiet, with demand light. Manufacturers have done little as yet in opening samples for heavy weights, and they are not disposed to purchase wool until they get their orders for goods. The supply of territory wools on the market is liberal, but holders are maintaining values very steadily. The feeling is that the country will want a large quantity of goods the coming year, and if our manufacturers get the trade they will want all the wool available to make them up. Fleece wools are in light supply at the seaboard and held strong at interior points. This keeps values steady, although the demand is quiet. Australian wools are firm, with fair purchases recorded. Arrivals have been large the past week, the wools purchased at London coming in freely. Carpet wools are quiet but steady.

STATISTICS OF NATURAL GAS PRODUCTION.

The following is condensed from a paper by Joseph D. Weeks in Dr. Day's "Mineral Resources" for 1895: "No statement as to the actual production of natural gas in cubic feet has been obtained, nor is any obtainable. Certain wells have been measured, and the production of these wells for a brief period has been ascertained, and from this production an estimate of the total production of these wells and of the field in which they are located has been determined. But it is evident that this is only an estimate concerning which it is impossible to say that it is even approximate. The production of a well varies not only from month to month and week to week, but from hour to hour, so that what would be a fair estimate of the production for a given minute would not be at all a correct estimate for an hour later.

"On the basis of the best information obtainable the conclusion is reached that the total value of natural gas consumed in the United States in 1895 was $13,006,650, as compared with $13,954,400 in 1894 and $14,346,250 in 1893.

"The following table, which we have ourselves compiled from Mr. Weeks' paper, gives the total value of natural gas consumed in the United States from 1886 to 1895, by states:

Years.	Pennsylvania.	Ohio.	Indiana.	Other states.	Total's.
1886.....	$9,000,000	$400,000	$300,000	$312,000	$10,012,000
1887.....	13,749,500	1,000,000	600,000	468,000	15,817,500
1888.....	19,282,375	1,500,000	1,320,000	527,500	22,629,875
1889.....	11,593,989	5,215,669	2,075,702	2,221,739	21,107,099
1890.....	9,551,025	4,684,300	2,302,500	2,254,900	18,792,725
1891.....	7,834,016	3,076,325	3,942,500	647,243	15,500,084
1892.....	7,376,281	2,136,000	4,716,000	572,433	14,800,714
1893.....	6,488,000	1,510,000	5,718,000	630,250	14,346,250
1894.....	6,279,000	1,276,100	5,437,000	962,300	13,954,400
1895.....	5,852,000	1,255,700	5,203,200	695,750	13,006,650

"The value of natural gas consumed was greatest in 1888, when it amounted to $22,629,875. From that time to 1891 the decrease in value was rapid. Since 1891, however, it has been quite gradual.

"The total number of wells producing natural gas on December 31, 1895, was 3,826, as compared with 3,537 on December 31, 1894. Pennsylvania had 1,643 producing wells in 1895, as against 1,537 in 1894; Indiana 1,336 against 1,146; Ohio 495 against 498; and 'other states,' embracing New York, Kentucky, California, Kansas, Illinois, Missouri, Texas, and Arkansas, 352 against 356. In all the states above enumerated the total number of feet of pipe laid on December 31, 1895, was 43,830,241.

"During the year 1895 there was no important extension of the gas-producing fields in Pennsylvania. The most important feature in that state, in 1895, has been the continuation of the reduction of pressure and the shortening of the life of wells. So far as has been ascertained—and it is probably generally true—every locality in the state has exhibited this feature of diminishing pressure and shorter life. The life of a well seldom exceeds two years, and often in six months it is worthless. When wells are well protected by territory—that is, where but few wells have been put down in a large field—not only have they a longer life but the pressure of the wells is maintained.

"No new gas-producing territory was discovered in Ohio in 1895. There is the same story of decreasing pressure of the wells and decreasing production to be told of Ohio as was recorded for Pennsylvania. The decrease in pressure is not so marked, however, and the diminution in the life of the well is not so rapid as in Pennsylvania.

"Notwithstanding the enormous supplies of natural gas in Indiana, and in spite of the fact that its wells have maintained their pressure and production in the last two or three years to a greater extent than those of any other state, both are declining. The reduction in the pressure of wells and in their production seems to vary greatly in different parts of the state. In some cases wells that showed a pressure of 240 pounds in 1894 now show but 80 pounds. The reduction in pressure is from 10 to 15 per cent. a year, but there is still a large quantity of gas territory, and though the pressure declines the production can be maintained by using an increased number of wells."

DISCRIMINATING AGAINST US.

As instancing the antagonistic attitude of Austria to all American articles, Consul-General Max Judd, at Vienna, calls the attention of the State Department to an intended tariff measure preventing further importation of glucose into Austria-Hungary. All producers of glucose in Austria have formed a trust. The market price of syrup has been made by them 21 florins ($8.44) per 100 kilograms (220.46 pounds). This price has enabled American producers to sell their syrup, which is even better in quality, at a lower figure. The trust, seeing themselves undersold, have now urged the government to assist them, and have succeeded in the effort. The duty on glucose or syrup has been six florins in gold ($2.99) on 100 kilograms (220.46 pounds). A new tariff, to go into effect January 1, has now been published, making the duty 15 florins in gold ($7.23). "This rate," says the consul-general, "is on glucose from all countries, but it is aimed only against the United States, for it is only with syrup from our country that the syrup trust (home producers) cannot compete. American syrup is sold, landed in Hamburg, per 100 kilograms at 12.50 marks ($2.97½). The import duty for Austria being also six florins in gold ($2.99) and freight from Hamburg to Austria amounting to about one florin, makes the entire cost of 100 kilograms of American syrup landed in Austria about $6.40 against the trust price of syrup of 21 florins ($8.44). This new duty will at once shut us out from further sale of syrup. It has been this way with other articles for which Americans found a foreign market. If it was not a tariff measure, some other obstacles have crippled their efforts to maintain the trade."

THE BRITISH MINERAL INDUSTRY.

The report to the Home Office on the mineral industry of the United Kingdom, shows that coal mining gave employment in 1895 to 687,371 persons above and below ground; that 16,087 persons are employed at iron mines, and 30,199 persons at other mineral mines. In 1895 there were 189,661,362 tons of coal raised, a slight advance on the figures for 1894; but the value of the product at the mines fell to £57,231,213, from £62,730,179. Iron ore comes next with 12,615,414 tons raised, worth £2,865,709. As with coal, the quantity raised was larger than in 1894; the selling value was less. Lead ore was of higher value in 1895, although the amount raised was less. Tin ore shows a decline under both headings. There were 13,266 tons of gold ore raised, with a value of £16,584. as against 6,603 tons in 1894, worth £13,573. The increase in the amount of coal raised was entirely due to the greater activity in the Scotch mines. But in 1894 nearly all the Scotch collieries were idle for some months in consequence of a strike.

It is an interesting question how long the enormous drain on our coal mines can go on without exhausting the supply. The late Professor Jevons, assuming that the average annual rate of growth of our coal consumption would be 3½ per cent., calculated that by 1970 we should have exhausted the whole available coal in the country. Since 1873, however, the actual output of coal has never been as great as it would have been at the assumed rate of increase. There are, too, other factors in the problem. Sir Robert Giffen has shown that for the finer industries, and with improved manual skill, a small amount of coal will do the full work which, under other conditions, it would need a much larger amount to do, so that a shrinkage in our coal supply and a decline in our industrial progress will not necessarily come together. Nor is it certain as yet what our coal resources may prove to be. In 1895 there were 1,016 fatal accidents in and about the mines and quarries of the United Kingdom, causing a loss of 1,198 lives. There was an increase of 62 in the number of fatal accidents and a decrease of 77 in the number of deaths. In coal mining "falls of ground" cause nearly one-half of all the deaths underground. This form of accident is to a large extent preventable by a more systematic use of timber for support at the working face of the mine. Explosions are also to be set down as largely preventable. The men continue to take pipes, matches and appliances for unlocking safety lamps into the mines, and there are, the report says, mine owners who do not introduce safety lamps where they are absolutely needed, and magistrates who persistently refuse to punish negligence and breach of rule.

THE OLEOMARGARINE INDUSTRY.

The *Oil, Paint and Drug Reporter* says: "The report which the commissioner of internal revenue has just issued upon the oleomargarine industry covers the entire period during which the product has been the subject of internal revenue tax. The act imposing a tax of 2c. a pound upon the product became a law on August 2, 1886, and went into effect on November 1 following. Omitting the eight months of the fiscal year ended June 30, 1887, the statistics given herewith cover the fiscal years intervening since the tax was imposed, and are interesting as indicating the extent of the industry and its fluctuations. The production and total receipts from the tax for each of the years is shown by the annexed table:

	Pounds.	*Receipts.*
1888	34,325,527	$864,140
1889	35,664,026	894,248
1890	32,324,032	786,292
1891	44,392,409	1,077,924
1892	48,364,155	1,266,326
1893	67,224,298	1,670,644
1894	69,622,246	1,723,480
1895	56,958,105	1,409,211
1896	50,853,234	1,219,432

"The amounts withdrawn from factories for home consumption upon payment of the tax during the same period were as follows:

1888	32,489,160	1893	64,463,868
1889	33,863,640	1894	66,096,048
1890	30,797,928	1895	53,686,242
1891	43,215,404	1896	47,741,793
1892	46,915,500		

"As will be seen by the above, this affords the chief outlet for the product, the exports being but little more than 5 per cent. of the production. The exact amount withdrawn for exportation is indicated by these figures:

1888	1,686,192	1893	2,785,488
1889	1,748,952	1894	3,406,680
1890	1,618,392	1895	3,337,476
1891	1,229,112	1896	3,106,200
1892	1,295,772		

"The production and tax-paid withdrawals by districts for the last two years are shown by the annexed table, in contrast with which it is interesting to note that the withdrawals for export are chiefly from the Connecticut district, which furnished fully two-thirds of the entire amount, while the other is mostly from the First Illinois and First Pennsylvania districts:

From July 1, 1894, to June 30, 1895.	*Produced.*	*Withdrawn tax-paid.*
First California	223,398	197,710
Connecticut (a)	9,029,269	6,403,535
First Illinois	31,963,871	31,554,541
Sixth Indiana	653,263	663,642
Kansas (b)	7,189,335	7,110,898
Sixth Missouri	1,013,544	991,327
Nebraska (c)	3,009,830	3,004,230
Eleventh Ohio	1,552,292	1,549,010
Eighteenth Ohio	1,820,199	1,818,903
First Pennsylvania	563,113	342,446
Totals	56,958,105	53,636,242
From July 1, 1895, to June 30, 1896.		
Connecticut (a)	8,644,860	6,396,020
First Illinois	29,172,122	28,591,110
Sixth Indiana	621,455	620,017
Kansas (b)	5,936,533	5,826,112
Sixth Missouri	688,487	700,963
Nebraska (c)	1,611,240	1,609,040
Fifth New Jersey	67,224	62,014
Eleventh Ohio	2,190,753	2,195,686
Eighteenth Ohio	1,743,535	1,736,266
First Pennsylvania	177,025	4,565
Totals	50,853,234	47,741,793

(a) Including the state of Rhode Island. No oleomargarine was manufactured in the state of Connecticut.
(b) Including the Indian Territory and the territory of Oklahoma; but no oleomargarine was manufactured in either of these territories.
(c) Including the states of North Dakota and South Dakota; but no oleomargarine was manufactured in either of these states.

"The stock on hand in factories on June 30, 1896, was 396,404 pounds, an increase of 3,000 pounds as compared with the previous year. A comparison of the fluctuations in the production of oleomargarine with the statistics of the supply of other fats, shows it to be very largely subservient to them, and that its production is closely governed by the consumptive demand, which depends upon the abundance and cheapness of the superior fats. While a business of large volume which is permanent in character has been established, its volume is materially affected by such competing conditions as have prevailed in butter and lard during the past two years. Indeed, a careful study of the statistics of edible fats shows how an abundance of pork and bacon curtails the use of fats in other forms, such as lard and butter and its substitutes."

BRITISH IMPORTS AND EXPORTS.

The London *Times* says: "The Board of Trade returns for the past month are, upon the whole, not unsatisfactory, considering that the working month was 25 days, compared with 26. The imports are valued at £42,502,569, an increase of £3,496,028, equal to 8.9 per cent.; but the exports of British and Irish produce are less by £1,000,480, or 5.1 per cent., and amount to £18,539,853, compared with £19,540,333 in 1895 and £18,083,087 in 1894. The exports of foreign and colonial merchandise are £4,380,431, an increase of £16,361, the shipments of raw cotton, tea and sheep's wool having been larger.

"The increased value of the imports is to be found chiefly in articles of food and drink and raw materials for textile manufactures. Metals and parcel-post imports are also more in value. Animals for food, chemicals, etc., oils, sundry raw materials and manufactured articles are less. Among articles of food and drink all the cereals are more both in quantity and value, wheat and wheat flour together being £965,000 higher. Other substantial increases are found in hams, cheese, eggs, apples and dried currants. On the other hand, canned meats, fresh mutton, butter, rice and sugar show large decreases. The United States sent 2,576,000 cwt. of wheat, of which only 300,000 cwt. came from the Pacific ports, and the imports from the United States of wheat flour amounted to 1,480,000, compared with 931,000 cwt. Germany, Turkey, Roumania, Chili and British North America also sent more wheat. None was landed from Australasia, and only 70,000 cwt. from the Argentine Republic and the British East Indies. The United States and the Argentine Republic sent six-sevenths of the total Indian corn imported. Bacon is again more in quantity, but less in value. The aggregate receipts of dead meat of all kinds were 1,137,000 cwt., compared with 1,109,000 cwt., while the value is £2,108,000, as against £2,212,000. Butter is less in both quantity and value, but cheese is more, owing to a rise in price. The increase in apples is again enormous, their total being 1,406,000 bushels, compared with 589,000 bushels. Cattle show an increase, but sheep are less by 70,000 head. Decreased quantities of sugar, both raw and refined, were landed from Germany, and of raw cane sugar only 1,112 cwt. came from Java, compared with 226,000 cwt. More came from the British West Indies and Guiana, the Philippine Islands and Peru. As in October, more copper was landed, but less of tin and iron. Of oils, olive and petroleum are less in quantity and value. Cotton, hemp and jute were imported very freely, but sheep's wool and raw silk were landed in smaller quantities. The increased quantity of raw cotton is derived mainly from the United States, the value being returned at £4,935,000, compared with £2,762,000. Sheep's wool is again reduced in quantity and value; the decrease in the imports for the eleven months is 75,000,000 pounds. Mohair reached a total of 3,183,000 pounds, and is considerably in advance of last year. Paper-making materials, manures, tallow and wood are each less in quantity and value, but raw India rubber, wet hides and rosin show large advances, both as regards quantity and value. More of linseed was landed at lower prices. Of manufactured goods, woolens, leather and silk are lower in price. Iron manufactures, although less in quantity, are higher in value. Glass, paper, watches and cotton manufactures are higher in values.

"As regards the exports of British and Irish produce, only living animals, metals, machinery and parcel-post exports are in excess of last year, while articles of food and drink, raw materials, yarns and textiles, apparel, chemicals and other sundry articles are lower. The heaviest fall was in yarns and textile fabrics, and amounts to £824,000. More horses and sheep were shipped, but fewer cattle. Beer, although more in quantity, is less in value. Spirits and sugar were more in demand, and of the former Australasia and South Africa took larger quantities. Coal is lower in quantity and also in value, partly because prices are lower. The United States took more sheep's wool, both British and colonial. Of cotton yarn the shipments to Germany and Japan are much below those of last year, but those to the British East Indies show a satisfactory increase. As regards cotton piece goods, the British East Indies, Turkey and Egypt took more, but the shipments to China, Brazil and South America generally show reductions. More of jute piece goods were shipped to the United States and British North America, but the Argentine demand was much below that of last year. The United States demands for linens, woolens and worsted are still so much below those of last year as to materially affect the total exports of each article. Shipments of iron still continue to be satisfactory, pig, unwrought steel and railroad being most in demand. Less of copper was taken, and telegraphic wires are below last year. Textile and mining machinery still continues in good demand. For the past month all articles comprised under the heads of apparel and chemicals exhibit decreases. In the former it appears due to the number of working days being one less, and in the latter reduced shipments to the United States account for the fall. In sundry articles, carriages, including cycles, are at much higher values; paper, too, and seed oil are more in both quantity and value. Earthenware, leather, skins and soap, among many others, show considerable reductions.

"As regards the clearances for home consumption, more was taken of cocoa, foreign spirits and tobacco; but the withdrawals of dried fruits and teas were but little in excess of last year. Less of cask wine was cleared, but more of sparkling."

PROGRESS OF ACETYLENE.

The London *Iron and Steel Trades Review* says: "The method by which M. Raoul Pictet purifies acetylene is based upon the failure of certain chemical reactions when the material is exposed to low temperature. At – 50° C. (– 58° Fahr.) sulphuric acid does not act upon acetylene, but it does act upon the impurities usually found in that gas when made from carbide of calcium; and, therefore, the gas, as it is formed from the carbide, is passed through that acid, which retains the impurities. The purified acetylene is then more manageable and more easily liquified, while its obnoxious odor, its liability to spontaneous ignition (through the presence of phosphuretted hydrogen), and its action upon metals are very largely got rid of, while the light produced is intensely white and bright.

"Speaking of the acetylene light, an English exchange says it is finding its way into print works, dye houses and bleacheries. The coolness of the flame, with its great luminosity, is the chief recommendation, and it is now very simply and easily produced. It is a thoroughly clean, good light for the textile coloring trades, but there is one point worth noting about it. In view of its white light textile colorists have jumped to the conclusion that it will be good for matching colors, whereas, as a matter of fact, it plays as many tricks with shades as the gaslight. Compound shades, viewed in the acetylene light, vary according to the proportion of their constituent colors. A large number of experiments made in this direction by a well-known Scottish colorist prove that, although to appearance acetylene gives a much whiter and purer light than coal gas, the effects are almost identical in color examination.

"*Electricity* remarks that the news has reached it from a reliable source 'that the Niagara Carbide Company, which, by the way, is the parent company of the great acetylene promotion scheme, claims that no one has a right to make, sell or use a machine for the generation of acetylene gas for illuminating purposes in the United States without its permission. In one case they actually threatened the inventor of such a machine with suit if he undertook to make and sell it for that purpose without permission from them. At the same time they informed him that they still had valuable territorial rights to sell.' * * *

"Professor Frank Clowes recently delivered a lecture on the explosibility of acetylene, remarking that the value of acetylene as an illuminant, and the discovery of its ready production from calcium carbide, have led to the manufacture of this gas in some quantity, and acetylene will probably be dealt with in still larger volume in the near future. It becomes, therefore, important to devise methods for detecting its presence in the air, arising from leakage and escape, and to measure the percentage of the gas present at any place. It is also important to know what proportions of the gas, when present in mixture with air, will lead to explosion if the mixture should be kindled. The detection of small proportions of the gas will not be readily effected by its smell when it is prepared in a state of purity; at present the smell is made much more pronounced by the impurities which the commercial gas contains. Further, the smell will not in any case furnish a means of measuring the proportion present in the air."

RAILWAY BUILDING ABROAD.

The Berlin publication *Kuhlow's* says: "The field for railway building which the vast continent of Africa offers seems destined to witness great activity. With an area of 11,500,000 square miles, or nearly four times that of the United States, omitting Alaska, and with a population of 168,000,000, the entire continent has only 8,000 miles of railways, against the 180,000 miles of the United States. But a change is apparent. By the construction of the Uganda Railway—a line 600 or 700 miles long, from Mombasa, on the Indian ocean, inland, to the north shore of Victoria Nyanza—there will be opened to the world's commerce a fertile country swarming with 20,000,000 people.

"Already, too, it is announced that the German government proposes to build a railway from Dar-es-Salaam, a point on the Zanzibar coast some 250 miles south of Mombasa, westward to Victoria Nyanza, with a line also to Lake Tanganyika, lying still further south of the equator. In their preliminary report the promotors of the scheme estimate the probable cost of construction at 41,000 marks per kilometer, but even in circles favorably disposed to colonial enterprise it is pointed out that in Saxony the construction of a light railway of the same gauge (75 centimeters) costs as much as 73,000 marks per kilometer. For many reasons the construction of such a railway in a tropical country would be considerably more expensive, as is proved by the experience of the Congo State, whose railway cost some 140,000 marks per kilometer to build. The entire length of the proposed line through German East Africa would be 1,773 kilometers (1,100 miles), so that the total cost of the undertaking, calculated on the basis of expense in the Congo State, would hardly be less than 250,000,000 marks (£12,500,000). At first it is only proposed to construct 291 kilometers, from Dar-es-Salaam to Mrogoro, at an estimated cost of 12,000,000 marks (£600,000), but the only raison d'être of this preliminary undertaking is the intention subsequently to carry the line through to the lakes Tanganyika and Victoria Nyanza.

"China also is preparing for a railway era. Three lines are, it is stated, already decided upon—from Pekin to Tien Tsin, eighty miles; from Pekin to Hankow, a distance of several hundred miles, and from Shanghai to Loochow, about sixty-five miles. Sheng Taotai, who has been appointed Director of Railways, will probably obtain a concession for the Hankow-Pekin line, and has purchased the Hanyung Iron Works. The edict for the construction of the Pekin-Hankow line was promulgated several years ago, but, on the recommendation of Chang Chi Tung, the Viceroy of the two Hu provinces, from whom Sheng Taotai has purchased the Hanyung Iron Works, construction was delayed. Chang Chi Tung was anxious that no orders should be placed in Europe for the material necessary for that line, declaring that in a few years' time this could be supplied from the above works, which apparently Sheng Taotai expected to be able to utilize. The construction of the Siberian Railway across Northern Manchuria has been agreed to, with a preëmption clause after thirty years. This is the main line of the Siberian Railway to Vladivostok. By virtue of the new agreement the route will be greatly shortened, as the line, instead of skirting the banks of the Amur, will cross that river into Chinese territory and follow a direct line to Vladivostok. Permission to construct a branch running from the main line to Ta-lien-wan through Southern Manchuria has been refused. Corea, the Hermitland, is also to seclude itself no longer.

"The entire capital of the projected railway between Bangkok and Petchaburi, on the east coast of the Malay peninsula, has been subscribed locally by the Siamese. The king will cut the first sod of the new line on January 1 next. Plans are being drawn up for two railways which are to open up German East Africa, partly by connecting the eastern coast with the region of the lakes and partly by running a line along the principal highway of the inland traffic, and giving the governmental headquarters a secure means of communication with the coast. The latter line will start from Dar-es-Salaam in a southwesterly direction across country to Tabora, about a thousand kilometers distant, and thence to the lakes by two different branches. The cost of the railway will be very heavy, owing to the length, the total mileage being 1,700 kilometers from the eastern coast to the lakes. A steamer is to be transported to Lake Tanganyika to put an end to the slave trade in those districts. The discovery of large deposits of coal on the German side of Lake Nyassa will be highly favorable to the enterprise."

CUBA'S PROLONGED STRUGGLE.

The St. Louis *Globe-Democrat* says: "In view of the present condition of Cuban affairs, it is interesting to know that the island of Cuba would have gained its independence at the time of the general revolt of Spanish America, from 1818 to 1830, had it not been for the fact that the Spaniards from Mexico, Central and South America took refuge in Cuba in such large numbers that they constituted the majority of the population, and so Cuba was held when all the rest of the Spanish provinces in the new world were lost. Since 1820 there has scarcely been a decade in which the restiveness of the Cuban population under the Spanish yoke has not manifested itself in insurrection. Various attempts were made by small expeditions from Spanish America, and even from the United States, to aid the Cubans, none of which, however, brought anything but grief to their promoters. In 1868 the oppression by the Spaniards became so severe that the whole island burst into a flame of insurrection, and a guerilla warfare was carried on for ten years, the insurrection being finally broken toward the close of 1878. Several attempts have since been made without success."

BEET-SUGAR INDUSTRY OF FRANCE.

The United States consul at Havre, in a recent report, describes the beet-sugar industry of France. The crop, he says, pays the farmer better than wheat or any other agricultural product, and hence a large acreage is under beets. In 1894 the area was 1,700,000 acres and the production nearly 18,500,000 tons, or nearly 11 tons to the acre. Fifty to 60 per cent. of all this is used for the production of sugar. The experience of French cultivators is stated to be that the cost of growing an acre of beets is £2, omitting the cost of fertilizers, which it is not always necessary to employ. It is said, too, that the leaves and stalks left on the field will furnish much more manure, after they have been fed to cattle, than the beet requires. The bounty paid on sugar exported from Germany has led to less activity in beet-sugar production in France in the last two years. Nevertheless, the total quantity exported in 1894–95 was 186,287 tons, of which 119,139 tons went to England. The advantage of beet cultivation is that there is no waste; every part of the vegetable can be used in one way or another. The pulp, after the juice has been expressed for sugar, is largely eaten by cattle, and is found to be very nourishing. The leaves and stalks, when fresh, increase a cow's milk; when dry they afford excellent winter food. "Altogether, the beetroot, or the residue after the juice has been expressed, supplies, with the leaves and stalks, nourishment for cattle and sheep more abundant, perhaps, than any other forage that could have been cultivated on the land." It is said that the leaves are frequently used for adulterating tobacco. The French experience is that all land suitable for growing wheat will also grow beets; but it is necessary to avoid a soil too compact or containing too much clay. The report enters into some detail in the question of soils, position, manuring (when necessary), modes of cultivation, harvesting and preserving the crop, and a few words are added as to the manufacture of sugar. Something is said, also, as to experiments being made in France, under the authority of the Ministry of Commerce, for obtaining illuminating alcohol from the roots.

INSURANCE.

1850.——1896.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.
